**DISCLAIMER**

This user's manual is meant to assist users in installing and setting up the system. The information contained in this document is subject to change without any notice.

**CE NOTICE**

This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

## FCC NOTICE

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

You are cautioned that any change or modifications to the equipment not expressly approve by the party responsible for compliance could void your authority to operate such equipment.

	<p><b>CAUTION:</b> Danger of explosion may occur when the battery is incorrectly replaced. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.</p>
---	---

	<p><b>WARNING:</b> Some internal parts of the system may have high electrical voltage. We strongly recommend that only qualified engineers are allowed to service and disassemble the system. If any damages should occur on the system and are caused by unauthorized servicing, it will not be covered by the product warranty.</p>

# 1 Introduction

---

This chapter provides the introduction for BS-0986 system as well as the framework of the user manual.

The following topic is included:

- About This Manual

## **1.1 About This Manual**

Thank you for purchasing our BS-E097 system. The BS-E097 provides faster processing speed, greater expandability and can handle more tasks than before. This manual is designed to assist you how to install and set up the whole system. It contains 5 chapters and 2 appendixes. Users can configure the system according to their own needs. This user manual is intended for service personnel with strong hardware background. It is not intended for general users.

The following section outlines the structure of this user manual.

### ***Chapter 1 Introduction***

This chapter provides the introduction for the BS-0986 system as well as the framework of the user manual.

### ***Chapter 2 Getting Started***

This chapter describes the package contents and outlines the system specifications. Read the safety reminders carefully on how to take care of your system properly.

### ***Chapter 3 System Configuration***

This chapter describes the external I/O ports, outlines the locations of the motherboard components and their respective functions. You will learn how to set the jumpers and configure the system to meet your own needs.

### ***Chapter 4 Software Utilities***

This chapter contains helpful information for proper installations of the Intel® Chipset Software Installation Utility, Graphics Driver Utility, LAN Driver Utility, Sound Driver Utility, Intel® Serial I/O Driver Utility and Microsoft Hotfix Driver Utility.

### ***Chapter 5 AMI BIOS Setup***

This chapter indicates you how to change the BIOS configurations.

### ***Appendix A Technical Summary***

This appendix provides the exploded diagrams and part numbers of the BS-E097.

### ***Appendix B Technical Summary***

This appendix provides the information about the allocation maps for system resources, Watchdog Timer Configuration and Flash BIOS Update.

# 2 Getting Started

## 2.4 Safety Precautions

Before operating this system, read the following information carefully to protect your systems from damages, and extend the life cycle of the system.

1. Check the Line Voltage
  - The operating voltage for this system (BS-0986) should be 12V or 19V,24V DC; otherwise the system may be damaged.
2. Environmental Conditions
  - Place your BS-0986 system on a sturdy, level surface. Be sure to allow enough space around the system to have easy access needs.
  - Avoid installing your system in extremely hot or cold places.
  - Avoid direct sunlight exposure for a long period of time (for example, in a closed car in summer time. Also avoid the system from any heating device.). Or do not use system when it has been left outdoors in a cold winter day.
  - Avoid moving the system rapidly from a hot place to a cold place, and vice versa, because condensation may occur inside the system.
  - Protect your system from strong vibrations which may cause hard disk failure.
  - Do not place the system too close to any radio-active device. Radio-active device may cause signal interference.
  - Always shut down the operating system before turning off the power.
3. Handling
  - Avoid placing heavy objects on the top of the system.
  - Do not turn the system upside down. This may cause the hard drive to malfunction.
  - Do not allow any objects to fall into this device.
  - If water or other liquid spills into the device, unplug the power cord immediately.
4. Good Care
  - When the outside case gets stained, remove the stains using neutral washing agent with a dry cloth.
  - Never use strong agents such as benzene and thinner to clean the surface of the case.
  - If heavy stains are present, moisten a cloth with diluted neutral washing agent or alcohol and then wipe thoroughly with a dry cloth.
  - If dust is accumulated on the case surface, remove it by using a special vacuum cleaner for computers.

### 3.3 Component Locations of System Main Board

#### 3.3.1 Top View of System Main Board

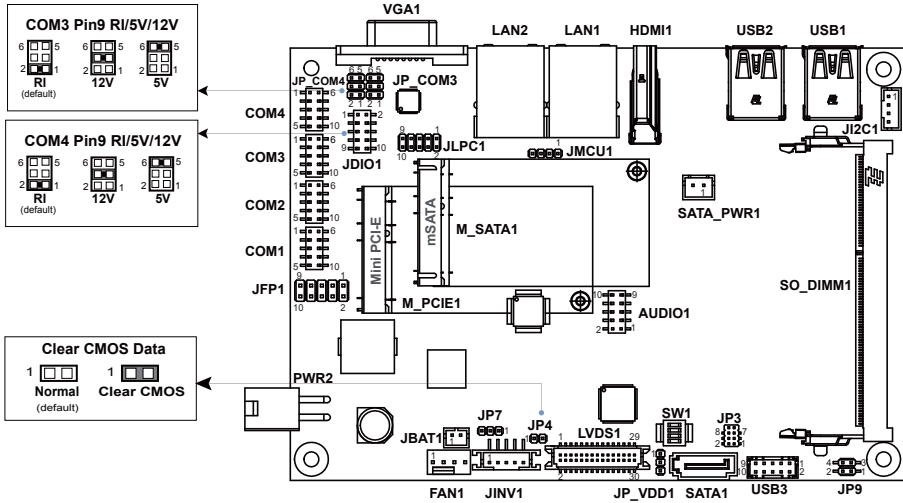

Figure 3-1. Main Board Component Location (Top View)

	<p><b>WARNING:</b> Always disconnect the power cord when you are working with connectors and jumpers on the main board. Make sure both the system and peripheral devices are turned OFF as sudden surge of power could damage sensitive components. Make sure BS-E097 is properly grounded.</p>
	<p><b>CAUTION:</b> Observe precautions while handling electrostatic sensitive components. Make sure to ground yourself to prevent static charge while you are working on the connectors and jumpers. Use a grounding wrist strap and place all electronic components in any static-shielded devices.</p>
	<p><b>CAUTION:</b> Always touch the motherboard components by the edges. Never touch components such as a processor by its pins. Take special cares while you are holding electronic circuit boards by the edges only. Do not touch the mainboard components.</p>

### LAN LED Status

There are LAN LED indicators on the rear side of the main board. By observing their status, you can know the status of the Ethernet connection.

LAN LED Indicator	Color	Status	Description
Right Side LED	Yellow	Blink	LAN Message Active
	-	Off	No LAN Message Active
Left Side LED	Green	On	10/100Mbps LAN connection is enabled.
	Orange	On	Giga LAN connection is enabled.
	-	Off	No LAN switch/hub is connected

### 3.4 How To Set Jumpers

You can configure your board by setting jumpers. Jumper is consists of two or three metal pins with a plastic base mounted on the card, and by using a small plastic "cap", Also known as the jumper cap (with a metal contact inside), you are able to connect the pins. So you can set-up your hardware configuration by "open" or "close" pins.

The jumper can be combined into sets that called jumper blocks. When the jumpers are all in the block, you have to put them together to set up the hardware configuration. The figure below shows how this looks like.

#### Jumpers and Caps

If a jumper has three pins (for examples, labeled PIN1, PIN2, and PIN3), you can connect PIN1 & PIN2 to create one setting by shorting. You can either connect PIN2 & PIN3 to create another setting. The same jumper diagrams are applied all through this manual. The figure below shows what the manual diagrams look and what they represent.

### 3.5.27 Clear CMOS Data Selection

**Jumper Name: JP4**

**Description:** Clear CMOS Data Selection

- Step1.** Remove the main power of the PC.
- Step2.** Close JP4 (pins 1-2) for 6 seconds by a cap.
- Step3.** Remove the cap which is just used on JP4 (1-2), so that JP4 returns to “OPEN”.
- Step4.** Power on the PC and the PC will then auto-reboot for once in order to set SoC’s register.
- Step5.** Done!

# 4 Software Utilities

---

This chapter provides the detailed information that guides users to install driver utilities for the system. The following topics are included:

- Installing Intel<sup>®</sup> Chipset Software Installation Utility
- Installing Graphics Driver Utility
- Installing LAN Driver Utility
- Installing Sound Driver Utility
- Installing Intel<sup>®</sup> Serial I/O Driver Utility
- Microsoft Hotfix KB3211320 and KB3213986 Driver Installation

## 4.1 Introduction

Enclosed with the BS-0986 Series package is our driver utilities contained in a DVD-ROM disk. Refer to the following table for driver locations:

Filename (Assume that DVD-ROM drive is D:)	Purpose	Shell	Win10 64-bit OS
D:\Driver\Flash BIOS	For Aptio(EFI) BIOS update utility	✓	X
D:\Driver\Platform\Chipset	Intel(R) Chipset Device Software Installation Utility	X	✓
D:\Driver\Platform\TXE	For Intel Trusted Execution Engine Interface	X	✓
D:\Driver\Platform\VGA	Intel HD Graphics	X	✓
D:\Driver\Platform\LAN	Intel I210 For LAN Driver installation	X	✓
D:\Driver\Platform\Sound	Realtek ALC888S For Sound driver installation	X	✓
D:\Driver\Platform\Serial IO	Intel(R) Serial IO driver for Windows 10	X	✓
D:\Driver\Hotfix	Microsoft Hotfix KB3211320 and KB3213986 for Windows 10	X	✓

**X : Not support**    **✓: Support**

**Note:** Install the driver utilities immediately after the OS installation is completed.

	<p><b>WARNING:</b> It is <b><u>strongly recommended</u></b> that you follow the installation sequence below:</p> <ol style="list-style-type: none"> <li>(1) Chipset Driver</li> <li>(2) Hotfix</li> <li>(3) Graphics Driver</li> <li>(4) TXE Driver</li> <li>(5) Other Drivers</li> </ol>

## 4.2 Installing Intel® Chipset Software Installation Utility

### Introduction

The Intel® Chipset Software Installation Utility installs the Windows \*.INF files to the target system. These files outline to the operating system how to configure the Intel chipset components in order to ensure that the following functions work properly:

- Core PCI and ISAPNP Services
- PCIe Support
- SATA Storage Support
- USB Support
- Identification of Intel® Chipset Components in the Device Manager

### Intel® Chipset Software Installation Utility

The utility pack is to be installed only for Windows 10 64bit, and it should be installed immediately after the OS installation is finished. Please follow the steps below:

- 1** Connect the USB DVD-ROM device to BS-0986 and insert the driver disk.
- 2** Enter the **Main Chip** folder where the Chipset driver is located
- 3** Click **Setup.exe** file for driver installation.
- 4** Follow the on-screen instructions to install the driver.
- 5** Once the installation is completed, shut down the system and restart BS-0986 for the changes to take effects.

### 4.3 Installing Graphics Driver Utility

The GRAPHICS interface embedded in BS-0986 can support a wide range of display type

To install the Graphics driver utility, follow the steps below:

- 1** Connect the USB DVD-ROM device to BS-0986 and insert the driver disk.
- 2** Enter the **VGA** folder where the driver is located.
- 3** Click the **Setup.exe** file for driver installation.
- 4** Follow the on-screen instructions to complete the installation.
- 5** Once the installation is completed, shut down the system and restart BS-E0986 for the changes to take effects.

## **4.4 Installing LAN Driver Utility**

Enhanced with LAN function, BS-0986 supports various network adapters. To install the LAN Driver, follow the steps below:

- 1** Connect the USB DVD-ROM device to BS-09867 and insert the driver disk.
- 2** Enter the **LAN** folder where the driver is located.
- 3** Click **Setup.exe** file for driver installation.
- 4** Follow the on-screen instructions to complete the installation.
- 5** Once the installation is completed, shut down the system and restart BS-0986 for the changes to take effects.

**For more details on the installation procedure, refer to the Readme.txt file that you can find on LAN Driver Utility.**

## 4.5 Installing Sound Driver Utility

The sound function enhanced in this system is fully compatible with Windows® 10 64bit.

To install the Sound Driver, follow the steps below:

- 1** Connect the USB DVD-ROM device to BS-0986 and insert the driver disk.
- 2** Open the **Sound** folder where the driver is located.
- 3** Click the **Setup.exe** file for driver installation.
- 4** Follow the on-screen instructions to complete the installation.
- 5** Once the installation is completed, shut down the system and restart BS-0986 for the changes to take effects.

## 4.6 Installing Intel® Serial I/O Driver Utility

To install the Serial I/O Driver, follow the steps below:

- 1** Connect the USB DVD-ROM device to BS-E097 and insert the driver disk.
- 2** Open the **Serial I/O** folder where the driver is located.
- 3** Select Windows 10 (64-bit) for your OS platform.
- 4** Click the **SetupSerialIO.exe** file for driver installation.
- 5** Follow the on-screen instructions to complete the installation.
- 6** Once the installation is completed, shut down the system and restart BS-E097 for the changes to take effects.

## 4.7 Microsoft Hotfix KB3211320 and KB3213986 Driver Installation

### Introduction

The Microsoft Hotfix kb3211320 and kb3213986 Driver that needs to be installed depends on the system's specific hardware and firmware features. The installer, compatible with Windows 10, detects the system's capabilities and installs the relevant drivers and applications.

### Installation Instructions for Windows 10

To install the utility, simply follow the following steps:

- 1** Insert the driver disk into a DVD ROM device.
- 2** Under Windows system, go to the directory where the driver is located.
- 3** Run **windows10.0-kb3211320-x64** and **windows10.0-kb3213986-x64** with administrative privileges.
- 4** Follow the on-screen instructions to complete the installation.
- 5** Once the installation is completed, shut down the system and restart BS-E097 for the changes to take effect.

# 5 BIOS SETUP

---

This chapter guides users how to configure the basic system configurations via the BIOS Setup Utilities. The information of the system configuration is saved in battery-backed CMOS RAM and BIOS NVRAM so that the Setup information is retained when the system is powered off. The BIOS Setup Utilities consist of the following menu items:

- Main Menu
- Advanced Menu
- Chipset Menu
- Security Menu
- Boot Menu
- Save & Exit Menu

## 5.1 Introduction

The BS-0986 System uses an AMI (American Megatrends Incorporated) Aptio BIOS that is stored in the Serial Peripheral Interface Flash Memory (SPI Flash) and can be updated. The SPI Flash contains the built-in BIOS setup program, Power-On Self-Test (POST), PCI auto-configuration utility, LAN EEPROM information, and Plug and Play support.

Aptio is AMI's BIOS firmware based on the UEFI (Unified Extensible Firmware Interface) specifications and the Intel Platform Innovation Framework for EFI. The UEFI specification defines an interface between the operating system and platform firmware. The interface consists of data tables that contain platform-related information, boot service calls, and runtime service calls that are available to the operating system and its loader. These elements have combined to provide a standard environment for booting the operating system and running pre-boot applications.

The diagram below shows the Extensible Firmware Interface's location in the software stack.

Figure 5-1. Extensible Firmware Interface Diagram

EFI BIOS provides an user interface that allows you to modify hardware configuration, e.g. change the system date and time, enable/disable a system component, determine bootable device priority, set up personal password, etc., which is convenient for engineers to perform modifications and customize the computer

system and allows technicians to troubleshoot the occurred errors when the hardware is faulty.

The BIOS setup menu allows users to view and modify the BIOS settings for the computer. After the system is powered on, users can access the BIOS setup menu by pressing <Del> or <Esc> immediately while the POST message is running before the operating system is loading.

Users will need to set up the system configuration from the BIOS Setup Utility when any of the following conditions occurs:

1. You are starting your system for the first time.
2. You have changed the hardware in your system or the hardware becomes faulty.
3. The system configuration is reset after the user configures to clear CMOS data via the JP4 jumper.
4. The power of the CMOS RAM became lost and the system configuration has been erased.

All the menu settings are described in details in this chapter.

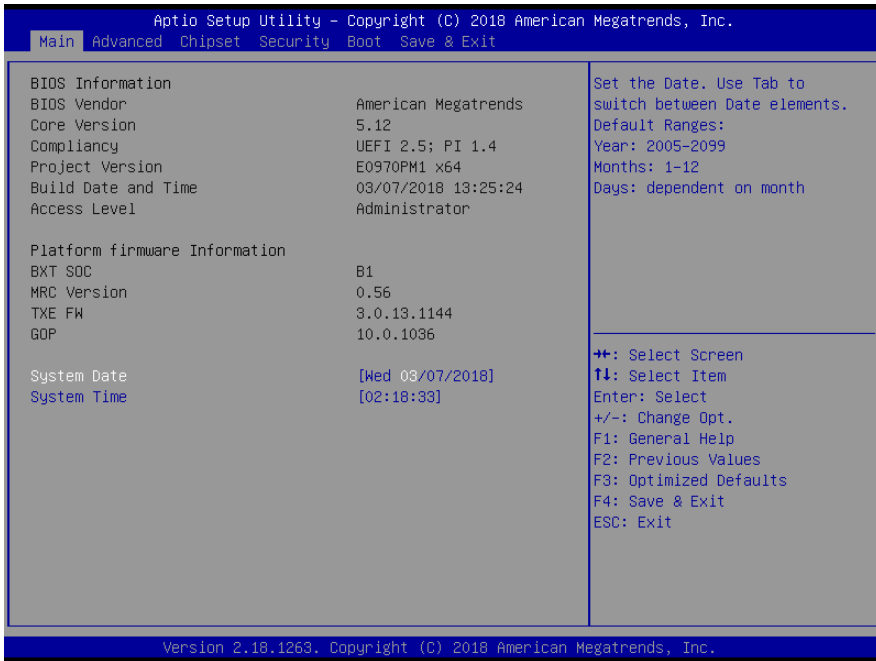

## 5.2 Accessing Setup Utility

After the system is powered on, BIOS will enter the Power-On Self-Test (POST) routines and the POST message will be displayed:

Figure 5-2. POST Screen with AMI Logo

Press **<Del>** or **<Esc>** to access the Setup Utility program and the **Main** menu of the Aptio Setup Utility will appear on the screen as below:

### BIOS Setup Menu Initialization Screen

You may move the cursor by <←> and <↓> keys to highlight the individual menu items. As you highlight each item, a brief description of the highlighted selection will appear on the right side of the screen.

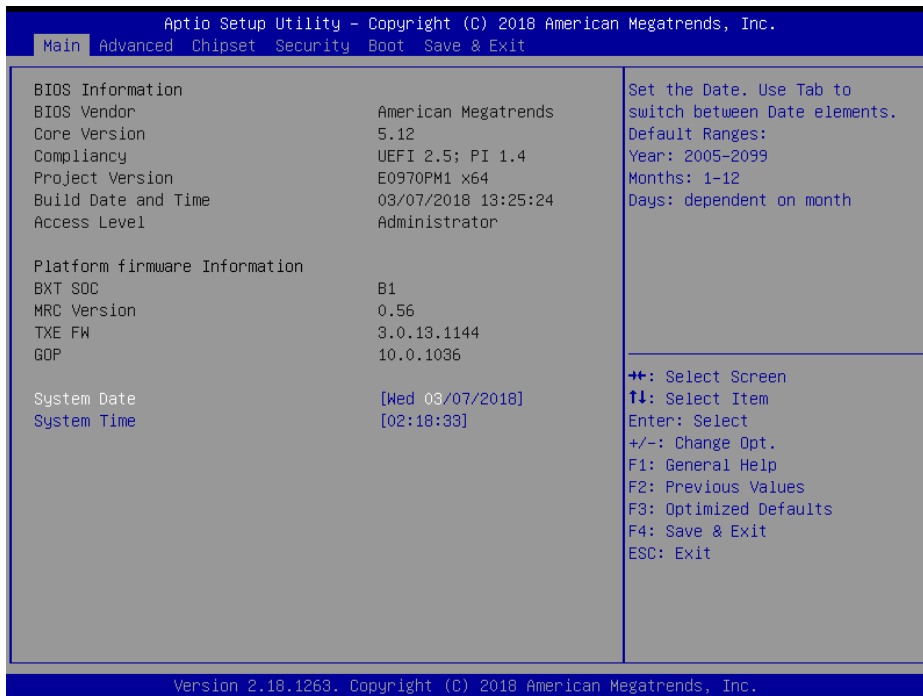

The language of the BIOS setup menu interface and help messages are shown in US English. You may use <←> or <↓> key to select among the items and press <Enter> to confirm and enter the sub-menu. The following table provides the list of the navigation keys that you can use while operating the BIOS setup menu.

BIOS Setup Navigation Key	Description
<←> and <→>	Select a different menu screen (move the cursor from the selected menu to the left or right).
<↑> and <↓>	Select a different item (move the cursor from the selected item upwards or downwards)
<Enter>	Execute the command or select the sub-menu.
<F2>	Load the previous configuration values.
<F3>	Load the default configuration values.
<F4>	Save the current values and exit the BIOS setup menu.
<Esc>	Close the sub-menu. Trigger the confirmation to exit BIOS setup menu.

## 5.3 Main

Menu Path *Main*

The **Main** menu allows you to view the BIOS Information, change the system date and time, and view the user access privilege level. Use tab to switch between date elements. Use <↑> or <↓> arrow keys to highlight the item and enter the value you want in each item. This screen also displays the BIOS version (project) and BIOS Build Date and Time.

**Main Screen**

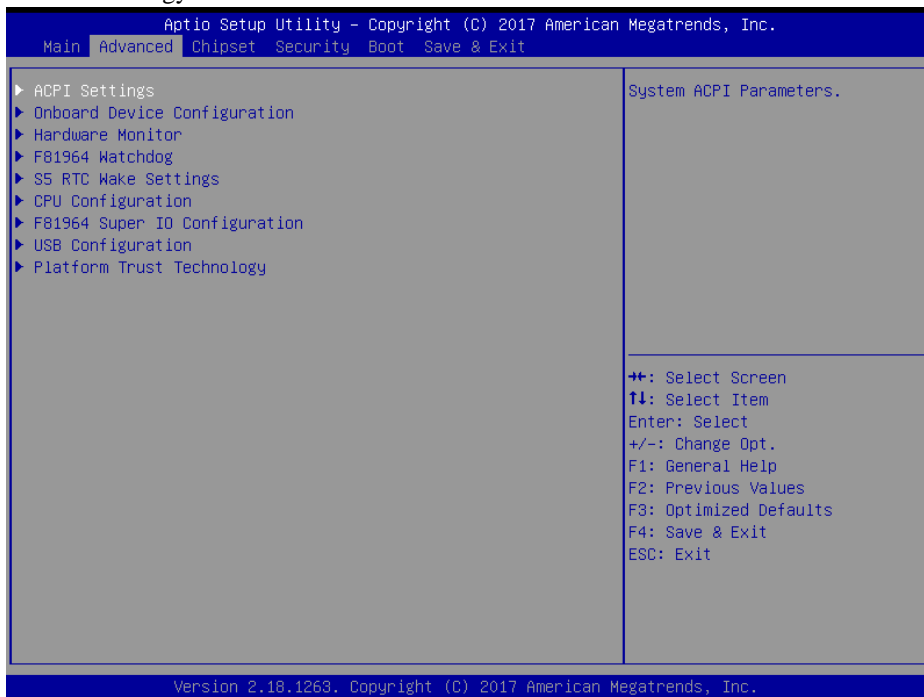

BIOS Setting	Options	Description/Purpose
BIOS Vendor	No changeable options	Displays the name of the BIOS vendor.
Core Version	No changeable options	Displays the current BIOS core version.
Compliancy	No changeable options	Displays the current UEFI version.
Project Version	No changeable options	Displays the version of the BIOS currently installed on the platform.
Build Date and Time	No changeable options	Displays the date that the current BIOS version is built.
Access Level	No changeable options	Displays the current user access level.
BXT SOC	No changeable options	Displays the SOC stepping.
MRC Version	No changeable options	Displays the MRC version.

<b>BIOS Setting</b>	<b>Options</b>	<b>Description/Purpose</b>
TXE FW	No changeable options	Displays the TXE FW version.
GOP	No changeable options	Displays the GOP version.
System Date	Month, day, year	Sets the system date. The format is [Day Month/ Date/ Year]. Users can directly enter values or use <+> or <-> arrow keys to increase/decrease it. The “Day” is automatically changed.
System Time	Hour, minute, second	Sets the system time. The format is [Hour: Minute: Second]. Users can directly enter values or use <+> or <-> arrow keys to increase/decrease it.

## 5.4 Advanced

Menu Path                      *Advanced*

This menu provides advanced configurations such as ACPI Settings, Onboard Device Configuration, Hardware Monitor, F81964 Watchdog, S5 RTC Wake Settings, CPU Configuration, F81964 Super IO Configuration, USB Configuration and Platform Trust Technology.

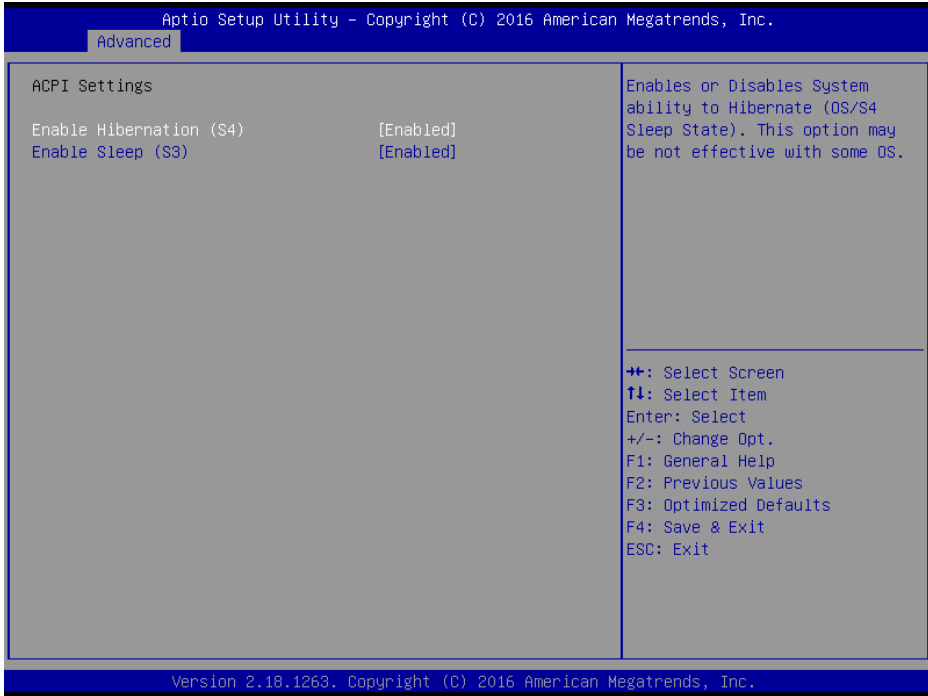

**Advanced Menu Screen**

BIOS Setting	Options	Description/Purpose
ACPI Settings	Sub-Menu	System ACPI parameters.
Onboard Device Configuration	Sub-Menu	Project specific parameters.
Hardware Monitor	Sub-Menu	Monitor hardware status.
F81964 Watchdog	Sub-Menu	Watchdog timer parameters.
S5 RTC Wake Settings	Sub-Menu	RTC wake parameters.
CPU Configuration	Sub-Menu	CPU configuration parameters.
F81964 Super IO Configuration	Sub-Menu	System Super IO chip parameters
USB Configuration	Sub-Menu	USB configuration parameters.
Platform Trust Technology	Sub-Menu	Platform Trust Technology.

## 5.4.1 Advanced - ACPI Settings

Menu Path *Advanced > ACPI Settings*

The **ACPI Settings** allows users to configure relevant ACPI (Advanced Configuration and Power Management Interface) settings, such as Hibernation (S4) and Enable Sleep (S3).

**ACPI Settings Screen**

BIOS Setting	Options	Description/Purpose
Enable Hibernation (S4)	- Disabled - <b>Enabled (default)</b>	Enables or Disables System ability to Hibernate (OS/S4 Sleep State). This option may be not effective with some OS.
Enable Sleep (S3)	- Disabled - <b>Enabled (default)</b>	Enables or Disables System ability to Sleep (OS/S3 Sleep State).

## 5.4.2 Advanced – Onboard Device Configuration

Menu Path *Advanced > Onboard Device Configuration*

**Onboard Device Configuration Screen**

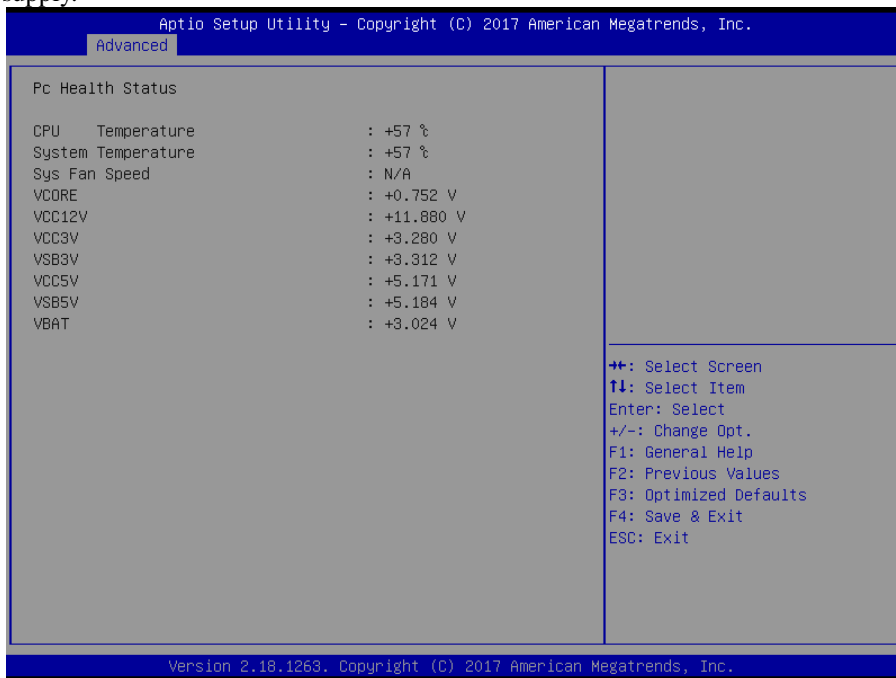

BIOS Setting	Options	Description/Purpose
COM2 Mode Selection	- RS-422 - <b>RS-232 (default)</b> - RS-485	Selects COM2 mode.

## 5.4.3 Advanced – Hardware Monitor

Menu Path *Advanced > Hardware Monitor*

The **Hardware Monitor** allows users to monitor the health and status of the system such as CPU temperature, system temperature, system fan speed and voltage levels in supply.

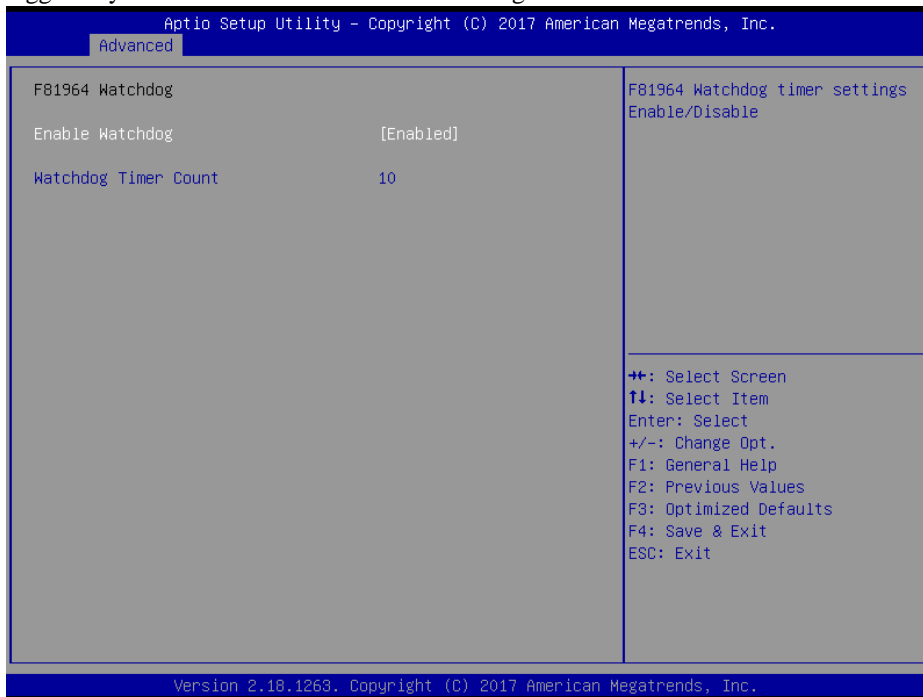

**Hardware Monitor Screen**

BIOS Setting	Options	Description/Purpose
CPU Temperature	No changeable options	Displays the processor's temperature.
System Temperature	No changeable options	Displays the system's temperature.
Sys Fan Speed	No changeable options	Displays system fan speed.
VCORE	No changeable options	Detects and displays the VCORE CPU voltage.
VCC12V	No changeable options	Detects and displays 12V voltage.
VCC3V	No changeable options	Detects and displays the voltage level of VCC3V in supply.
VS3V	No changeable options	Detects and displays VS3V voltage.
VCC5V	No changeable options	Detects and displays the voltage level of VCC5V in supply.
VS5V	No changeable options	Detects and displays the voltage level of VS5V in supply.
VBAT	No changeable options	Detects and displays the battery voltage.

## 5.4.4 Advanced - F81964 Watchdog

Menu Path *Advanced > F81964 Watchdog*

If the system hangs or fails to respond, enable the F81964 watchdog function to trigger a system reset via the 255-level watchdog timer.

**F81964 Watchdog Screen**

BIOS Setting	Options	Description/Purpose
Enable Watchdog	- Disabled (default) - Enabled	Enables/Disables 81964 Watchdog timer settings.
Watchdog Timer Count	(Numeric) 10 to 255	Sets the timeout for Watchdog timer. Watchdog Timer = 1sec * Count

## 5.4.5 Advanced - S5 RTC Wake Settings

Menu Path *Advanced > S5 RTC Wake Settings*

The **S5 RTC Wake Settings** enables/disables the system to wake up at a preset time of a day from S5 State using RTC alarm.

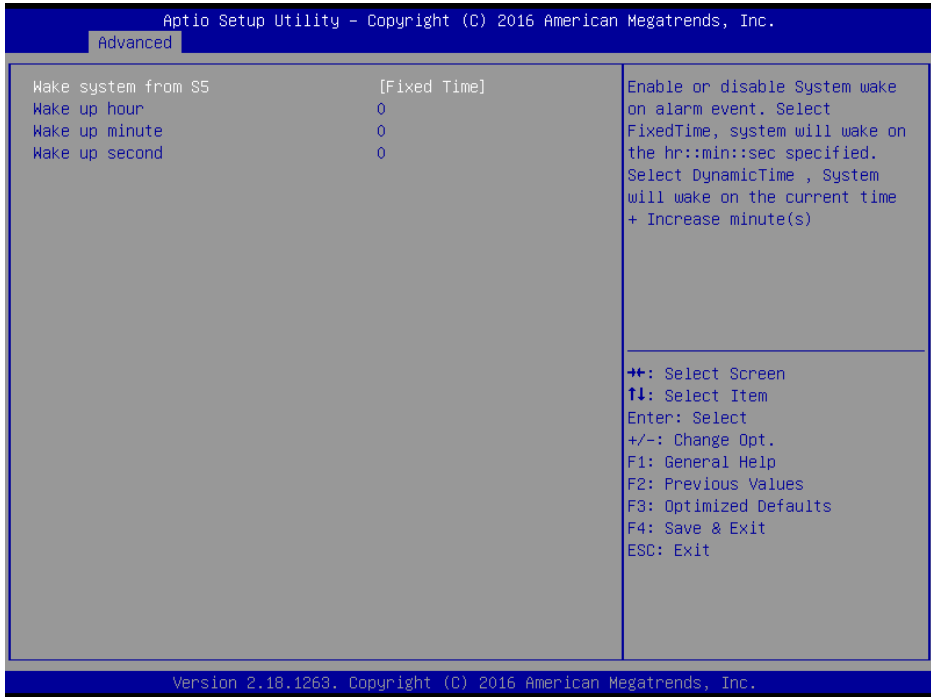

**S5 RTC Wake Settings Screen**

BIOS Setting	Options	Description/Purpose
Wake system from S5	<ul style="list-style-type: none"> <li>- Disabled (default)</li> <li>- Fixed Time</li> <li>- Dynamic Time</li> </ul>	<p>Enables or disables System wake on alarm event.</p> <ul style="list-style-type: none"> <li>• <b>Fixed Time:</b> The system will wake on the time (hr::min::sec) specified.</li> <li>• <b>Dynamic Time:</b> The system will wake on the current time + increased minute(s).</li> </ul>

### 5.4.5.1 S5 RTC Wake Settings [Fixed Time]

Menu Path *Advanced > S5 RTC Wake Settings [Fixed Time]*

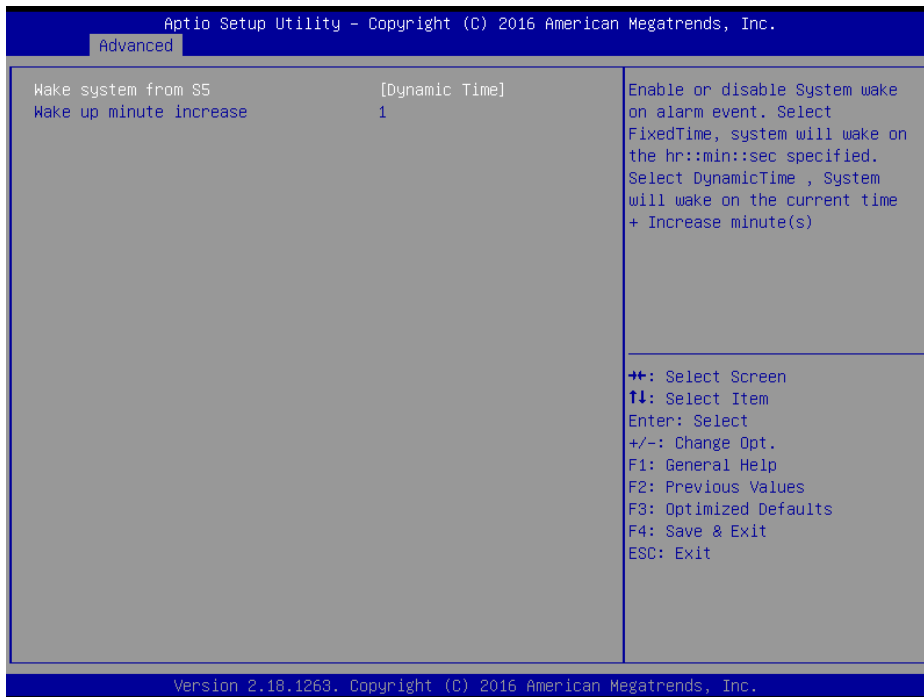

**S5 RTC Wake Settings Screen (Fixed Time)**

BIOS Setting	Options	Description/Purpose
Wake up hour	(Numeric) from 0 to 23	Sets an hour for a scheduled power-on event.
Wake up minute	(Numeric)from 0 to 59	Sets a minute for a scheduled power-on event.
Wake up second	(Numeric)from 0 to 59	Sets a second for a scheduled power-on event.

### 5.4.5.2 S5 RTC Wake Settings [Dynamic Time]

Menu Path *Advanced > S5 RTC Wake Settings [Dynamic Time]*

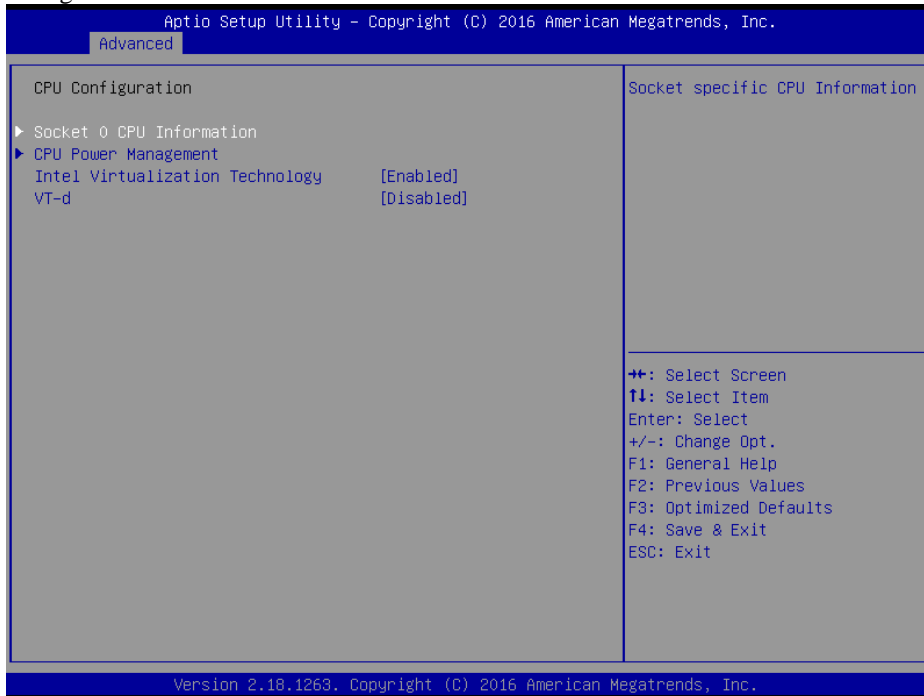

**S5 RTC Wake Settings Screen (Dynamic Time)**

BIOS Setting	Options	Description/Purpose
Wake up minute increase	(Numeric) from 1 to 5	Sets a period of time (in minutes) after which the board wakes up from S5 state.

## 5.4.6 Advanced - CPU Configuration

Menu Path *Advanced > CPU Configuration*

The **CPU Configuration** provides advanced CPU settings such as CPU power management and some information about CPU.

**CPU Configuration Screen**

BIOS Setting	Options	Description/Purpose
Socket 0 CPU Information	Sub-Menu	Socket specific CPU Information.
CPU Power Management	Sub-Menu	CPU power management options.
Intel Virtualization Technology	- Disabled - <b>Enabled (default)</b>	When enabled, a VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.
VT-d	- <b>Disabled (default)</b> - Enabled	Enables/Disables CPU VT-d.

## 5.4.6.2 CPU Configuration - CPU Power Management Configuration

Menu Path *Advanced > CPU Configuration > CPU Power Management Configuration*

**CPU Power Management Configuration Screen**

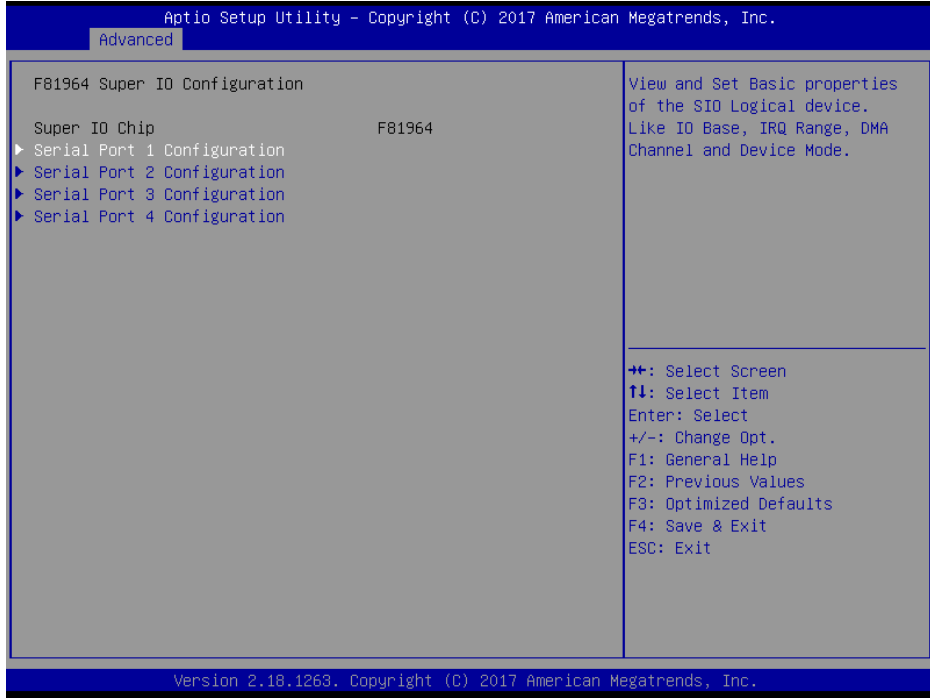

BIOS Setting	Options	Description/Purpose
EIST	- Disabled - Enabled (default)	Enables/Disables Intel SpeedStep feature for dynamic scaling processor frequency.

## 5.4.7 Advanced - F81964 Super IO Configuration

Menu Path *Advanced > F81964 Super IO Configuration*

The **F81964 Super IO Configuration** allows users to configure the serial ports 1-4.

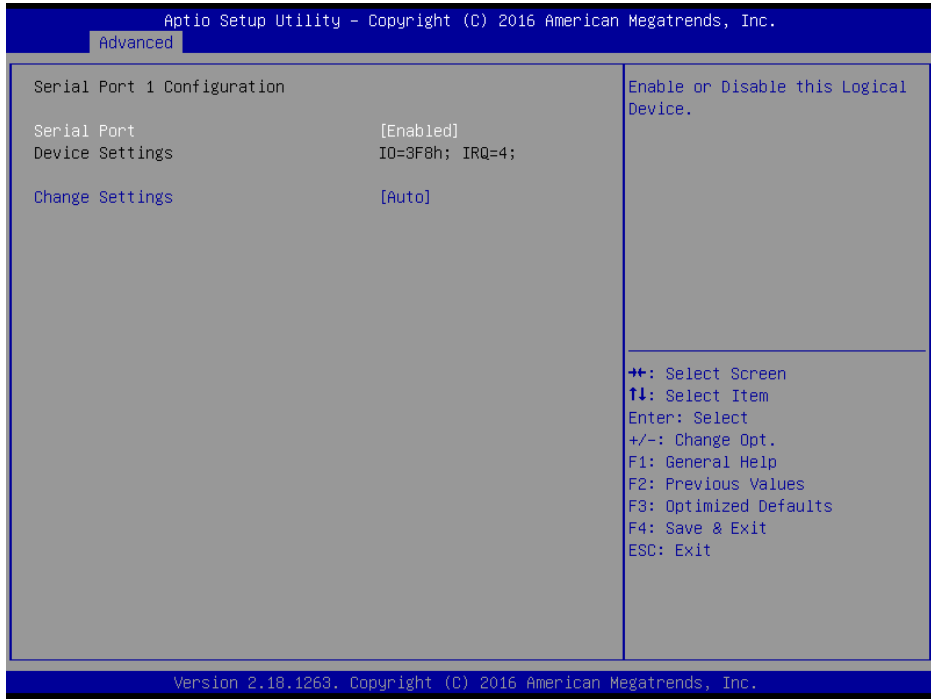

**F81964 Super IO Configuration Screen**

BIOS Setting	Options	Description/Purpose
Super IO Chip (F81964)	No changeable options	Displays the super I/O chip model.
Serial Port 1 Configuration	Sub-Menu	COM1 parameters.
Serial Port 2 Configuration	Sub-Menu	COM2 parameters.
Serial Port 3 Configuration	Sub-Menu	COM3 parameters.
Serial Port 4 Configuration	Sub-Menu	COM4 parameters.

### 5.4.7.1 F81964 Super IO Configuration - Serial Port 1 Configuration

Menu Path *Advanced > F81964 Super IO Configuration > Serial Port 1 Configuration*

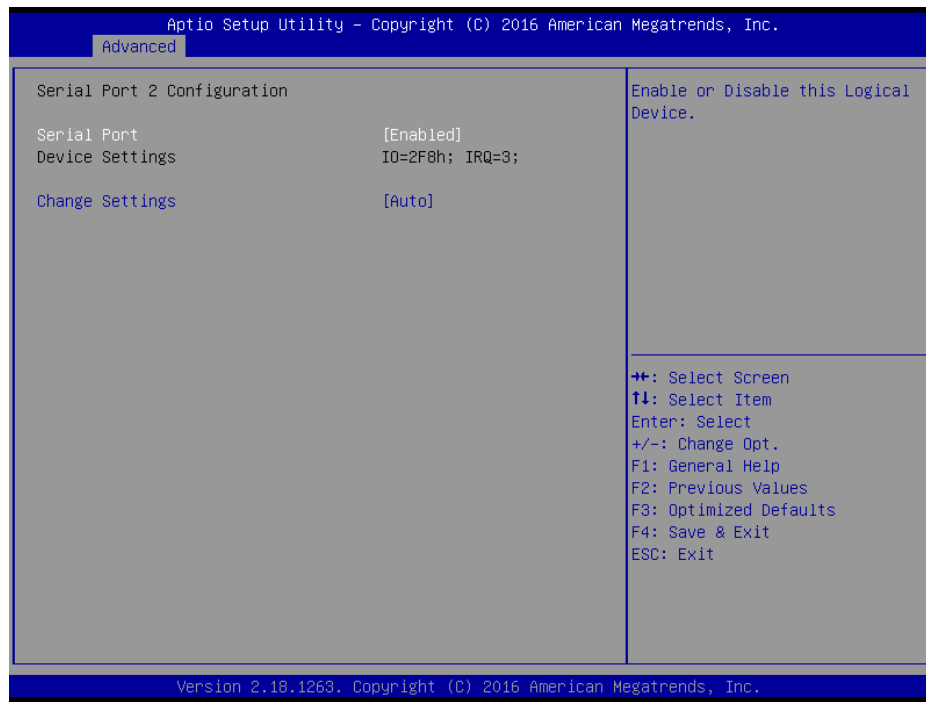

**Serial Port 1 Configuration Screen**

BIOS Setting	Options	Description/Purpose
Serial Port	- Disabled - <b>Enabled (default)</b>	Enables/Disables COM1.
Device Settings	No changeable options	Reports the current COM setting.
Change Settings	- <b>Auto (default)</b> - IO=3F8h; IRQ=4 - IO=3F8h; IRQ=3,4,5,7,9,10,11,12; - IO=2F8h; IRQ=3,4,5,7,9,10,11,12; - IO=3E8h; IRQ=3,4,5,7,9,10,11,12; - IO=2E8h; IRQ=3,4,5,7,9,10,11,12;	Allows users to change Device's Resource settings. New settings will be reflected on this Setup Page after System restarts.

## 5.4.7.2 F81964 Super IO Configuration - Serial Port 2 Configuration

Menu Path *Advanced > F81964 Super IO Configuration > Serial Port 2 Configuration*

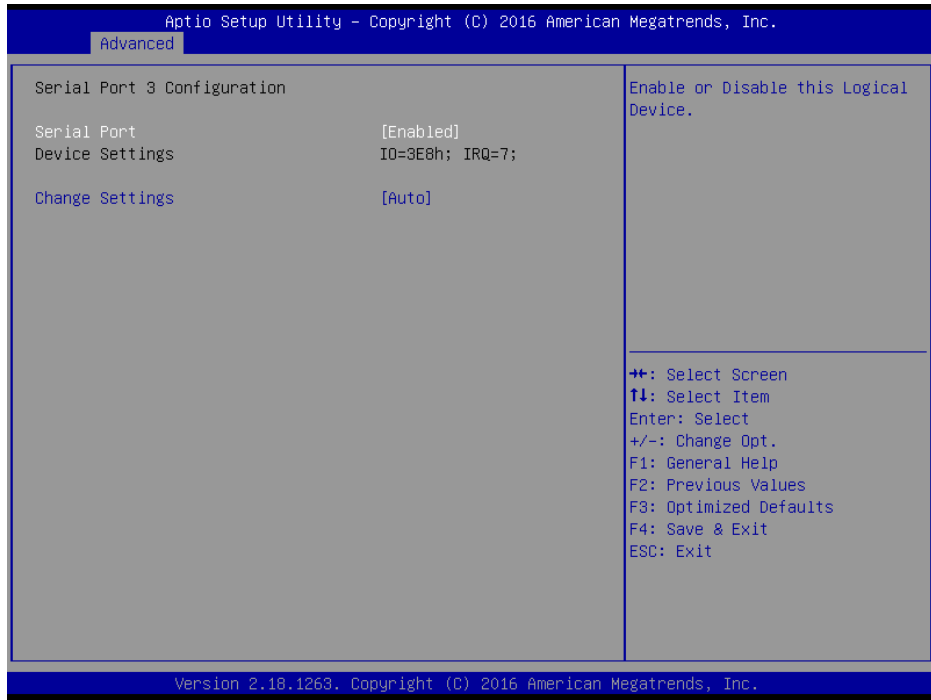

**Serial Port 2 Configuration Screen**

BIOS Setting	Options	Description/Purpose
Serial Port	- Disabled - <b>Enabled (default)</b>	Enables/Disables COM2.
Device Settings	No changeable options	Reports the current COM setting.
Change Settings	- <b>Auto (default)</b> - IO=2F8h; IRQ=3 - IO=3F8h; IRQ=3,4,5,7,9,10,11,12; - IO=2F8h; IRQ=3,4,5,7,9,10,11,12; - IO=3E8h; IRQ=3,4,5,7,9,10,11,12; - IO=2E8h; IRQ=3,4,5,7,9,10,11,12;	Allows users to change Device's Resource settings. New settings will be reflected on this Setup Page after System restarts.

### 5.4.7.3 F81964 Super IO Configuration - Serial Port 3 Configuration

Menu Path *Advanced > F81964 Super IO Configuration > Serial Port 3 Configuration*

**Serial Port 3 Configuration Screen**

BIOS Setting	Options	Description/Purpose
Serial Port	- Disabled - <b>Enabled (default)</b>	Enables/Disables COM3.
Device Settings	No changeable options	Reports the current COM setting.
Change Settings	- <b>Auto (default)</b> - IO=3E8h; IRQ=7 - IO=3E8h; IRQ=3,4,5,7,9,10,11,12; - IO=2E8h; IRQ=3,4,5,7,9,10,11,12; - IO=2F0h; IRQ=3,4,5,7,9,10,11,12; - IO=2E0h; IRQ=3,4,5,7,9,10,11,12;	Allows users to change Device's Resource settings. New settings will be reflected on this Setup Page after System restarts.

### 5.4.7.4 F81964 Super IO Configuration - Serial Port 4 Configuration

Menu Path *Advanced > F81964 Super IO Configuration > Serial Port 4 Configuration*

**Serial Port 4 Configuration Screen**

BIOS Setting	Options	Description/Purpose
Serial Port	- Disabled - Enabled (default)	Enable/Disable COM4.
Device Settings	No changeable options	Reports the current COM setting.
Change Settings	- Auto (default) - IO=2E8h; IRQ=10 - IO=3E8h; IRQ=3,4,5,7,9,10,11,12; - IO=2E8h; IRQ=3,4,5,7,9,10,11,12; - IO=2F0h; IRQ=3,4,5,7,9,10,11,12; - IO=2E0h; IRQ=3,4,5,7,9,10,11,12	Allows users to change Device's Resource settings. New settings will be reflected on this Setup Page after System restarts.

## 5.4.8 Advanced - USB Configuration

Menu Path *Advanced > USB Configuration*

The **USB Configuration** allows users to configure advanced USB settings such as USB mass storage driver support and mass storage devices.

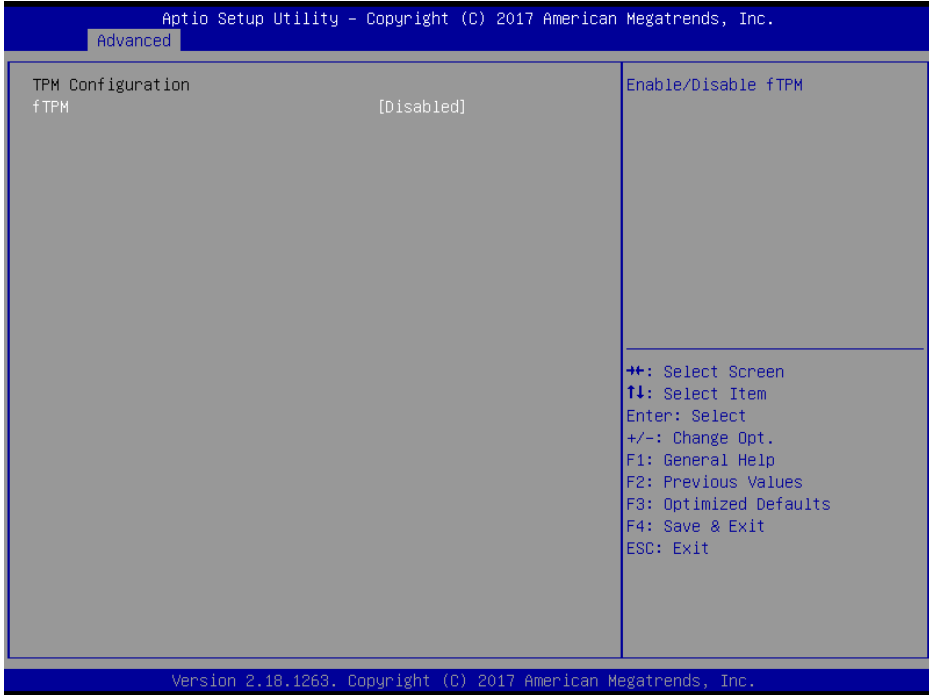

**USB Configuration Screen**

BIOS Setting	Options	Description/Purpose
USB Module Version	No changeable options	Displays USB module version.
USB Controllers	No changeable options	Displays number and type of USB controllers (if any).
USB Devices	No changeable options	Displays number and type of connected USB devices (if any).
USB Mass Storage Driver Support	- Disabled - <b>Enabled (default)</b>	Enables/ Disables USB Mass Storage Driver Support.
MASS STORAGE DEVICES: [drive(s)]	- <b>Auto (default)</b> - Floppy - Forced FDD - Hard Disk - CD-ROM	<b>AUTO</b> enumerates devices according to their media format. Optical drives are emulated as ' <b>CD-ROM</b> '. Drives with no media will be emulated according to a drive type.

## 5.4.9 Advanced - Platform Trust Technology

Menu Path *Advanced > Platform Trust Technology*

The **Platform Trust Technology** allows users to configure advanced TPM settings such as fTPM.

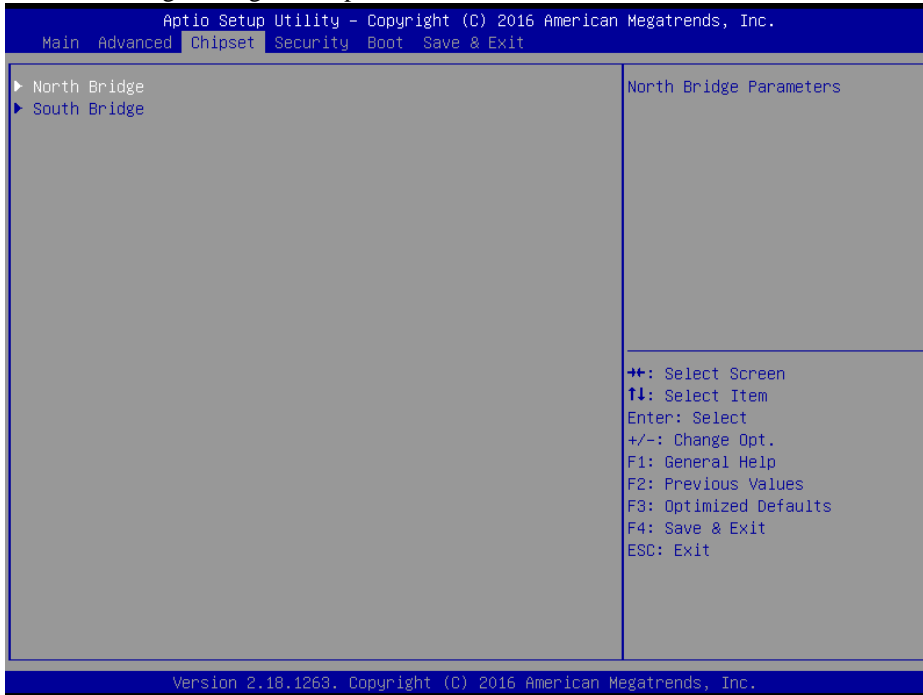

**Platform Trust Technology Screen**

BIOS Setting	Options	Description/Purpose
fTPM	- Disabled - Enabled	Enables or Disables fTPM. It must be disabled when discrete TPM is used.

## 5.5 Chipset

Menu Path *Chipset*

This menu allows users to configure advanced Chipset settings such as North Bridge and South Bridge configuration parameters.

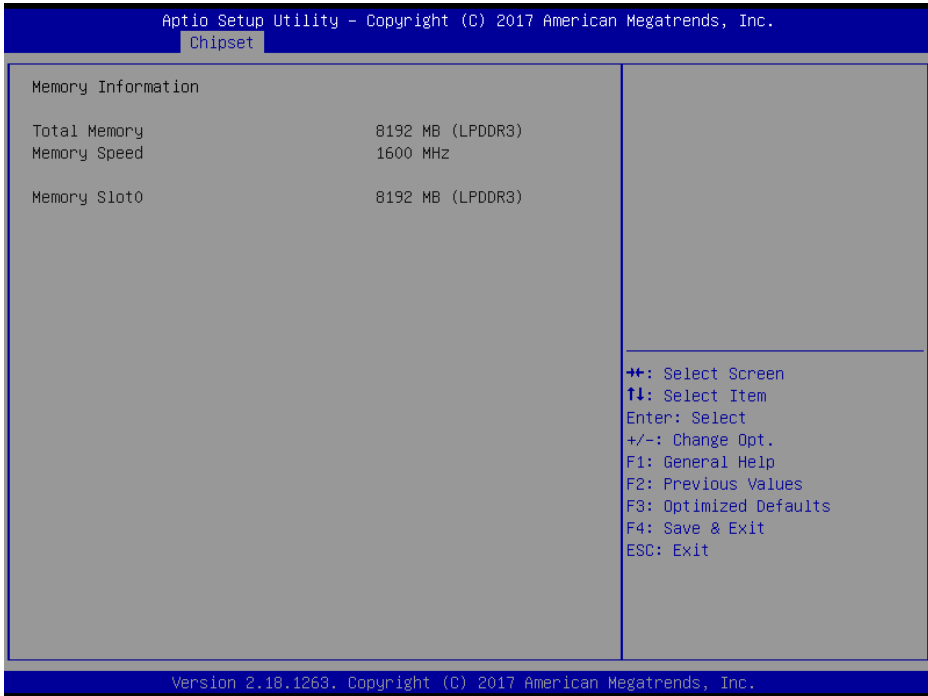

**Chipset Screen**

BIOS Setting	Options	Description/Purpose
North Bridge	Sub-menu	North Bridge Parameters.
South Bridge	Sub-menu	South Bridge Parameters.

## 5.5.1 Chipset - North Bridge

Menu Path *Chipset > North Bridge*

**North Bridge Screen**

BIOS Setting	Options	Description/Purpose
Total Memory	No changeable options	Displays the current amount and type of memory on the system, e.g. "8192 MB (LPDDR3)".
Memory Speed	No changeable options	Displays memory speed.
Memory Slot0	No changeable options	Displays the current amount and type of memory on each memory slot, e.g. "8192 MB (LPDDR3)".

## 5.5.2 Chipset - South Bridge

Menu Path *Chipset > South Bridge*

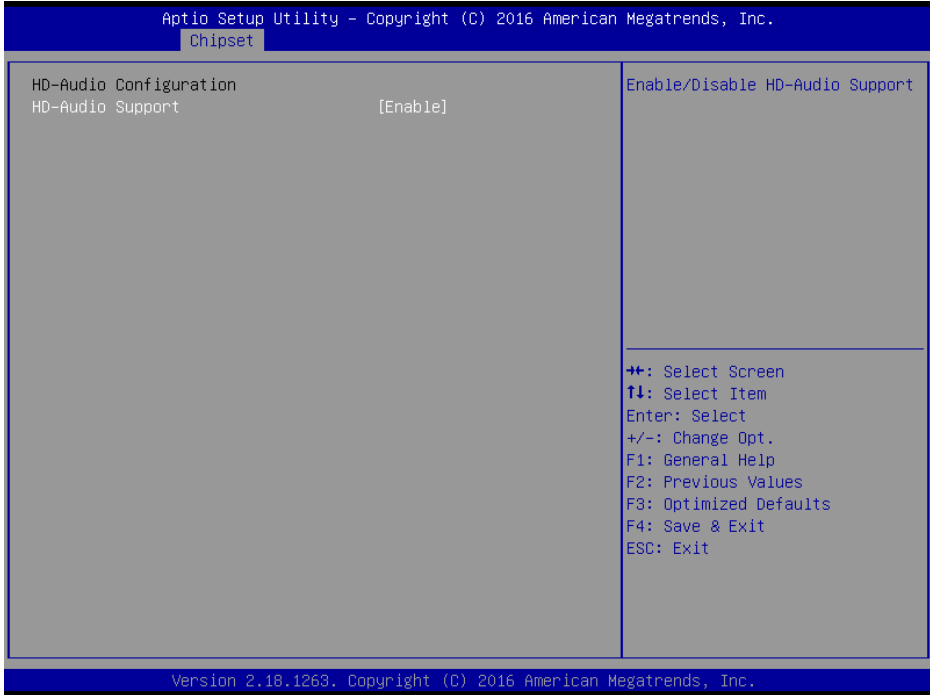

**South Bridge Screen**

BIOS Setting	Options	Description/Purpose
HD-Audio Configuration	Sub-Menu	HD-Audio configuration settings.
LPSS Configuration	Sub-Menu	LPSS configuration settings.
PCI Express Configuration	Sub-Menu	PCI Express configuration settings.
SATA Drives	Sub-Menu	SATA Drives configuration settings.
Miscellaneous Configuration	Sub-Menu	Miscellaneous configuration settings

### 5.5.2.1 South Bridge - HD-Audio Configuration

Menu Path *Chipset > South Bridge > HD-Audio Configuration*

**HD-Audio Configuration Screen**

BIOS Setting	Options	Description/Purpose
HD-Audio Support	- Disabled - Enabled (default)	Enables/Disables HD-Audio support.

## 5.5.2.2 South Bridge - LPSS Configuration

Menu Path *Chipset > South Bridge > LPSS Configuration*

**LPSS Configuration Screen**

BIOS Setting	Options	Description/Purpose
LPSS I2C #1 Support (D22:F0)	- Disable - <b>PCI Mode (default)</b>	Enables/Disables LPSS I2C #1 support.
Set LPSS I2C #1 Speed	- Standard Mode - <b>Fast Mode (default)</b> - Fast Plus Mode - High Speed Mode	Selects LPSS I2C #1 speed.

### 5.5.2.3 South Bridge - PCI Express Configuration

Menu Path *Chipset > South Bridge > PCI Express Configuration*

**PCI Express Configuration Screen**

BIOS Setting	Options	Description/Purpose
PCI E Express Root Port 1 (I210 LAN)	Sub-Menu	PCIE RP1 parameters (I210 LAN).
PCI E Express Root Port 2 (I210 LAN)	Sub-Menu	PCIE RP2 parameters (I210 LAN).
PCI E Express Root Port 3 (Mini-PCIe)	Sub-Menu	PCIE RP3 parameters (Mini-PCIe).

## South Bridge - PCI Express Configuration - PCI Express Root Port 1 (I210 LAN)

Menu Path *Chipset > South Bridge > PCI Express Configuration > PCI Express Root Port 1(I210 LAN)*

**PCI Express Root Port 1 (I210 LAN) Screen**

BIOS Setting	Options	Description/Purpose
PCI Express Root Port 1 (I210 LAN)	- Disable - Enable - Auto (default)	Enable/Disable PCIE root port 1 (I210 LAN).
PCIe Speed	- Auto (default) - Gen1 - Gen2	Configures PCIe speed.

## South Bridge - PCI Express Configuration - PCI Express Root Port 2 (I210 LAN)

Menu Path *Chipset > South Bridge > PCI Express Configuration > PCI Express Root Port 2(I210 LAN)*

**PCI Express Root Port 2(I210 LAN) Screen**

BIOS Setting	Options	Description/Purpose
PCI Express Root Port 2 (I210 LAN)	- Disable - Enable - <b>Auto (default)</b>	Enables/Disables PCIE root port 2 (I210 LAN).
PCIe Speed	- <b>Auto (default)</b> - Gen1 - Gen2	Configures PCIe speed.

## South Bridge - PCI Express Configuration - PCI Express Root Port 3 (Mini-PCIe)

Menu Path *Chipset > South Bridge > PCI Express Configuration > PCI Express Root Port 3 (Mini-PCIe)*

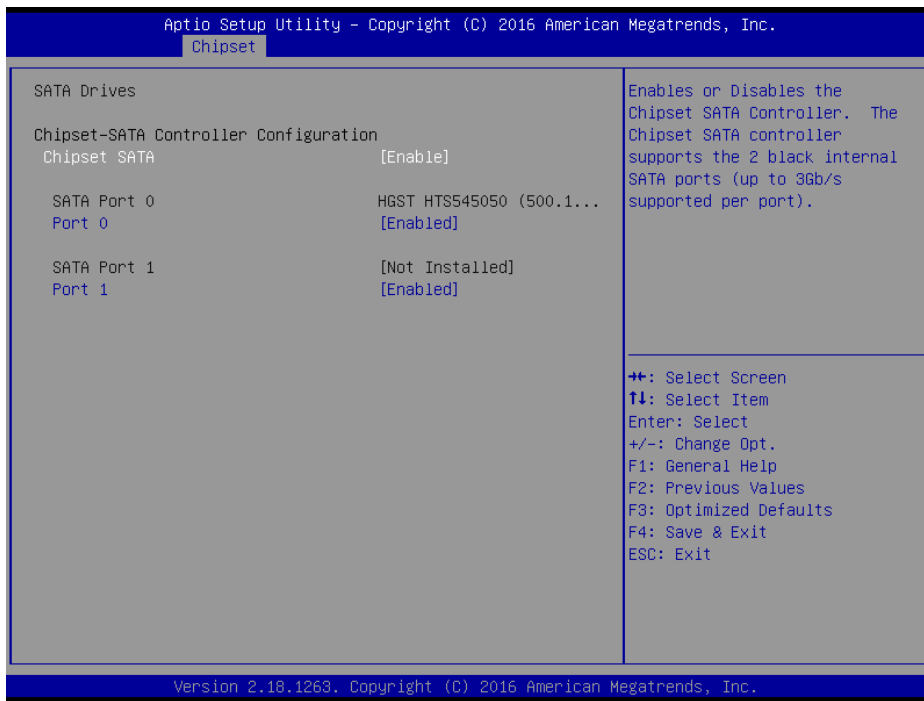

**PCI Express Root Port 3 (Mini-PCIe) Screen**

BIOS Setting	Options	Description/Purpose
PCI Express Root Port 3 (Mini-PCIe)	- Disable - Enable - Auto (default)	Enables/Disables PCIE root port 3 (Mini-PCIe).
PCIe Speed	- Auto (default) - Gen1 - Gen2	Configures PCIe speed.

## 5.5.2.4 South Bridge - SATA Drives

Menu Path *Chipset > South Bridge > SATA Drives*

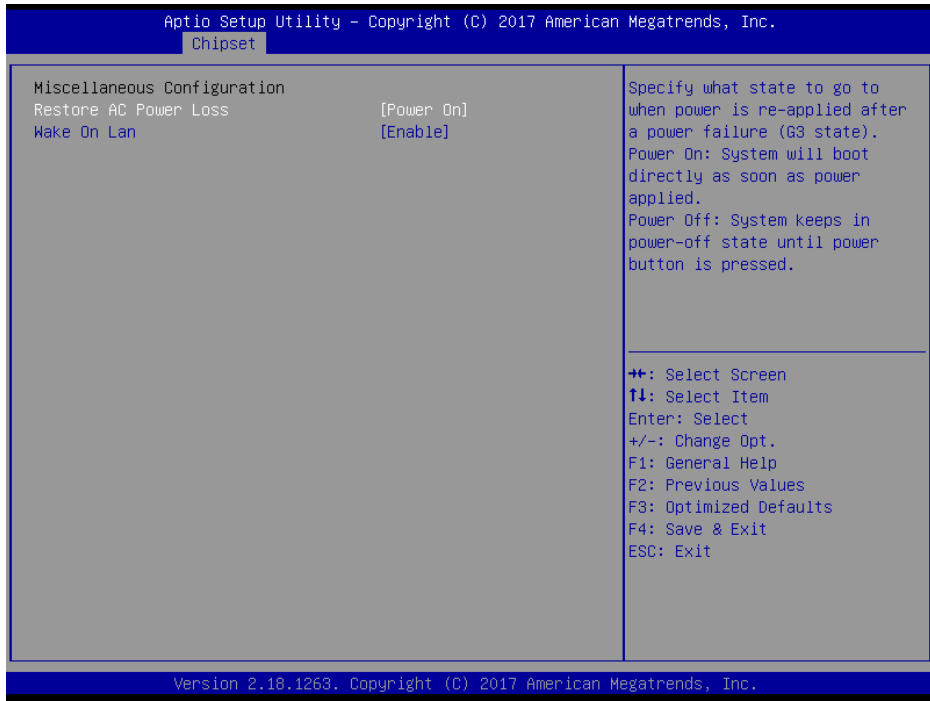

**SATA Drives Screen**

BIOS Setting	Options	Description/Purpose
Chipset SATA	- Enabled (default) - Disabled	Enables/Disables the chipset SATA controller.
SATA Port 0	No changeable options	Displays SATA drive branding information if device exists on port 0.
Port 0	- Disabled - Enabled (default)	Enables/Disables SATA port 0.
SATA Port 1	No changeable options	Displays SATA drive branding information if device exists on port 1.
Port 1	- Disabled - Enabled (default)	Enables/Disables SATA port 1.

## 5.5.2.5 South Bridge - Miscellaneous Configuration

Menu Path *Chipset > South Bridge > Miscellaneous Configuration*

**Miscellaneous Configuration Screen**

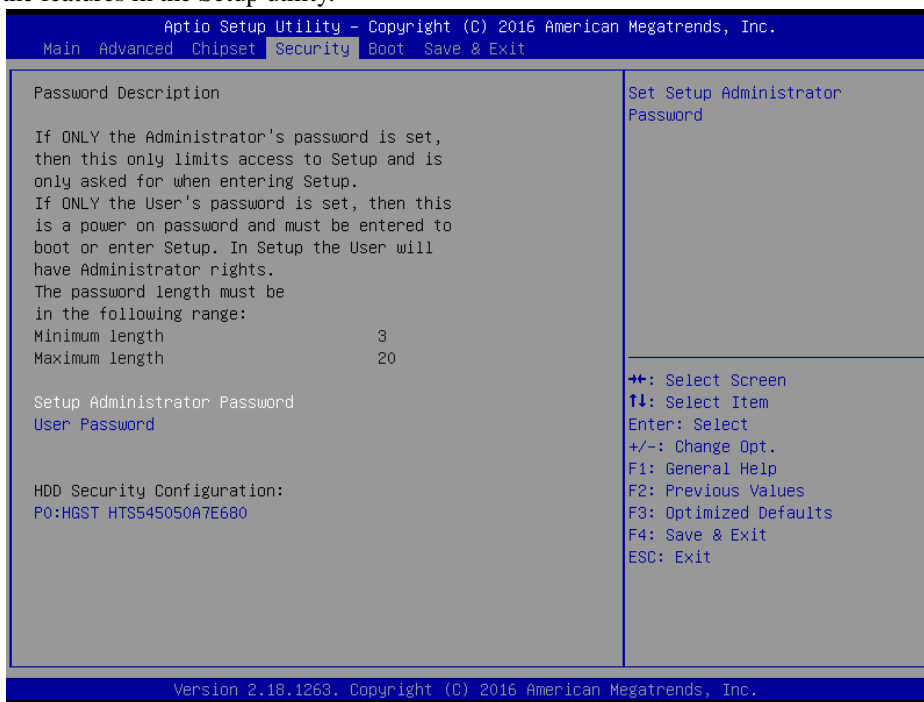

BIOS Setting	Options	Description/Purpose
Restore AC Power Loss	-Power On (default) -Power Off	Specifies what state to go to when power is re-applied after a power failure (G3 state). <ul style="list-style-type: none"> <li><b>Power On:</b> System will boot directly as soon as power applied.</li> <li><b>Power Off:</b> System keeps in power-off state until power button is pressed.</li> </ul>
Wake On Lan	- Disable - Enable (default)	Enables or Disables the Wake On LAN (WOL). Win 8/8.1/10 don't support WOL from hybrid shutdown state (S4). If you want to support WOL from classic shutdown state (S5), please turn off 'fast startup' feature in OS.

## 5.6 Security

Menu Path                      *Security*

From the **Security** menu, you are allowed to create, change or clear the administrator password. You will be asked to enter the configured administrator password before you can access the Setup Utility.

By setting an administrator password, you will prevent other users from changing your BIOS settings. You can configure an Administrator password and then configure a user password. An administrator has much more privileges over the settings in the Setup utility than a user. Heed that a user password does not provide access to most of the features in the Setup utility.

**Security Screen**

BIOS Setting	Options	Description/Purpose
Administrator Password	Password can be 3-20 alphanumeric characters.	Specifies the administrator password.

BIOS Setting	Options	Description/Purpose
User Password	Password can be 3-20 alphanumeric characters.	Specifies the user password.
HDD Security Configuration	Sub-Menu	Enter sub-menu with option to enabled password protected HDD/SSD (if supported by SATA device).

#### **Create an Administrator or User Password**

1. Select the **Administrator Password / User Password** option from the Security menu and press <Enter>, and the password dialog entry box appears.
2. Enter the password you want to create. A password can be 3-20 alphanumeric characters. After you have configured the password, press <Enter> to confirm.
3. Type the new password again and press <Enter>.

#### **Change an Administrator or User Password**

1. Select the **Administrator Password / User Password** option from the Security menu and press <Enter>, and the password dialog entry box appears.
2. Select the Administrator Password or User Password that you want to change. A password can be 3-20 alphanumeric characters. After you have changed the password, press <Enter> to confirm.
3. Type the changed password again and press <Enter>.

#### **Remove an Administrator or User Password**

1. Select the **Administrator Password / User Password** option from the Security menu and press <Enter>, and the password dialog entry box appears.
2. Select the configured Administrator Password or User Password that you want to delete. Leave the dialog box blank and press <Enter>.
3. Press <Enter> again when the password confirmation box appears.

## 5.7 Boot

---

---

### Menu Path *Boot*

---

---

This menu provides control items for setting system boot configuration and boot priorities.

**Boot Screen**

BIOS Setting	Options	Description/Purpose
Setup Prompt Timeout	(Numeric) from 1 to 65535.	Number of seconds to wait for setup activation key.
Bootup NumLock State	- On (default) - Off	Selects the NumLock state after the system is powered on. <ul style="list-style-type: none"> <li>• <b>On:</b> Enables the NumLock function automatically after the system is powered on.</li> <li>• <b>Off:</b> Disables the NumLock function after the system is powered on.</li> </ul>

BIOS Setting	Options	Description/Purpose
Quiet Boot	<ul style="list-style-type: none"> <li>- Disabled (default)</li> <li>- Enabled</li> </ul>	When quiet boot is enabled, it displays AMI or OEM logo (if implemented) instead of POST messages during the boot.
Fast Boot	<ul style="list-style-type: none"> <li>- Disabled (default)</li> <li>- Enabled</li> </ul>	Enables or Disables Fast Boot Options.
OS Selection	<ul style="list-style-type: none"> <li>- Windows (default)</li> <li>- Android</li> <li>- Intel Linux</li> </ul>	Select the target OS.
Boot Option #1~#n	<ul style="list-style-type: none"> <li>- [Drive(s)]</li> <li>- Disabled</li> </ul>	Sets the system boot order.

## 5.8 Save & Exit

---

Menu Path	<i>Save &amp; Exit</i>
-----------	------------------------

---

The **Save & Exit** allows users to save or discard changed BIOS settings as well as load factory default settings.

### Save Changed BIOS Settings

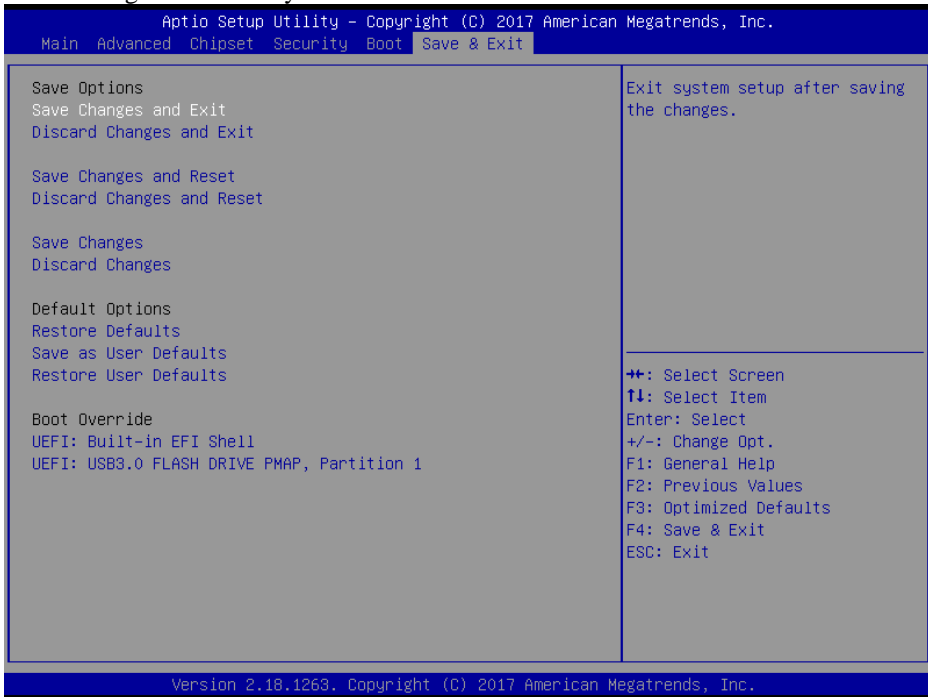

To save and validate the changed BIOS settings, select **Save Changes** from the **Save & Exit** menu, or you can select **Save Changes and Exit** (or press **F4**) to validate the changes and then exit the system. Select **Save Changes and Reset** to validate the changed BIOS settings and then restart the system

### Discard Changed BIOS Settings

To cancel the BIOS settings you have previously configured, select **Discard Changes and Exit** from this menu, or simply press **Esc** to exit the BIOS setup. You can also select **Discard Changes and Reset** to discard any changes you have made and restore the factory BIOS defaults.

### Load User Defaults

You may simply press **F3** at any time to load the **Optimized Values** which resets all BIOS settings to the factory defaults.

**Save & Exit Screen**

<b>BIOS Setting</b>	<b>Options</b>	<b>Description/Purpose</b>
Save Changes and Exit	No changeable options	Exits and saves the changes in NVRAM.
Discard Changes and Exit	No changeable options	Exits without saving any changes made in BIOS settings.
Save Changes and Reset	No changeable options	Saves the changes in NVRAM and resets.
Discard Changes and Reset	No changeable options	Resets without saving any changes made in BIOS settings.
Save Changes	No changeable options	Save Changes done so far to any of the setup options.
Discard Changes	No changeable options	Discard Changes done so far to any of the setup options.
Restore Defaults	No changeable options	Loads the optimized defaults for BIOS settings.
Save as User Defaults	No changeable options	Save the changes done so far as User Defaults.
Restore User Defaults	No changeable options	Restore the User Defaults to all the setup options.
Boot Override	- [Drive(s)]	Forces to boot from selected [drive(s)].

## Configuring WatchDog Timer

The I/O port address of the watchdog timer is 2E (hex) and 2F (hex). 2E (hex) is the address port. 2F (hex) is the data port. User must first assign the address of register by writing address value into address port 2E (hex), then write/read data to/from the assigned register through data port 2F (hex).

### Configuration Sequence

To program F81964 configuration registers, the following configuration sequence must be followed:

#### (1) Enter the extended function mode

To place the chip into the Extended Function Mode, two successive writes of 0x87 must be applied to Extended Function Enable Registers (EFERs, i.e. 2Eh or 4Eh).

#### (2) Configure the configuration registers

The chip selects the Logical Device and activates the desired Logical Devices through Extended Function Index Register (EFIR) and Extended Function Data Register (EFDR). The EFIR is located at the same address as the EFER, and the EFDR is located at address (EFIR+1). First, write the Logical Device Number (i.e. 0x07) to the EFIR and then write the number of the desired Logical Device to the EFDR. If accessing the Chip (Global) Control Registers, this step is not required. Secondly, write the address of the desired configuration register within the Logical Device to the EFIR and then write (or read) the desired configuration register through the EFDR.

#### (3) Exit the extended function mode

To exit the Extended Function Mode, writing 0xAA to the EFER is required. Once the chip exits the Extended Function Mode, it is in the normal running mode and is ready to enter the configuration mode.

## Code example for watch dog timer

Enable the watchdog timer and set the timeout interval to **30** seconds.

```
;----- Enter to extended function mode -----  
mov    dx,      2Eh  
mov    al,      87h

# Flash BIOS Update

## I. Prerequisites

- 1 Prepare a bootable media (e.g. USB storage device) which can boot system to EFI Shell.
- 2 Download and save the BIOS file (e.g. E0970PM1.bin) to the bootable device.
- 3 Copy AMI flash utility –AfuEfix64.efi (v5.08.02.1189) into bootable device.
- 4 Make sure the target system can first boot to the bootable device.
  - (1) Connect the bootable USB device.
  - (2) Turn on the computer and press <ESC> or <DEL> during boot to enter BIOS Setup.
  - (3) The system will go into the BIOS setup menu.
  - (4) Select [**Boot**] menu and set the USB bootable device as the 1st boot device.
  - (5) Press **F4** to save the configuration and exit the BIOS setup menu.

## II. AFUEFI Command for System BIOS Update

AfuEfix64.efi is the AMI firmware update utility; the command line is shown as below:

**AfuEfix64 <ROM File Name> [option1] [option2]...**

User can type “**AfuEfix64/ ?**” to see all the definition of each control options. The recommended options for BIOS ROM update include following parameters:

- /P**: Program main BIOS image.
- /B**: Program Boot Block.
- /N**: Program NVRAM.
- /X**: Don't check ROM ID.

## III. BIOS Update Procedure

- 1** Use the bootable USB storage to boot up the system into the EFI Shell command prompt.
- 2** Type " **AfuEfix64 E097xxxx.bin /p /b /n /x**" and press **Enter** to start the flash procedure.  
(Note that xxxx means the BIOS revision part, e.g. 0PM1...)
- 3** During the update procedure, you will see the BIOS update process status and its percentage. Beware! Do not turn off the system power or reset your computer when the entire update procedure are not complete; otherwise, the BIOS ROM may be crashed and the system will be unable to boot up next time.
- 4** After the BIOS update procedure is completed, the following messages will be shown:

```
fs0:\> AfuEfix64 E0970PM1.bin /p /b /n /x

- 5 Restart the system and boot up with the new BIOS configurations.
- 6 The BIOS Update is completed after the system is restarted.
- 7 Reboot the system and verify if the BIOS version shown on the initialization screen has been updated.
