USER MANUAL

PA-J500

15.6" High Performance
POS Terminal

PA-J500 M8

PA-J500 15.6” High Performance POS Terminal

DISCLAIMER

This user’s manual is meant to assist users in installing and setting up the system. The information contained in this document is subject to change without any notice.

CE NOTICE

This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

FCC NOTICE

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

You are cautioned that any change or modifications to the equipment not expressly approve by the party responsible for compliance could void your authority to operate such equipment.

	**CAUTION:** Danger of explosion may occur when the battery is incorrectly replaced. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

	**WARNING:** Some internal parts of the system may have high electrical voltage. We strongly recommend that only qualified engineers are allowed to service and disassemble the system. If any damages should occur on the system and are caused by unauthorized servicing, it will not be covered by the product warranty.

Contents

Revision History

The revision history of PA-J500 User Manual is described below:

Version No.	Revision History	Date
M8	• The default voltage of Cash Drawer has been revised to “default at **+24V**”. (Page 2-6)	2023/06/15
M7	• The description of Section 3.5.11 Cash Drawer Port (DRW) has been revised. (Page 3-15)	2023/04/25
M6	• Added the descriptions of Cash Drawer Configuration from Page 3-15 to Page 3-17. • Revised the default value of Cash Drawer Voltage Selection JP3 jumper to “24V” on Page 3-30.	2022/04/18
M4	• The spec. of “Option” item under I/O Ports has been revised to: 1 x USB 2.0 or 1 x 24V Power USB **(1A)** or 1 x DC Out **(1A)**.	2022/01/03
M3	• The contents of **Display** and **Option** items of **I/O Ports** have been updated in Section 2.3 System Specifications. • The description of “Proprietary Pin Assignment for Protech Original Display Only” has been updated in Section 3.5.3 1st Display Port (MDP1). • The description of “Proprietary Pin Assignment for Protech Original Display Only” has been updated in Section 3.5.9 2nd Display Port (MDP2). • The description of “Proprietary Pin Assignment for Protech Original Display Only” has been updated in Section 3.8.1 1st Display Port (MDP1).	2021/12/24
M1	Initial Release	2021/10/1

1 Introduction

This chapter provides the introduction for PA-J500 system as well as the framework of the user manual.

The following topic is included:

- About This Manual

1.1 About This Manual

Thank you for purchasing our PA-J500 system. The PA-J500 is an updated system designed to be comparable with the highest performance of IBM AT personal computers. The PA-J500 provides faster processing speed, greater expandability and can handle more tasks than before. This manual is designed to assist you how to install and set up the whole system. It contains 5 chapters and 2 appendixes. Users can configure the system according to their own needs. This user manual is intended for service personnel with strong hardware background. It is not intended for general users.

The following section describes the structure of this user manual.

Chapter 1 Introduction
This chapter introduces the framework of this user manual.

Chapter 2 Getting Started
This chapter describes the package contents and system specifications, and illustrates the physical appearances for PA-J500 system. Read the safety reminders carefully on how to take care of your system properly.

Chapter 3 System Configuration
This chapter describes the locations and functions of the system main board components. You will learn how to properly configure the connectors and system configuration jumpers on the main board and configure the system to meet your own needs.

Chapter 4 Software Utilities
This chapter introduces how to install Intel Chipset Software Installation Utility, Graphics Driver Utility, Intel Management Engine Components Installer Driver Utility, LAN Driver Utility, Serial IO Driver Utility and Sound Driver Utility.

Chapter 5 BIOS Setup
This chapter provides BIOS setup information.

Appendix A System Diagrams
This appendix provides the exploded diagrams and part numbers of PA-J500.

Appendix B Technical Summary
This appendix provides the information about the system block diagram, allocation maps for system resources, Watchdog Timer Configuration and Flash BIOS Update.

2 Getting Started

This chapter provides the introduction for the PA-J500 system as well as the framework of the user manual.

The following topic is included:

- About This Manual
- POS System Illustration
- System Specifications
- Safety precautions

Experienced users can jump to Chapter 3 on page 3-1 for a quick start.

2.1 Package List

If you discover any of the items listed below are damaged or lost, please contact your local distributor immediately.

2.3 System Specifications

System	
CPU Supports	➢ Intel® Core™ i5-1145G7E / i3-1115G4E Pentium® 7505 (fanless) / Celeron® 6305E (fanless)
Memory	➢ 1 x DDR4 260-pin SO-DIMM slot (up to 16GB)
Network	➢ 1 x Giga LAN (RJ45) for 10/100/1000 Mbps ➢ 1 x M.2 (Key E, 2230)
Storage	➢ 1 x M.2 2242 / 1 x M.2 2280
Audio	➢ 1 x 2W speaker
System Weight	➢ **PPC:** 3.6 kg ➢ **POS:** 4.23 kg ➢ **POS + 2nd Display:** 5.33 kg
Dimensions (W x H x D)	➢ **PPC:** 375.68 x 235.51 x 60.5mm ➢ **POS:** 375.68 x 287.43 x 194.95mm ➢ **POS + 2nd Display:** 375.68 x 287.43 x 213.26mm
O.S. Support	➢ Windows 10
Wall Mount Type	➢ VESA 75 x 75mm standard
Storage	
SATA	➢ 1 x M.2 2242 / 1 x M.2 2280, SATA interface
I/O Ports	
Display	➢ 1 x Mini DP for Primary display (for Protech original display only) ➢ 1 x Mini DP for 2nd display (for Protech original display only) ➢ 1 x HDMI 1.4
USB	➢ **Rear I/O:** 2 x USB 2.0 / 2 x USB 3.1 / 1 x USB Type-C ➢ **Side I/O:** USB 2.0
Serial Ports	➢ 2 x RJ45 (all support 5V/12V selectable by jumper) (RS-232 interface)
LAN	➢ 1 x Giga LAN (RJ45) for 10/100/1000 Mbps
Cash Drawer	➢ 1 x RJ11 (+12V or +24V selectable) (default at +24V)
DC In	➢ 1 x 4-pin DC power jack (4pin, DIN)
Option	➢ 1 x USB 2.0 or 1 x 24V Power USB (1A) or 1 x DC Out (1A)

Add-ons	
Customer Display	➢ VFD kit, 20 columns x 2 lines STN LCD display
MSR	➢ JIS I,II, ISO Track1+2+3 (USB interface)
2nd Display	➢ 10.1” with P-cap touch
Fingerprint	➢ Silicon Fingerprint Module (USB interface)
iButton	➢ iButton module (USB interface)
Scanner	➢ **2D:** PDF417, QR Code, Micro QR, Data Matrix
Display	
Primary Display	➢ 15.6”, TFT LCD (Resolution: 1366 x 768 or 1920 x 1080) ➢ Brightness: 220 cd/m²
Touchscreen	➢ Bezel-free P-CAP touch panel (USB interface)
2nd Display	➢ 10.1” Monitor with Touch
Environment	
EMC & Safety	➢ CE / FCC
Operating Temp.	➢ 0°C ~ 35°C (32°F ~ 95°F)
Storage Temp.	➢ -5°C ~ 60°C (23°F ~ 140°F)
Humidity	➢ 20% ~ 90%

2.4 Safety Precautions

Before operating this system, read the following information carefully to protect your systems from damages, and extend the life cycle of the system.

1. Check the Line Voltage
   - The operating voltage for the power supply should be within the range of 100V to 240V AC; otherwise, the system may be damaged.

2. Environmental Conditions
   - Place your PA-J500 on a sturdy, level surface. Be sure to allow enough space around the system to have easy access needs.
   - Avoid installing your PA-J500 system in extremely hot or cold places.
   - Avoid direct sunlight exposure for a long period of time (for example, in a closed car in summer time. Also avoid the system from any heating device.). Or do not use PA-J500 when it has been left outdoors in a cold winter day.
   - Bear in mind that the operating ambient temperature is between 0°C and 35°C (32°F and 95°F).
   - Avoid moving the system rapidly from a hot place to a cold place, and vice versa, because condensation may occur inside the system.
   - Protect your PA-J500 from strong vibrations which may cause hard disk failure.
   - Do not place the system too close to any radio-active device. Radio-active device may cause signal interference.
   - Always shut down the operating system before turning off the power.

3. Handling
   - Avoid placing heavy objects on the top of the system.
   - Do not turn the system upside down. This may cause the hard drive to malfunction.
   - Do not allow any objects to fall into this device.
   - If water or other liquid spills into the device, unplug the power cord immediately.

3 System Configuration

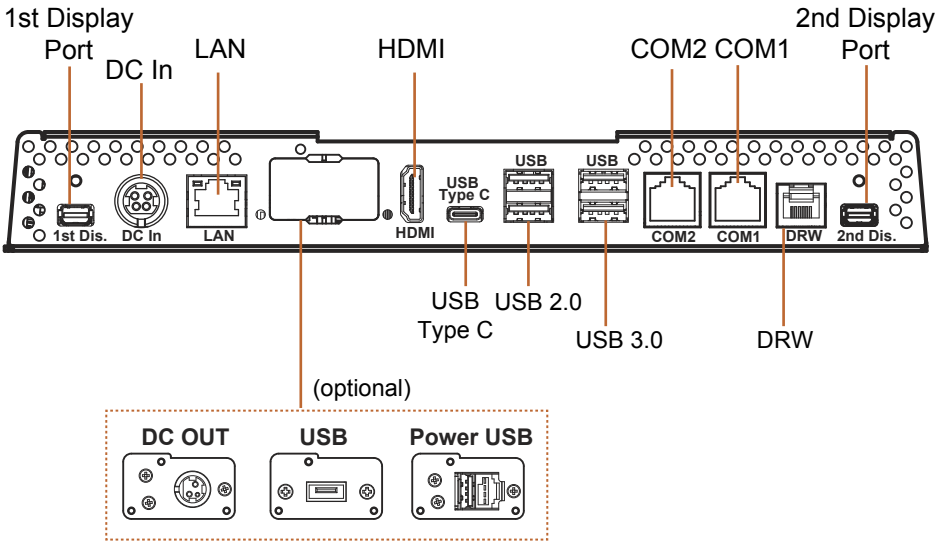
This chapter provides the information for the PA-J500 system. It describes the jumper and connector settings, component locations, and pin assignment.

The following topics are included:

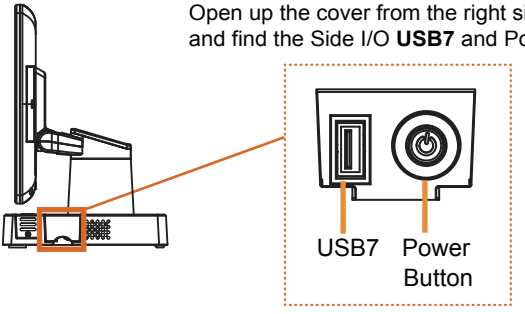
- System External I/O Port Diagram
- Mainboard Component Locations & Jumper Setting
- How to Set Jumpers
- Setting Connectors and Jumpers

3.1 System External I/O Ports Diagram

Rear I/O

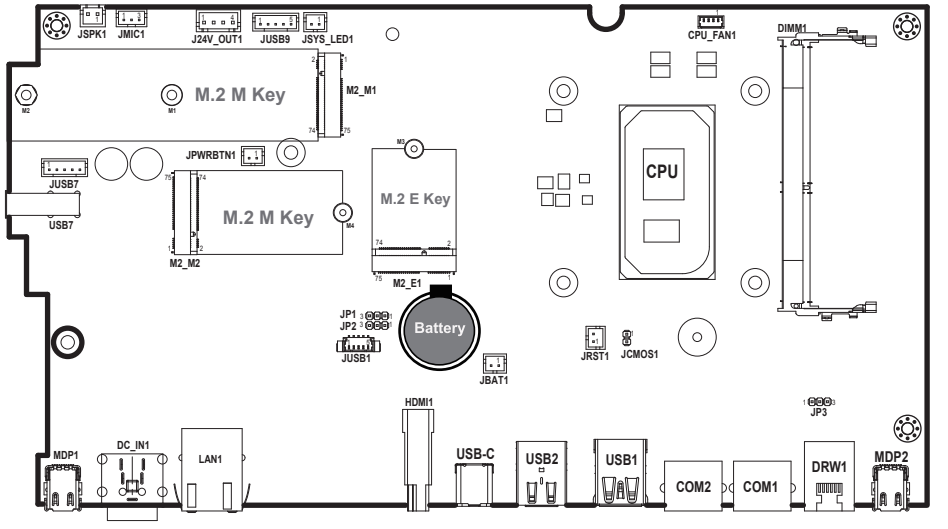


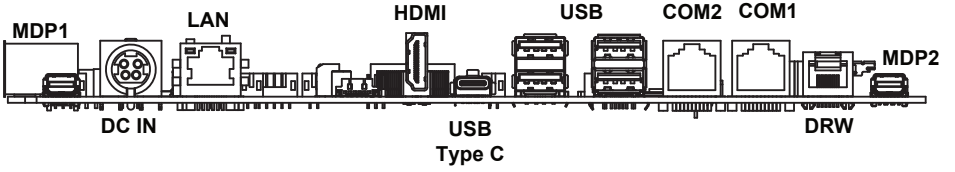
Side I/O



3.2 Mainboard Component Locations & Jumper Setting

M/B: PB-J500



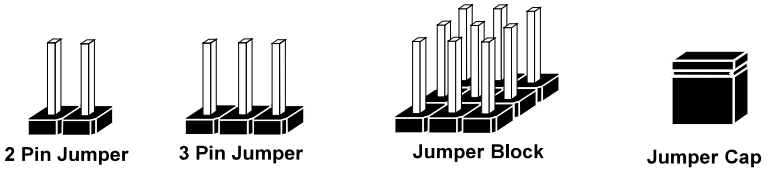


3.3 How to Set Jumpers

You can configure your board by setting the jumpers. A jumper consists of two or three metal pins with a plastic base mounted on the card, and by using a small plastic "cap", also known as the jumper cap (with a metal contact inside), you are able to connect the pins. So you can set-up your hardware configuration by "opening" or "closing" pins.

Jumpers can be combined into sets that called jumper blocks. When jumpers are all in the block, you have to put them together to set up the hardware configuration. The figure below shows what this looks like.

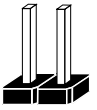
Jumpers & Caps



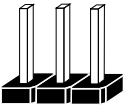
If a jumper has three pins, for example, labeled PIN1, PIN2 and PIN3. You can connect PIN1 and PIN2 to create one setting and shorting. You can also select to connect PIN2 and PIN3 to create another setting. The same jumper diagrams are applied all through this manual. The figure below shows what the manual diagrams look and what they represent.

Jumper diagrams

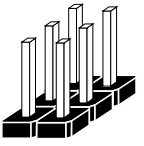
Jumper Cap looks like this



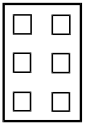
2 pin Jumper looks like this



3 pin Jumper looks like this

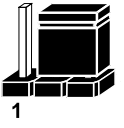


Jumper Block looks like this

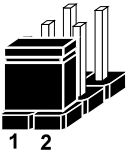


Jumper settings

2 pin Jumper closed(enabled)
looks like this



3 pin Jumper
2-3 pin closed(enabled)
looks like this



Jumper Block
1-2 pin closed(enabled)

3.4 Main Board Connector & Jumper Quick Reference Table

JUMPER	NAME
USB Signal Selection	JP1, JP2
Cash Drawer Voltage Selection	JP3
Clear CMOS Data Selection	JPCMOS1

CONNECTOR	NAME
DC In Connector	DC In
1st Display Port	MDP1
COM Port RS-232 Connector	COM1, COM2
LAN Port Connector	LAN1
USB Type C Port	USB Type C
Dual USB 3.0 Ports	USB1
Dual USB 2.0 Ports	USB2
2nd Display Port	MDP2
HDMI Port Connector	HDMI1
Cash Drawer Port Connector	DRW
Internal USB Wafer	JUSB1, JUSB9
Internal USB Wafer	JUSB7 (co-lay with side I/O USB7)
Speaker Wafer	JSPK1
Microphone Connector	JMIC1
Power Output 24V Wafer	24V_OUT1
System LED Wafer	JSYS_LED1
CPU FAN Wafer	CPU_FAN1
Power Button Wafer	JPWRBTN1
Battery Wafer	JBAT1
System Reset Wafer	JRST1
M.2 M-Key Connector for SSD	M2_M1, M2_M2
M.2 E-Key Connector for Wi-Fi	M2_E1

3.5 Setting Main Board Connectors and Jumpers

3.5.1 Power Switch

Connector Location: Power Switch

Description: To turn on the system, open up the cover from the right side of PA-J500 Box and press the power switch briefly.

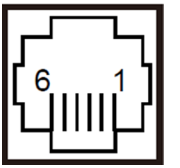
3.5.11 Cash Drawer Port (DRW)

Connector Location: DRW

Description: DRW is used by default. Adopt the method below:

PIN	ASSIGNMENT
1	COM2_DCDJ_I
2	COM2_RX_I
3	COM2_TX_I
4	COM2_DTRJ_I
5	GND
6	COM2_DSRJ_I



DRW

Cash Drawer CONFIGURATION

The I/O port address of the watchdog timer is 2E (hex) and 2F (hex). 2E (hex) is the address port. 2F (hex) is the data port. User must first assign the address of register by writing address value into address port 2E (hex), then write/read data to/from the assigned register through data port 2F (hex).

SIO Address	
Cash drawer Open	LDN06, 0x81, bit1
Cash drawer Status	LDN06, 0x81, bit0

Configuration Sequence

To program F81967 configuration registers, the following configuration sequence must be followed:

(1) Enter the extended function mode

To place the chip into the Extended Function Mode, two successive writes of 0x87 must be applied to Extended Function Enable Registers (EFERs, i.e. 2Eh or 4Eh).

(2) Configure the configuration registers

The chip selects the Logical Device and activates the desired Logical Devices through Extended Function Index Register (EFIR) and Extended Function Data Register (EFDR). The EFIR is located at the same address as the EFER, and the EFDR is located at address (EFIR+1). First, write the Logical Device Number (i.e. 0x07) to the EFIR and then write the number of the desired Logical Device to the EFDR. If accessing the Chip (Global) Control Registers, this step is not required. Secondly, write the address of the desired configuration register within the Logical Device to the EFIR and then write (or read) the desired configuration register through the EFDR.

(3) Exit the extended function mode

To exit the Extended Function Mode, writing 0xAA to the EFER is required. Once the chip exits the Extended Function Mode, it is in the normal running mode and is ready to enter the configuration mode.

Code example for opening the cash drawer

```
; ------------------------ Enter to extended function mode ------------------------------
mov     dx,     2Eh
mov     al,     87h
out     dx,     al
out     dx,     al
; ---------------------- Select Logical Device 6 of Cash Drawer ---------------------
mov     al,     07h
out     dx,     al
inc     dx
mov     al,     06h
out     dx,     al
;--------------------------------Open the Cash Drawer -----------------------------
mov     al,     81h
out     dx,     al
inc     dx
in      al,     dx
or      al,     02h
out     dx,     al
;--------------------------------Close the Cash Drawer -----------------------------
mov     al,     81h
out     dx,     al
inc     dx
in      al,     dx
and     al,     FDh
out     dx,     al
;--------------------------------Exit the extended function mode -------------------------
dec     dx
mov     al,     AAh
out     dx,     al
```

4 Software Utilities

This chapter provides the detailed information that guides users to install driver utilities. The following topics are included:

- Installing Intel® Chipset Software Installation Utility
- Installing Graphics Driver Utility
- Installing Intel® Management Engine Components Driver Installer
- Installing LAN Driver Utility
- Installing Intel® Serial I/O Driver Utility
- Installing Sound Driver Utility

4.1 Introduction

Enclosed with the PA-J500 Series package is our driver utilities, which comes in a DVD-ROM format. Refer to the following table for driver locations

Windows 10 Enterprise 2016 LTSB_64Bit

Filename (Assume that DVD- ROM drive is D :)	Purpose
D:\Driver\Platform\1_Main Chip\Win10(64-bit)	Intel(R) Chipset Device Software installer
D:\Driver\Platform\2_Graphics\Win10 (64-bit)	Intel(R) HD Graphics Driver installer
D:\Driver\Platform\3_ME\Win10 (64-bit)\	Intel(R) Management Engine Driver installer
D:\Driver\Platform\5_LAN Chip\Win10 (64-bit)	Intel(R) LAN Driver installer
D:\Driver\Platform\4_Serial IO\Win10 (64-bit)	Intel(R)Serial IO Driver installer
D:\Driver\Platform\6_sound\Win10 (64-bit)	Realtek(R) ALC888S HD Audio Driver installer

4.1.1 Installing Intel® Chipset Software Installation Utility

Introduction

The Intel® Chipset Software Installation Utility installs the Windows *.INF files to the target system. These files outline to the operating system how to configure the Intel chipset components in order to ensure that the following functions work properly:

- SATA Storage Support (SATA & SATA II)
- USB Support (1.1 & 2.0)
- Identification of Intel® Chipset Components in Device Manager

Intel® Chipset Software Installation Utility

The utility pack is to be installed only for Windows 10 64Bit, and it should be installed immediately after the OS installation is finished. Please follow the steps below:

1. Connect the USB DVD-ROM device to PA-J500 and insert the driver disk.
2. Enter the "**Main Chip"** folder where the Chipset driver is located.
3. Select your Windows 10 platform.
4. Click "**SetupChipset.exe"** file for driver installation.
5. Follow the on-screen instructions to install the driver.
6. Once the installation is completed, shut down the system and restart PA-J500 for the changes to take effect.

4.1.2 Installing Graphics Driver Utility

The GRAPHICS interface embedded in PA-J500 can support a wide range of display types. You can have dual displays via LCD and LVDS interfaces and make the system work simultaneously.

To install the Graphics driver utility, follow the steps below:

1. Connect the USB DVD-ROM device to PA-J500 and insert the driver disk.
2. Enter the "**Graphics**" folder where the driver is located
3. Select your Windows 10 platform.
4. Click the "**igxpin.exe**" file for Windows 10 platform for driver installation.
5. Follow the on-screen instructions to complete the installation.
6. Once the installation is completed, shut down the system and restart PA-J500 for the changes to take effect.

4.1.3 Intel® Management Engine Components Installer Installation

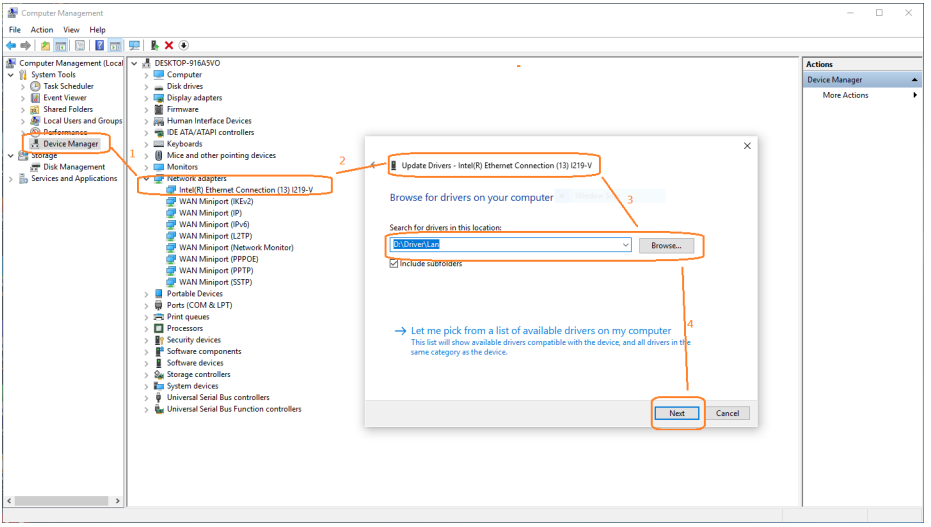
To install the ME Driver, follow the steps below:

1. Connect the USB DVD-ROM device to PA-J500 and insert the driver disk
2. Enter the "**ME**" folder where the driver is located
3. Click "**SetupME.exe**" file for driver installation.
4. Follow the on-screen instructions to install the driver.
5. Once the installation is completed, shut down the system and restart PA-J500 for the changes to take effect.

4.1.4 Installing LAN Driver Utility

Follow the steps below to install LAN Driver:

1. Go to **Computer Management** of your PC and select **Device Manager**.
2. Select **Network adapters > Intel® Ethernet Connection (13) I219-V**.
3. Enter "**D:\Driver\Platform\5_LAN Chip\Win10 (64-bit)**" in the entry box to browse for LAN driver.
4. Click "Next" to continue and follow the on-screen instructions to install the driver.
5. Once the installation is completed, shut down the system and restart PA-J500 for the changes to take effect.



For more details on the installation procedure, refer to the Readme.txt file that you can find on LAN Driver Utility.

4.1.5 Installing Intel® Serial I/O Driver Utility

To install the Serial I/O Driver, follow the steps below:

1. Connect the USB DVD-ROM device to PA-J500 and insert the driver disk.
2. Open the "**Serial IO**" folder where the driver is located.
3. Click the "**SetupSerialIO.exe**" file for driver installation.
4. Follow the on-screen instructions to complete the installation.
5. Once the installation is completed, shut down the system and restart PA-J500 for the changes to take effect.

4.1.6 Installing Sound Driver Utility

The sound function enhanced in this system is fully compatible with Windows 10.

To install the Sound Driver, follow the steps below:

1. Connect the USB DVD-ROM device to PA-J500 and insert the driver disk.
2. Open the "**sound**" folder where the driver is located.
3. Click the "**Setup.exe**" file for driver installation.
4. Follow the on-screen instructions to complete the installation.
5. Once the installation is completed, shut down the system and restart PA-J500 for the changes to take effect.

5 BIOS SETUP

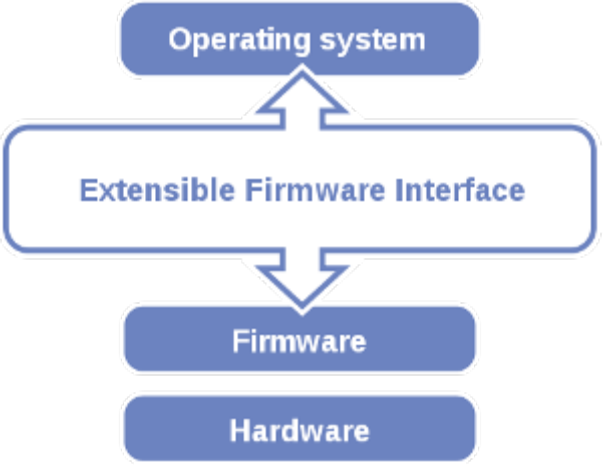
This chapter guides users how to configure the basic system configurations via the BIOS Setup Utilities. The information of the system configuration is saved in BIOS NVRAM so that the Setup information is retained when the system is powered off. The BIOS Setup Utilities consist of the following menu items:

- Main Menu
- Advanced Menu
- Chipset Menu
- Security Menu
- Boot Menu
- Save & Exit Menu

5.1 Introduction

The **PA-J500** uses an AMI Aptio BIOS that is stored in the Serial Peripheral Interface Flash Memory (SPI Flash) and can be updated. The SPI Flash contains the BIOS Setup program, Power-on Self-Test (POST), the PCI auto-configuration utility, LAN EEPROM information, and Plug and Play support.

Aptio is AMI's BIOS firmware based on the UEFI (Unified Extensible Firmware Interface) Specifications and the Intel Platform Innovation Framework for EFI. The UEFI specification defines an interface between an operating system and platform firmware. The interface consists of data tables that contain platform-related information, boot service calls, and runtime service calls that are available to the operating system and its loader. These elements provide standard environment for booting an operating system and running pre-boot applications. The following diagram shows the Extensible Firmware Interface's location in the software stack.



Extensible Firmware Interface Diagram

EFI BIOS provides an user interface allow users the ability to modify hardware configuration, e.g. change the system date and time, enable or disable a system component, decide bootable device priorities, setup personal password, etc., which is convenient for modifications and customization of the computer system and allows technicians another method for finding solutions if hardware has any problems.

The BIOS Setup program can be used to view and change the BIOS settings for the computer. The BIOS Setup program is accessed by pressing the <Del> or <ESC> key after the POST memory test begins and before the operating system boot begins. The settings are shown below.

Users will need to set up the system configuration from the BIOS Setup Utility when any of the following conditions occurs:

1. You are starting your system for the first time.
2. You have changed the hardware in your system or the hardware becomes faulty.
3. The system configuration is reset after the user configures to clear CMOS data via the JPCMOS1 jumper.
4. The power of the CMOS RAM became lost and the system configuration has been erased.

All the menu settings are described in details in this chapter.

5.1.1.1 Accessing Setup Utility

When the system is powered on, the BIOS will enter the Power-On Self Test (POST) routines and the following message will appear on the lower screen:

POST Screen with AMI Logo

As long as this message is present on the screen you may press the <Del> key (the one that shares the decimal point at the bottom of the number keypad) to access the Setup program. In a moment, the main menu of the Aptio Setup Utility will appear on the screen:

BIOS Setup Menu Initialization Screen

You may move the cursor by up/down keys to highlight the individual menu items. As you highlight each item, a brief description of the highlighted selection will appear at the bottom of the screen.

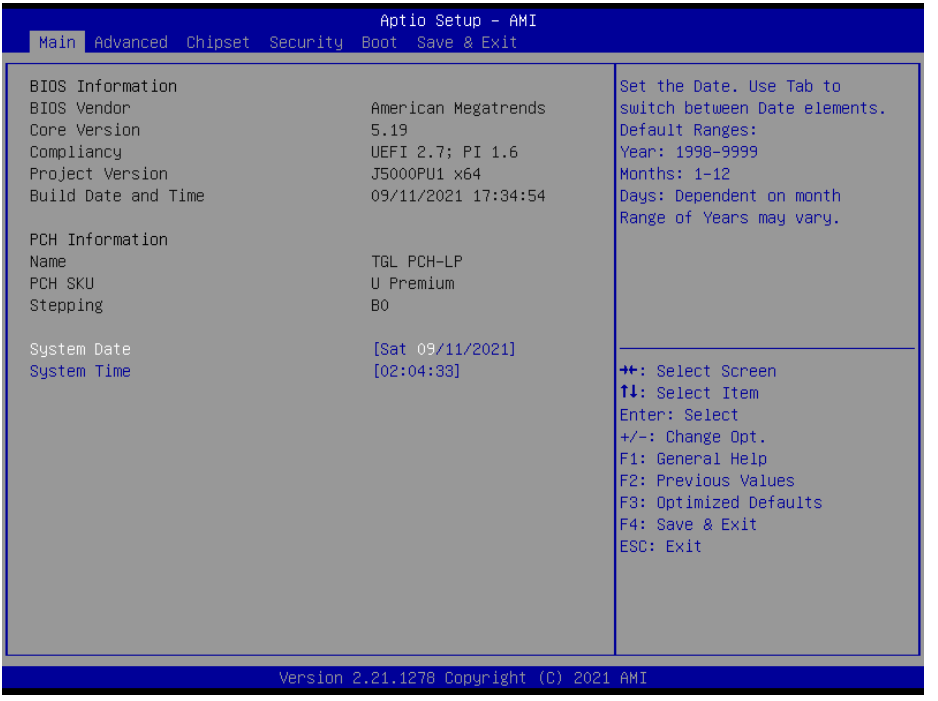
The language of the BIOS setup menu interface and help messages are shown in US English. You may use <↑> or <↓> key to select among the items and press <Enter> to confirm and enter the sub-menu. The following table provides the list of the navigation keys that you can use while operating the BIOS setup menu.

BIOS Setup Navigation Key	Description
<←> and <→>	Select a different menu screen (move the cursor from the selected menu to the left or right).
<↑> and <↓>	Select a different item (move the cursor from the selected item upwards or downwards)
<Enter>	Execute the command or select the sub-menu.
<F2>	Load the previous configuration values.
<F3>	Load the default configuration values.
<F4>	Save the current values and exit the BIOS setup menu.
<Esc>	Close the sub-menu. Trigger the confirmation to exit BIOS setup menu.

5.1.2 Main

Menu Path *Main*

The **Main** menu allows you to view the BIOS Information and change the system date and time. Use tab to switch between date elements. Use <↑> or <↓> arrow keys to highlight the item and enter the value you want in each item. This screen also displays the BIOS version (project) and BIOS Build Date and Time.



BIOS Main Menu

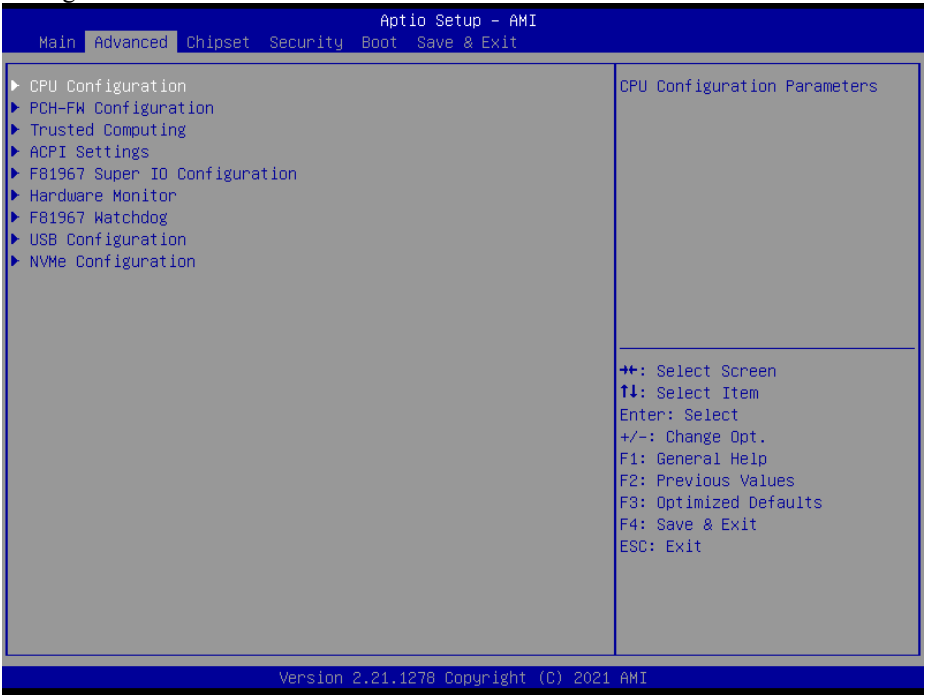
BIOS Setting	Options	Description/Purpose
BIOS Vendor	No changeable options	Displays the BIOS vendor.
Core Version	No changeable options	Displays the current BIOS core version.
Compliancy	No changeable options	Displays the current UEFI version.
Project Version	No changeable options	Displays the version of the BIOS currently installed on the platform.
Build Date and Time	No changeable options	Displays the date of the current BIOS version.
Name	No changeable options	Displays the name of the PCH
PCH SKU	No changeable options	Displays the SKU for the PCH

BIOS Setting	Options	Description/Purpose
Stepping	No changeable options	Displays the stepping of the PCH
System Date	month, day, year	Sets the current date. The format is [Day Month/Date/ Year]. Users can directly enter values or use <+> or <-> arrow keys to increase/decrease it. The "Day" is automatically changed.
System Time	hour, minute, second	Sets the clock of the system. The format is [Hour: Minute: Second]. Users can directly enter values or use <+> or <-> arrow keys to increase/decrease it.

5.1.3 Advanced

Menu Path *Advanced*

This menu provides advanced the sub-menu items such as CPU Configuration, PCH-FW Configuration, Trusted Computing, ACPI Settings, F81967 Super IO Configuration, Hardware Monitor, F81967 Watchdog, USB Configuration and NVMe Configuration.



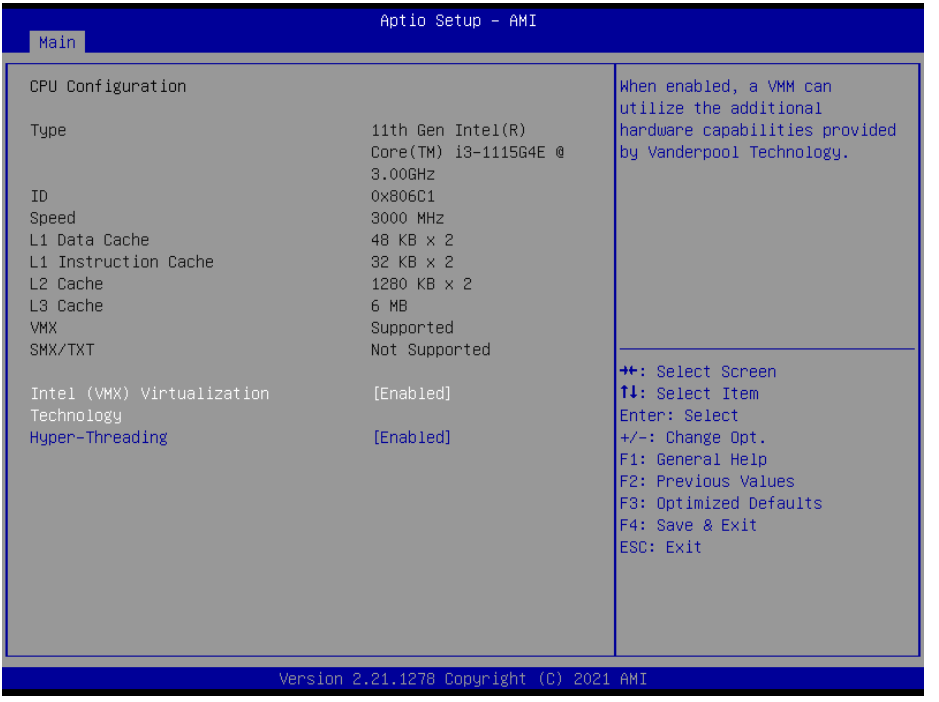
BIOS Advanced Menu

BIOS Setting	Options	Description/Purpose
CPU Configuration	Sub-Menu	CPU Configuration Parameters.
PCH-FW Configuration	Sub-Menu	Management Engine Technology Parameters.
Trusted Computing	Sub-Menu	Trusted Computing Settings.
ACPI Settings	Sub-Menu	System ACPI Parameters.
F81967 Super IO Configuration	Sub-Menu	System Super IO Chip parameters.
Hardware Monitor	Sub-Menu	Monitor hardware status
F819676 Watchdog	Sub-Menu	F81967 Watchdog parameters
USB Configuration	Sub-Menu	USB Configuration Parameters.
NVMe Configuration	Sub-Menu	NVMe Device Options Settings.

5.1.3.1 Advanced - CPU Configuration

Menu Path *Advanced > CPU Configuration*

The **CPU Configuration** provides advanced CPU settings and some information about CPU.



CPU Configuration Screen

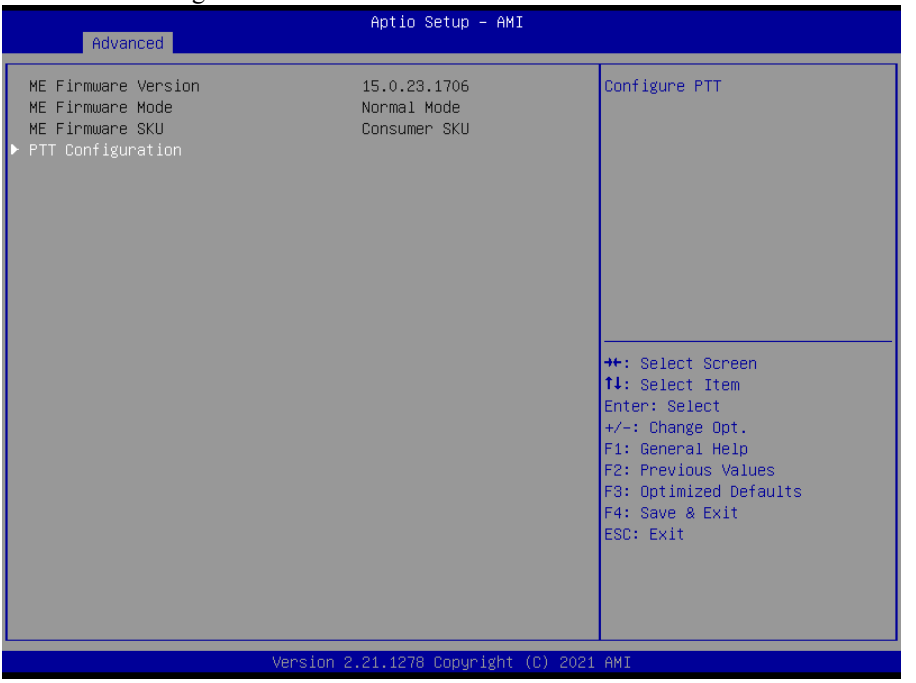
BIOS Setting	Options	Description/Purpose
Type	No changeable options	Displays the CPU Type.
ID	No changeable options	Displays the CPU ID.
Speed	No changeable options	Displays the CPU Speed.
L1 Data Cache	No changeable options	Displays the size of L1 Data Cache
L1 Instruction Cache	No changeable options	Displays the size of L1 Instruction Cache
L2 Cache	No changeable options	Displays the size of L2 Cache.
L3 Cache	No changeable options	Displays the size of L3 Cache.
VMX	No changeable options	CPU/VMX hardware support for virtual machines.

BIOS Setting	Options	Description/Purpose
SMX/TXT	No changeable options	Secure Mode extensions support.
Intel (VMX) Virtualization Technology	- Disabled - Enabled (Default)	When enabled, VMM can utilize the additional hardware capabilities provided by Vanderpool Technology
Hyper-Threading	- Disabled - Enabled (Default)	When Disabled, only one thread per enabled core is enabled.

5.1.3.2 Advanced - PCH-FW Configuration

Menu Path *Advanced > PCH-FW Configuration*

The **PCH-FW** allows users to view the information about ME (Management Engine) firmware information, such ME firmware version, firmware mode and firmware SKU, and set PTT configuration.

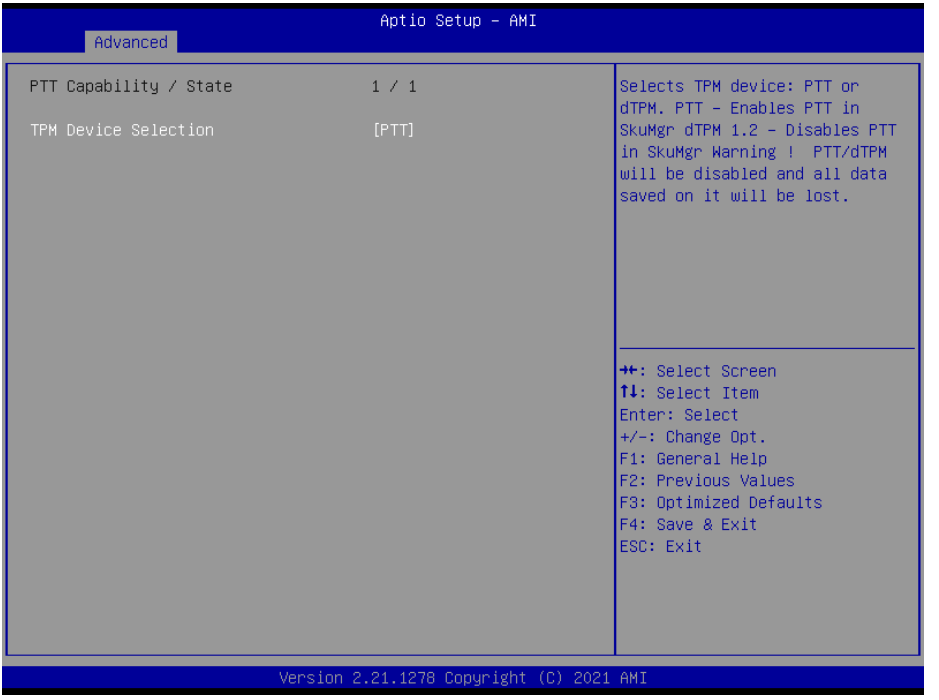


PCH-FW Configuration Screen

BIOS Setting	Options	Description/Purpose
ME Firmware Version	No changeable options	Displays the ME Firmware Version.
ME Firmware Mode	No changeable options	Displays the ME Firmware Mode.
ME Firmware SKU	No changeable options	Displays the ME Firmware SKU.

Advanced - PCH-FW Configuration - PTT Configuration

Menu Path *Advanced > PCH-FW Configuration > PTT Configuration*



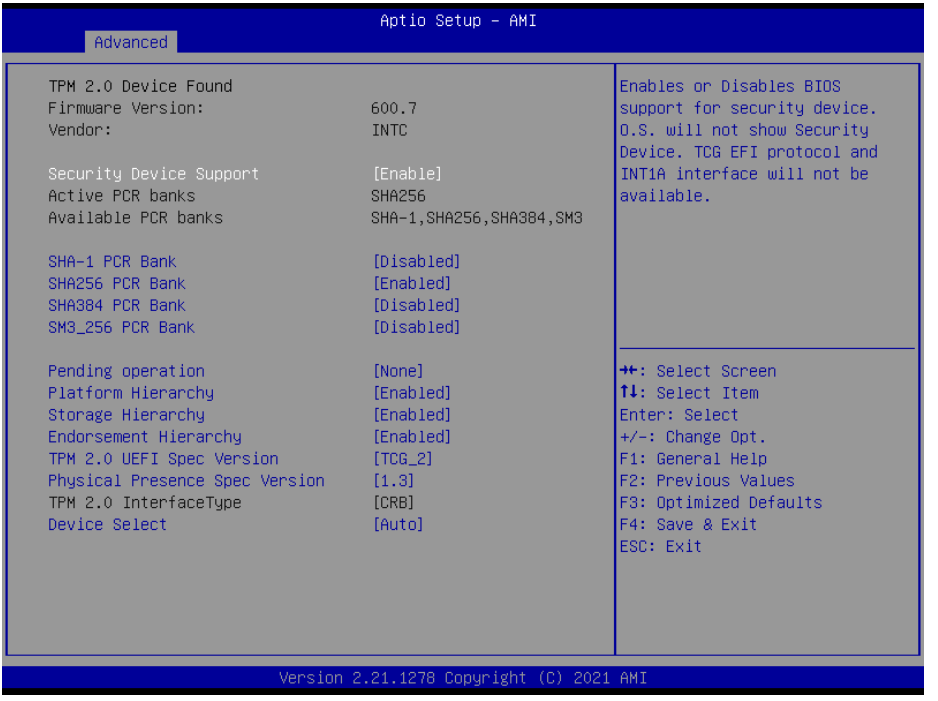
PTT Configuration Screen

BIOS Setting	Options	Description/Purpose
TPM Device Selection	- PTT (Default) - dTPM	Selects TPM device: PTT or dTPM.

5.1.3.3 Advanced - Trusted Computing

Menu Path *Advanced > Trusted Computing*

The **Trusted Computing** allows users to enable / disable BIOS support for security device. The operating system will now show Security Device. The TCG EFI protocol and INT1A interface will not be available.



Trusted Computing Screen

*Trusted Computing Screen function is for "CPU I5-7300U" SKU only.

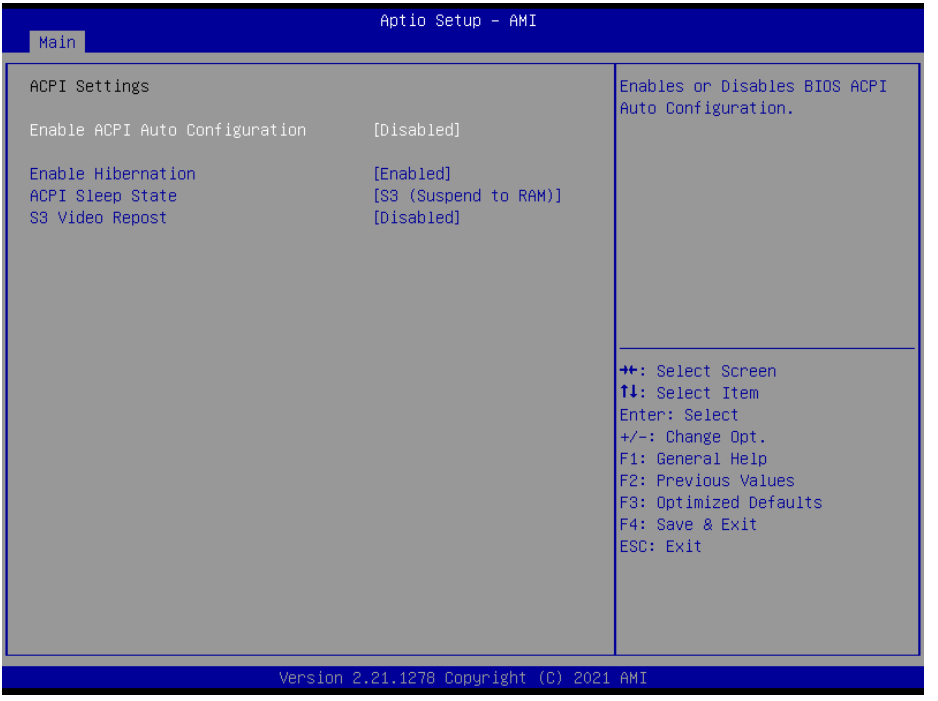
BIOS Setting	Options	Description/Purpose
Firmware Version	No changeable options	Displays the Firmware Version.
Vendor	No changeable options	Displays the Vendor.
Security Device Support	- Disabled - Enabled (Defaults)	Enables or Disables BIOS support for security device. O.S. will not show Security Device. TCG EFI protocol and INT1A interface will not be available.
Active PCR banks	No changeable options	Displays the Active PCR banks.
Available PCR banks	No changeable options	Displays the Available PCR banks.
SHA-1 PCR Bank	- Disabled (Defaults) - Enabled	Enables or Disables SHA-1 PCR Bank.
SHA256 PCR Bank	- Disabled	Enables or Disables SHA256 PCR Bank.

BIOS Setting	Options	Description/Purpose
	- Enabled (Default)	
SHA384 PCR Bank	- Disabled (Default) - Enabled	Enables or Disables SHA384 PCR Bank.
SM3_256 PCR Bank	- Disabled (Default) - Enabled	Enables or Disables SM3_256 PCR Bank.
Pending operation	- None (Default) - TPM Clear	Schedules an Operation for the Security Device. NOTE: Your Computer will reboot during restart in order to change State of Security Device.
Platform Hierarchy	- Disabled - Enabled (Default)	Enables or Disables the Platform Hierarchy.
Storage Hierarchy	- Disabled - Enabled (Default)	Enabled or Disabled the Storage Hierarchy.
Endorsement Hierarchy	- Disabled - Enabled (Default)	Enabled or Disabled the Endorsement Hierarchy.
TPM2.0 UEFI Spec Version	- TCG_1_2 - TCG_2 (Default)	Selects the TCG2 Spec Version Support, TCG_1_2: the Compatible mode for Win8/Win10, TCG_2: Support new TCG2 protocol and event format for Win10 or later.
Physical Presence Spec Version	- 1.2 - 1.3 (Default)	Selects to Tell O.S to support PPI Spec Version 1.2 or 1.3. Note some HCK tests might not support 1.3.
TPM 2.0 InterfaceType	No changeable options	Display the TPM 20 InterfaceType.
Device Select	- TPM 1.2 - TPM 2.0 - Auto (Default)	TPM 1.2 will restrict support to TPM 1.2 devices, TPM 2.0 will restrict support to TPM 2.0 devices, Auto will support both with the default set to TPM 2.0 devices if not found, TPM 1.2 devices will be enumerated.

5.1.3.4 Advanced - ACPI Settings

Menu Path *Advanced > ACPI Settings*

The **ACPI Settings** allows users to configure relevant ACPI (Advanced Configuration and Power Management Interface) settings, such as enable / disable ACPI Auto Configuration, enable / disable Hibernation, ACPI Sleep State and S3 Video Repost.



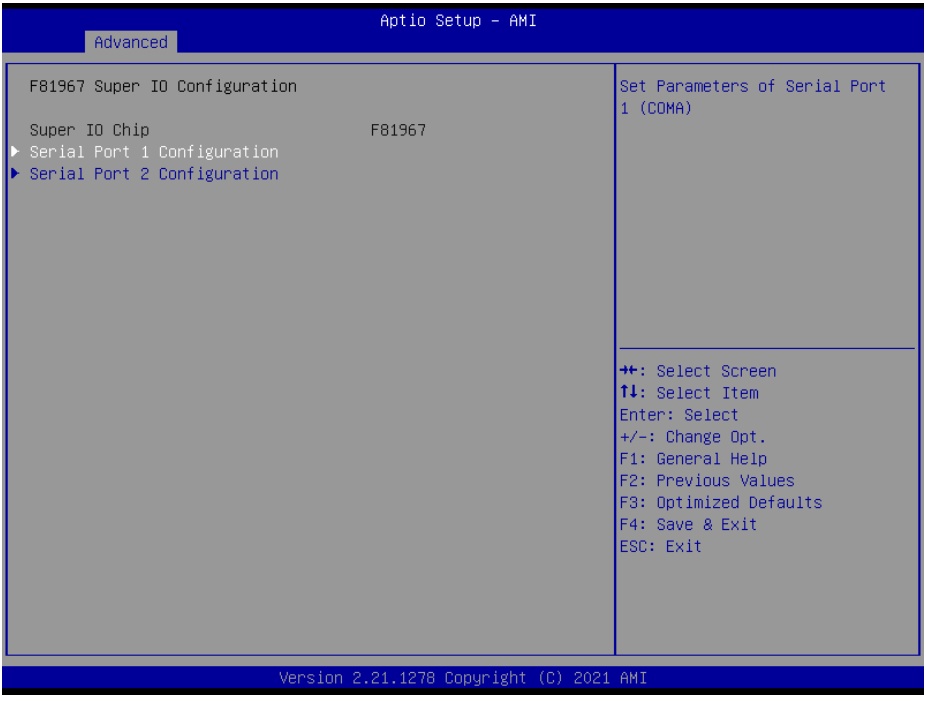
ACPI Settings Screen

BIOS Setting	Options	Description/Purpose
Enable ACPI Auto Configuration	- Disabled (Default) - Enabled	Enables or Disables BIOS ACPI Auto Configuration
Enable Hibernation	- Disabled - Enabled	Enables or disables the system's ability to hibernate (OS / S4 Sleep State). This option may be not effective with some OS.
ACPI Sleep State	- Suspend Disabled - S3 (Suspend to RAM)	Selects the highest ACPI sleep state the system will enter when the SUSPEND button is pressed.
S3 Video Repost	- Disabled - Enabled	Enables or Disables S3 Video Repost.

5.1.3.5 Advanced - F81967 Super IO Configuration

Menu Path *Advanced > F81967 Super IO Configuration*

The **F81967 Super IO Configuration** allows users to configure the serial ports 1-2.

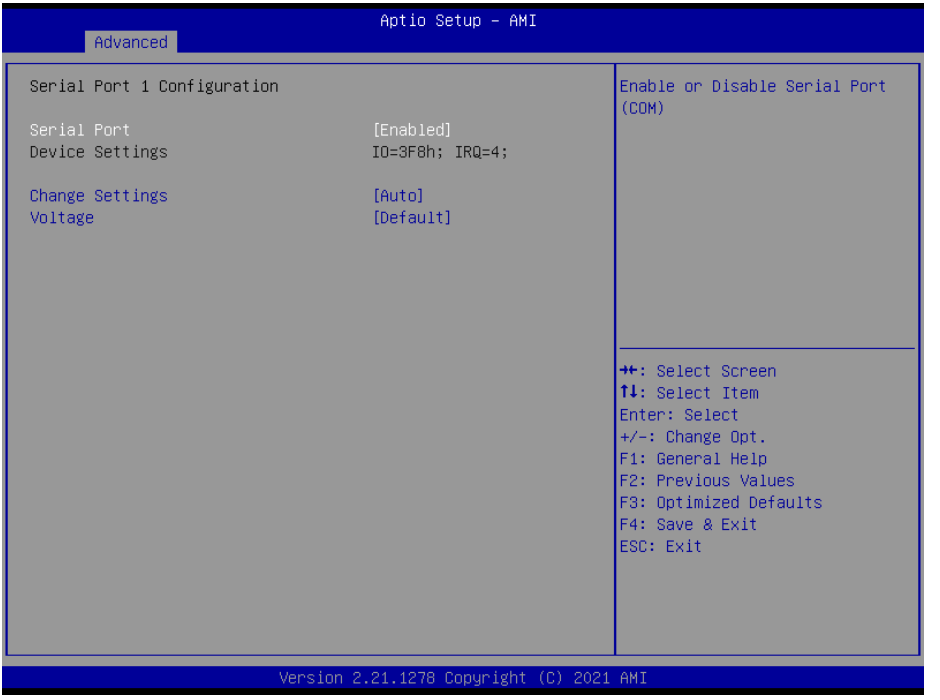


F81967 Super IO Configuration Screen

BIOS Setting	Options	Description/Purpose
Serial Port 1 Configuration	Sub-Menu	Configure the parameters of Serial Port 1 (COMA).
Serial Port 2 Configuration	Sub-Menu	Configure the parameters of Serial Port 2 (COMB).

F81967 Super IO Configuration – Serial Port 1 Configuration

Menu Path *Advanced > F81967 Super IO Configuration > Serial Port 1 Configuration*

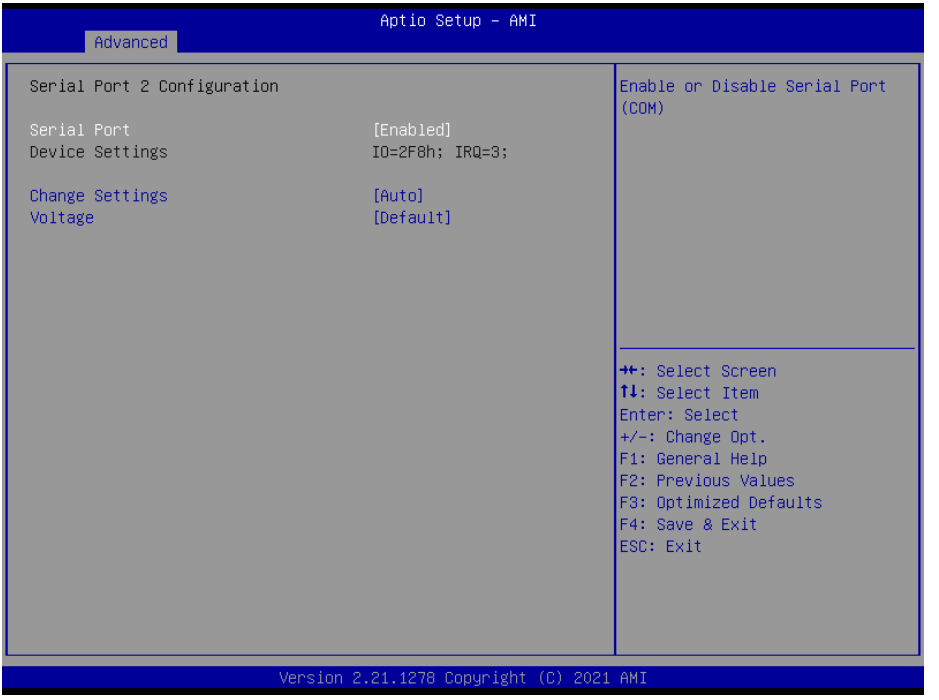


Serial Port 1 Configuration Screen

BIOS Setting	Options	Description/Purpose
Serial Port	- Disabled - Enabled (Default)	Enables or disables Serial Port 1.
Device Settings	No changeable options	Displays the current settings of Serial Port 1.
Change Settings	- Auto (Default) - IO=3F8h; IRQ=4; - IO=3F8h; IRQ=3,4,5,6,7,10,11; - IO=2F8h; IRQ=3,4,5,6,7,10,11; - IO=3E8h; IRQ=3,4,5,6,7,10,11; - IO=2E8h; IRQ=3,4,5,6,7,10,11;	Selects IRQ and I/O resource settings for Serial Port 1.
Voltage	- RI (Default) - 5V - 12V	Selects COM port voltage

F81967 Super IO Configuration – Serial Port 2 Configuration

Menu Path *Advanced > F81967 Super IO Configuration > Serial Port 2 Configuration*



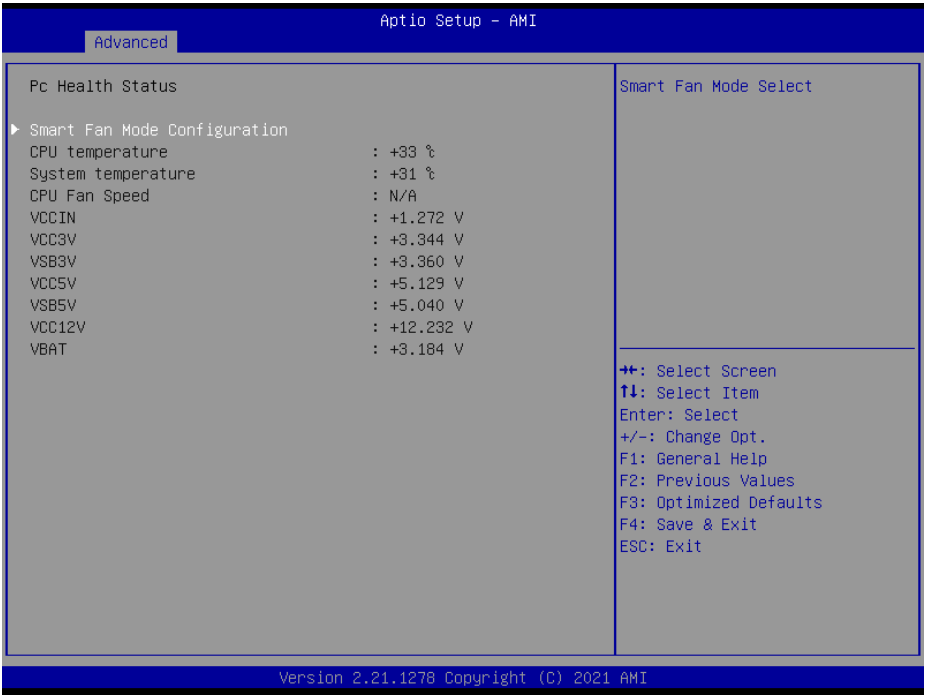
Serial Port 2 Configuration Screen

BIOS Setting	Options	Description/Purpose
Serial Port	- Disabled - Enabled	Enables or disables Serial Port 2.
Device Settings	No changeable options	Displays the current settings of Serial Port 2.
Change Settings	- Auto (Default) - IO=2F8h; IRQ=3; - IO=3F8h; IRQ=3,4,5,6,7,10,11; - IO=2F8h; IRQ=3,4,5,6,7,10,11; - IO=3E8h; IRQ=3,4,5,6,7,10,11; - IO=2E8h; IRQ=3,4,5,6,7,10,11;	Selects IRQ and I/O resource for the serial port 2.
Voltage	- RI (Default) - 5V - 12V	Selects COM port voltage

5.1.3.6 Advanced - Hardware Monitor

Menu Path *Advanced > Hardware Monitor*

The **Hardware Monitor** allows users to monitor the health and status of the system such as CPU temperature, system temperature, CPU fan speed, and voltage levels in supply.



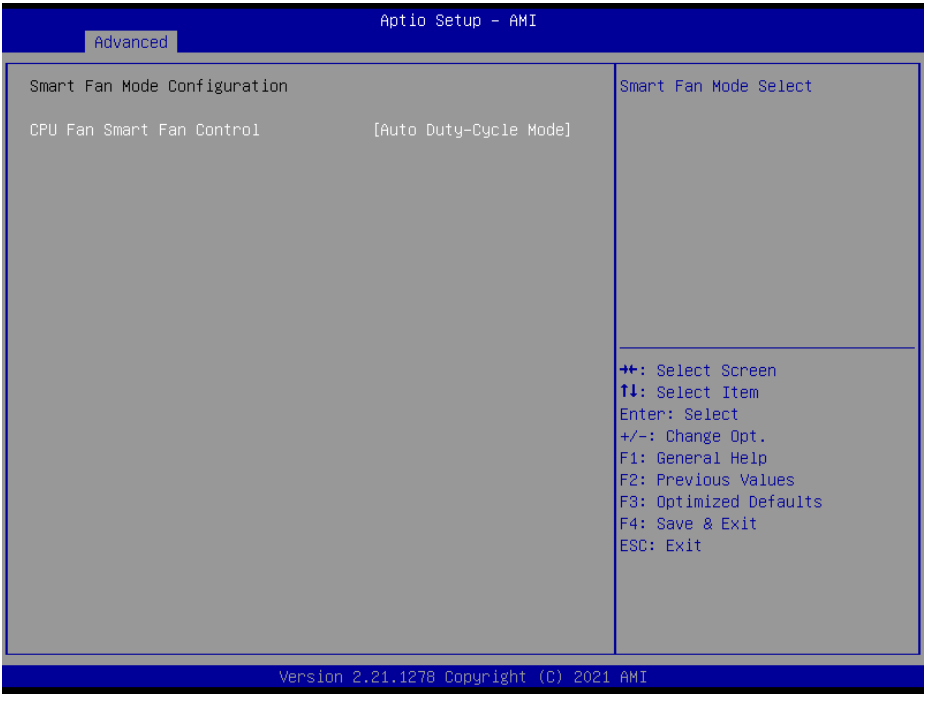
Hardware Monitor Screen

BIOS Setting	Options	Description/Purpose
Smart Fan Mode Configuration	Sub-Menu	Smart Fan Mode Selection. **Note:** No CPU Fan is used on PA-J500.
CPU temperature	No changeable options	Displays the processor's temperature.
System temperature	No changeable options	Displays the system's temperature.
CPU Fan Speed	No changeable options	Displays CPU Fan speed. **Note:** Because no CPU Fan is used on PA-J500, so "**N/A**" is shown for this item.
VCCIN	No changeable options	Detects and displays the voltage level of VCCIN in supply.

BIOS Setting	Options	Description/Purpose
VCC3V	No changeable options	Detects and displays the voltage level of VCC3V in supply.
VSB3V	No changeable options	Detects and displays the voltage level of VSB3V in supply.
VCC5V	No changeable options	Detects and displays the voltage level of VCC5V in supply.
VSB5V	No changeable options	Detects and displays the voltage level of VSB5V in supply.
VCC12V	No changeable options	Detects and displays the voltage level of VCC12 in supply.
VBAT	No changeable options	Detects and displays the voltage level of VBAT in supply.

Smart Fan Mode Configuration

Menu Path *Advanced > Hardware Monitor > Smart Fan Mode Configuration*



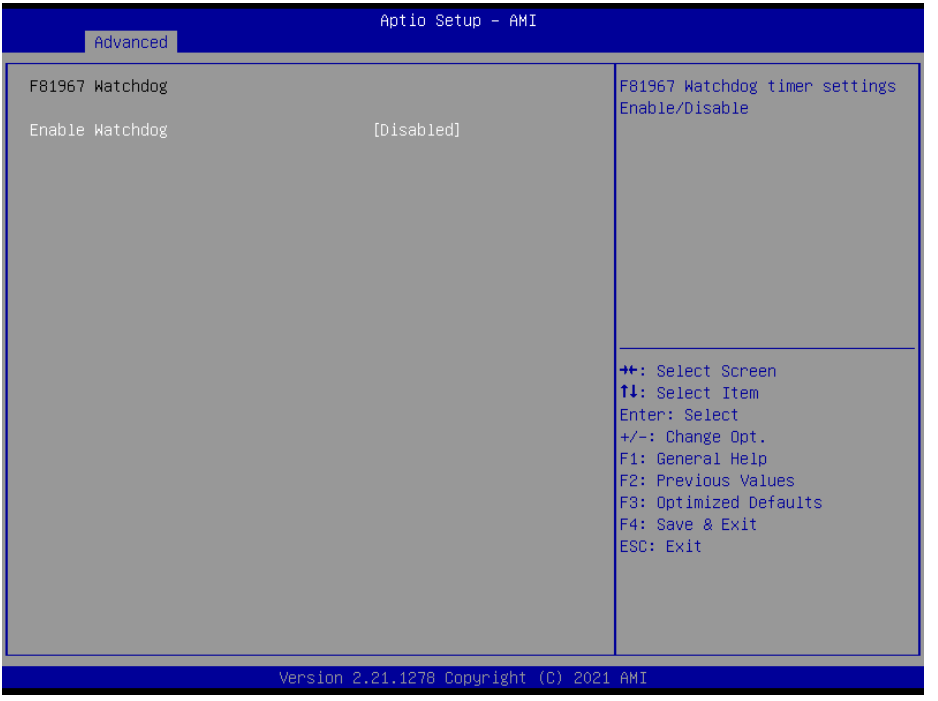
Smart Fan Mode Configuration Screen

BIOS Setting	Options	Description/Purpose
CPU Fan Smart Fan Control	- Manual Duty Mode - Auto Duty-Cycle Mode	Smart Fan Mode select for CPU Fan.
Manual Duty Mode	Numeric (from 1 to 100)	Manual mode fan control, user can write expected duty cycle (PWM fan type) 1-100.

5.1.3.7 Advanced - F81967 Watchdog

Menu Path *Advanced > F81967 Watchdog*

If the system hangs or fails to respond, enable the F81967 watchdog function to trigger a system reset via the 255-level watchdog timer.



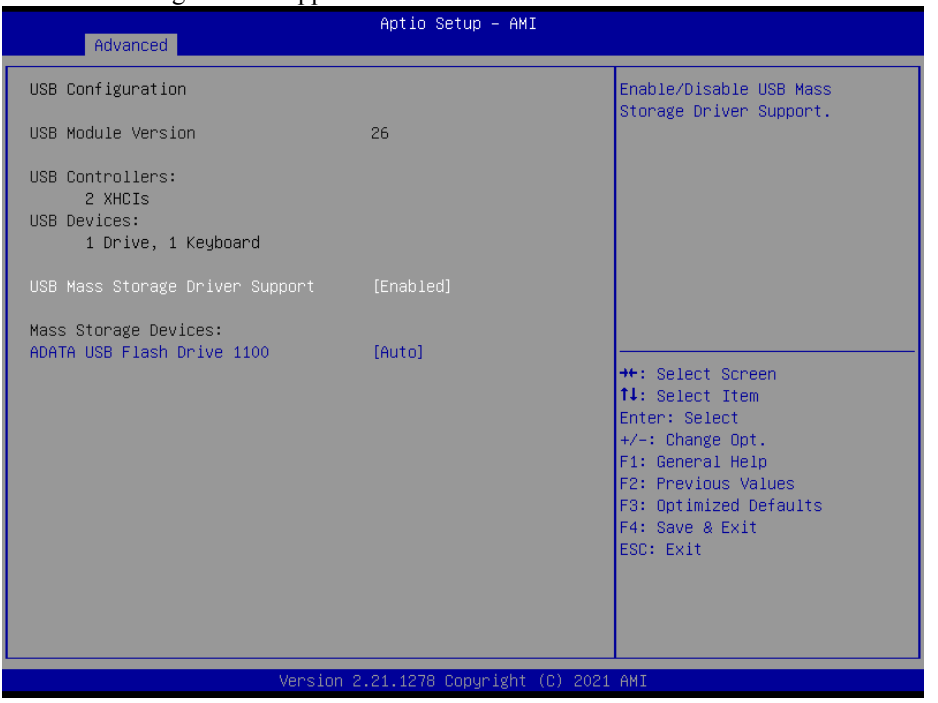
F81967 Watchdog Screen

BIOS Setting	Options	Description/Purpose
Enable Watchdog	- Enabled - Disabled (Default)	Enables / Disables F81967 Watchdog timer.
Watchdog Timer Count	Numeric (from 1 to 255)	The number of count for Timer.

5.1.3.8 Advanced - USB Configuration

Menu Path *Advanced > USB Configuration*

The **USB Configuration** allows users to configure advanced USB settings such as USB mass storage driver support.



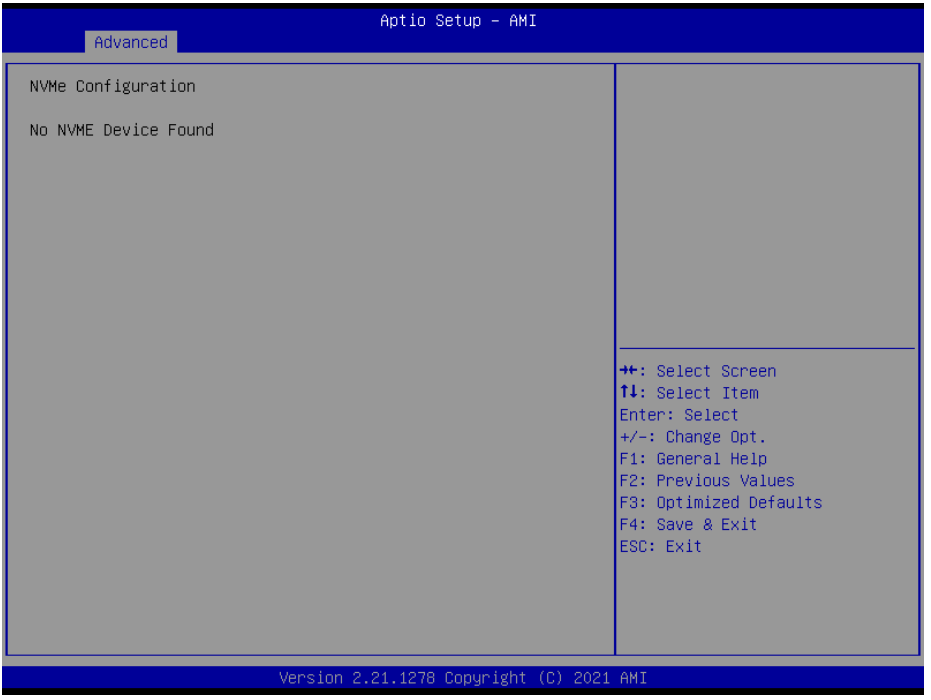
USB Configuration Screen

BIOS Setting	Options	Description/Purpose
USB Module Version	No changeable options	Displays USB module version.
USB Controllers	No changeable options	Displays number and type of USB controllers (if any).
USB Devices	No changeable options	Displays number and type of connected USB devices (if any).
USB Mass Storage Driver Support	- Disabled - Enabled (Default)	Enables / Disables USB Mass Storage Driver Support.
Mass Storage Devices: [drive(s)]	- Auto (Default) - Floppy - Forced FDD - Hard Disk - CD-ROM	**'AUTO'** enumerates devices according to their media format. Optical drives are emulated as **'CD-ROM'**. Drives with no media will be emulated according to a drive type.

5.1.3.9 Advanced - NVMe Configuration

Menu Path *Advanced > NVMe Configuration*

The **NVMe Configuration** allows users to view the information about NVMe Device.



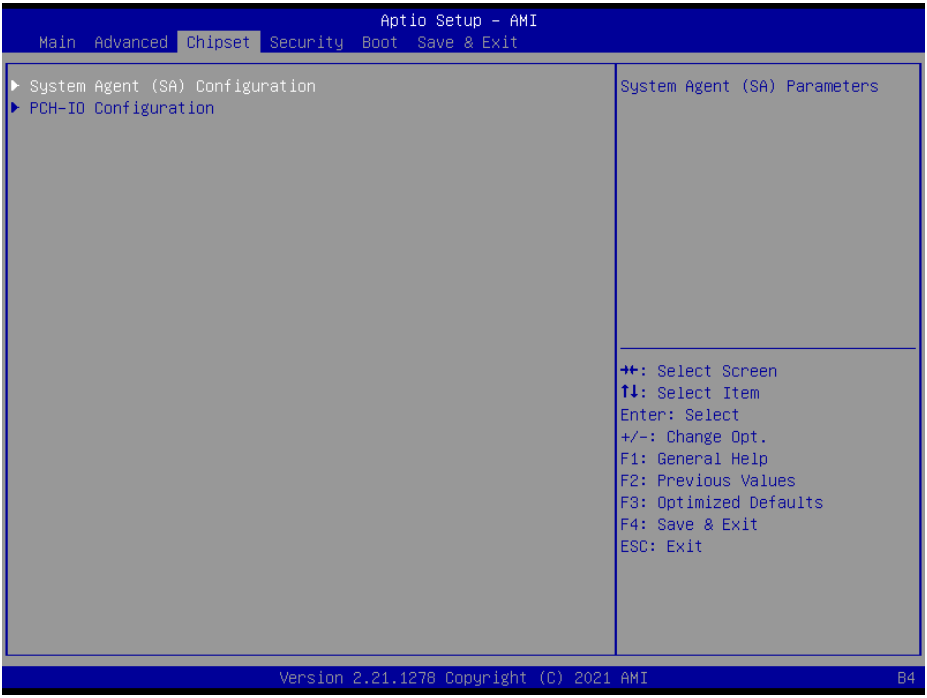
NVMe Configuration Screen

BIOS Setting	Options	Description/Purpose
NVMe Configuration	No changeable options	Displays NVMe device.

5.1.4 Chipset

Menu Path *Chipset*

This menu allows users to configure advanced Chipset settings such as System Agent (SA) and PCH-IO configuration parameters.

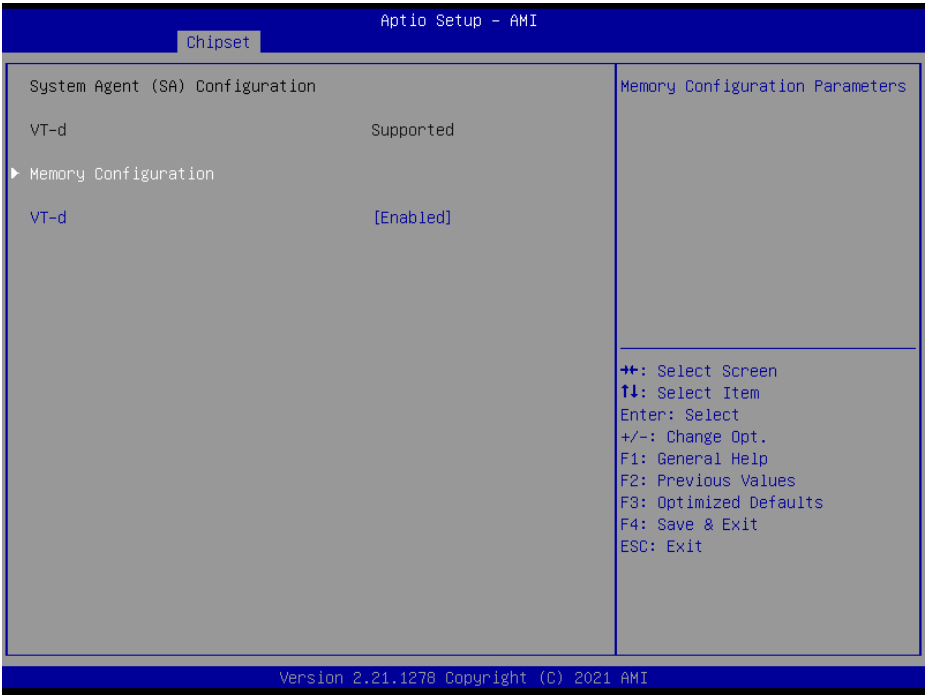


Chipset Menu Screen

BIOS Setting	Options	Description/Purpose
System Agent (SA) Parameters	Sub-Menu	Sets the Parameter for System Agent (SA) configuration.
PCH-IO Configuration	Sub-Menu	Sets the Parameter for PCH configuration.

5.1.4.1 System Agent (SA) Configuration

Menu Path *Chipset > System Agent (SA) Configuration*

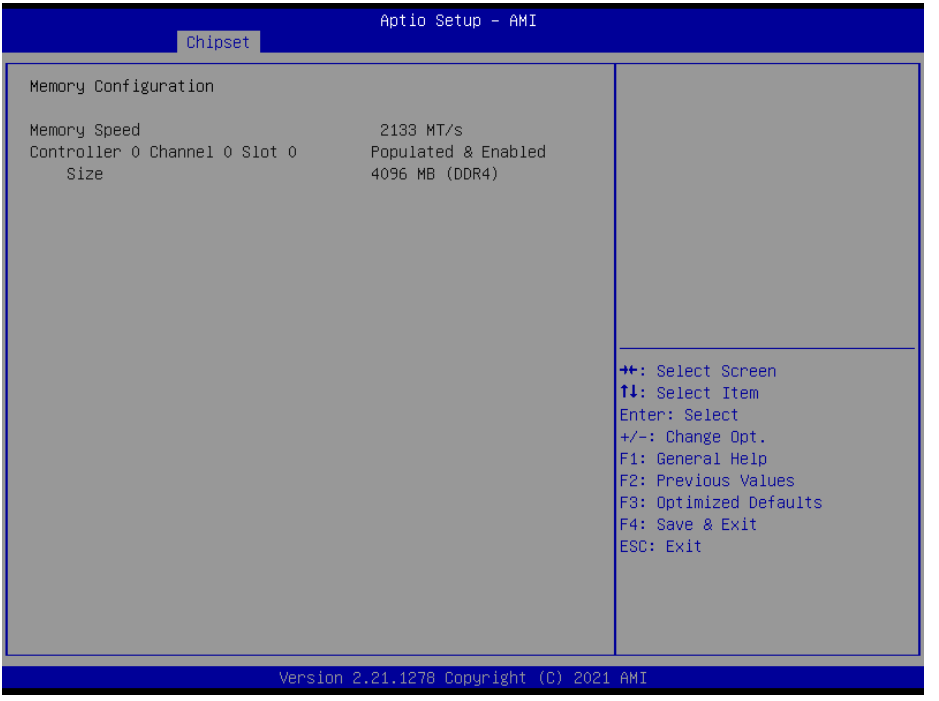


System Agent (SA) Configuration Screen

BIOS Setting	Options	Description/Purpose
Memory Configuration	Sub-Menu	Memory Configuration parameters
VT-d	- Disabled - Enabled (Default)	Enables or Disables VT-d function.

System Agent (SA) Configuration – Memory Configuration

Menu Path *Chipset > System Agent (SA) Configuration > Memory Configuration*



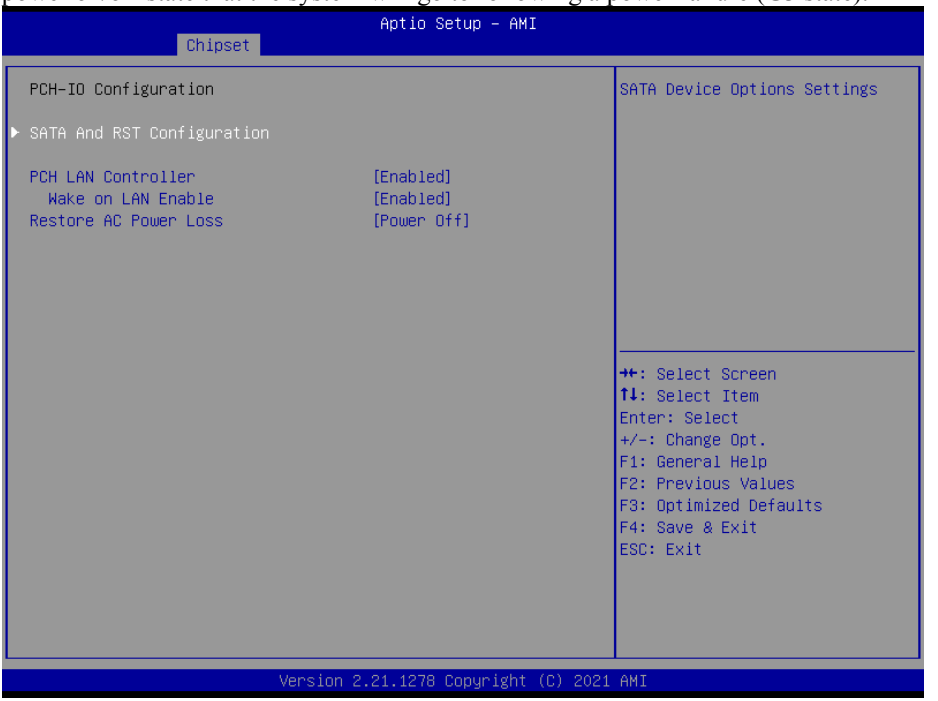
Memory Configuration Screen

BIOS Setting	Options	Description/Purpose
Memory Speed	No changeable options	Displays the Frequency of Memory.
Controller 0 Channel 0 Slot 0	No changeable options	Display the Controller 0 Channel 0 Slot 0 Subtitle.
Size	No changeable options	Displays the size of Controller 0 Channel 0 Slot 0.

5.1.4.2 PCH IO Configuration

Menu Path *Chipset > PCH IO Configuration*

The **PCH-IO Configuration** allows users to configure SATA and RST settings, enable/disable PCH LAN Controller and Wake-On-LAN function and determine the power on/off state that the system will go to following a power failure (G3 state).

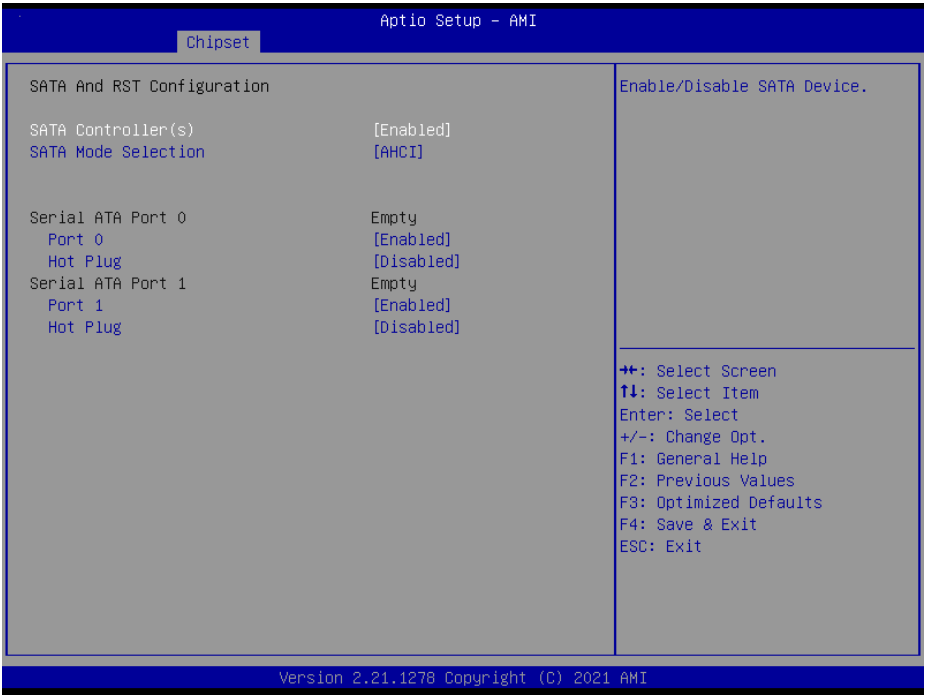


PCH-IO Configuration Screen

BIOS Setting	Options	Description/Purpose
SATA And RST Configuration	Sub-Menu	SATA and RST Configuration settings.
PCH LAN Controller	- Disabled - Enabled (Default)	Enables or Disables onboard NIC.
Wake On LAN Enable	- Disabled - Enabled (Default)	Enables or Disables integrated LAN to wake the system.
Restore AC Power Loss	- Power On - Power Off (Default)	Specifies what state to go to when power is re-applied following a power failure (G3 state).

PCH-IO Configuration – SATA And RST Configuration

Menu Path *Chipset > PCH-IO Configuration > SATA And RST Configuration*



SATA And RST Configuration Screen

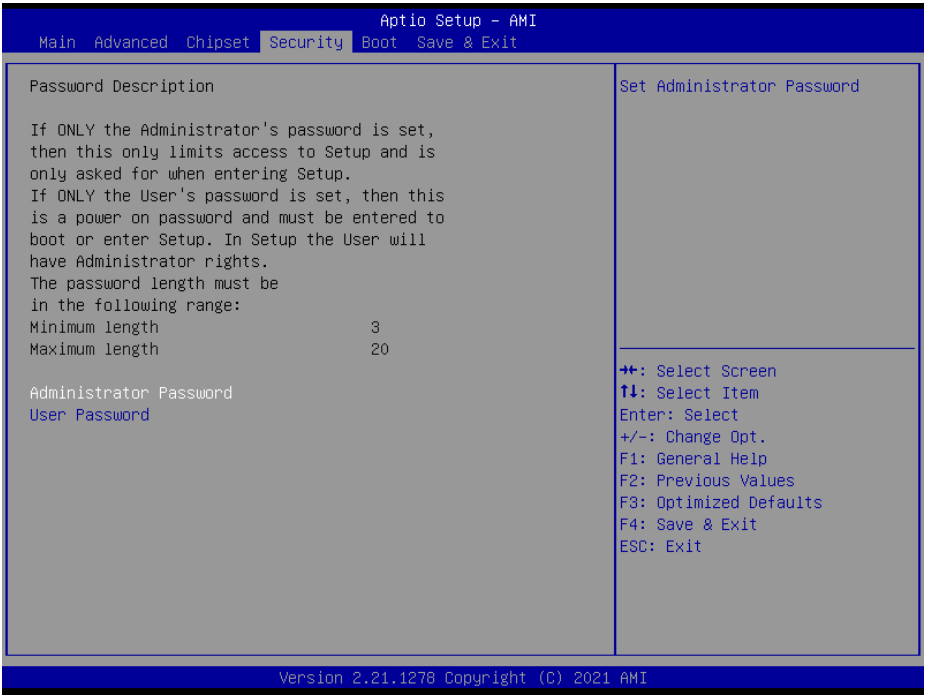
BIOS Setting	Options	Description/Purpose
SATA Controller(s)	- Disabled (Default) - Enabled	Enables or Disables SATA Device.
SATA Mode Selection	- AHCI (Default) - Intel RST Premium With Intel Optane System Acceleration (RAID)	Determines how SATA controller(s) operate.
Serial ATA Port 0 – 1	No changeable options	Displays the SATA device's name.
Port 0 - 1	- Disabled - Enabled (Default)	Enable or Disable SATA Port Device.
Hot Plug	- Disabled (Default) - Enabled	Enable or Disable SATA Port Device Hot Plug function.

5.1.5 Security

Menu Path *Security*

From the **Security** menu, you are allowed to create, change or clear the administrator password. You will be asked to enter the configured administrator password before you can access the Setup Utility.

By setting an administrator password, you will prevent other users from changing your BIOS settings. You can configure an Administrator password and then configure a user password. An administrator has much more privileges over the settings in the Setup utility than a user. Heed that a user password does not provide access to most of the features in the Setup utility.



Security Menu Screen

BIOS Setting	Options	Description/Purpose
Administrator Password	Password can be 3-20 alphanumeric characters.	Specifies the administrator password.
User Password	Password can be 3-20 alphanumeric characters.	Specifies the user password.

Create an Administrator or User Password

1. Select the **Administrator Password** / **User Password** option from the Security menu and press <Enter>, and the password dialog entry box appears.
2. Enter the password you want to create. A password can be 3-20 alphanumeric characters.
   After you have configured the password, press <Enter> to confirm.
3. Type the new password again and press <Enter>.

Change an Administrator or User Password

1. Select the **Administrator Password** / **User Password** option from the Security menu and press <Enter>, and the password dialog entry box appears.
2. Select the Administrator Password or User Password that you want to change. A password can be 3-20 alphanumeric characters. After you have changed the password, press <Enter> to confirm.
3. Type the changed password again and press <Enter>.

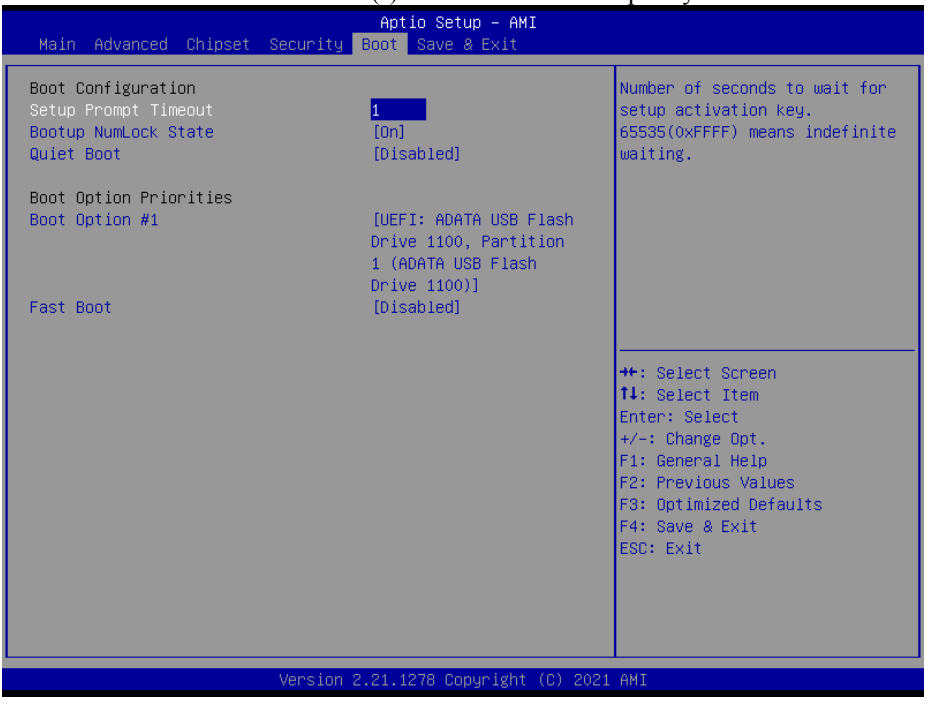
Remove an Administrator or User Password

1. Select the **Administrator Password** / **User Password** option from the Security menu and press <Enter>, and the password dialog entry box appears.
2. Select the configured Administrator Password or User Password that you want to delete.
   Leave the dialog box blank and press <Enter>.
3. Press <Enter> again when the password confirmation box appears.

5.1.6 Boot

Menu Path *Boot*

This menu provides control items for system boot configuration such as setting setup prompt timeout, enabling/disabling quiet boot and fast boot, changing the boot order from the available bootable device(s) and Screen Rotation policy.



Boot Menu Screen

BIOS Setting	Options	Description/Purpose
Setup Prompt Timeout	Numeric (from 1 to 65535)	Number of seconds to wait for setup activation key.
Bootup NumLock State	- On (Default) - Off	Selects the NumLock sate after the system is powered on. • **On:** Enable the NumLock function automatically after the system is powered on. • **Off:** Disable the NumLock function after the system is powered on.
Quiet Boot	- Disabled (Default) - Enabled	Enables or Disables Quiet Boot options.

BIOS Setting	Options	Description/Purpose
Fast Boot	- Disabled (Default) - Enabled	Enables or Disables Fast Boot options.
Boot Option #1~#n	- [Drive(s)] - Disabled	Sets the system boot order.

5.1.7 Save & Exit

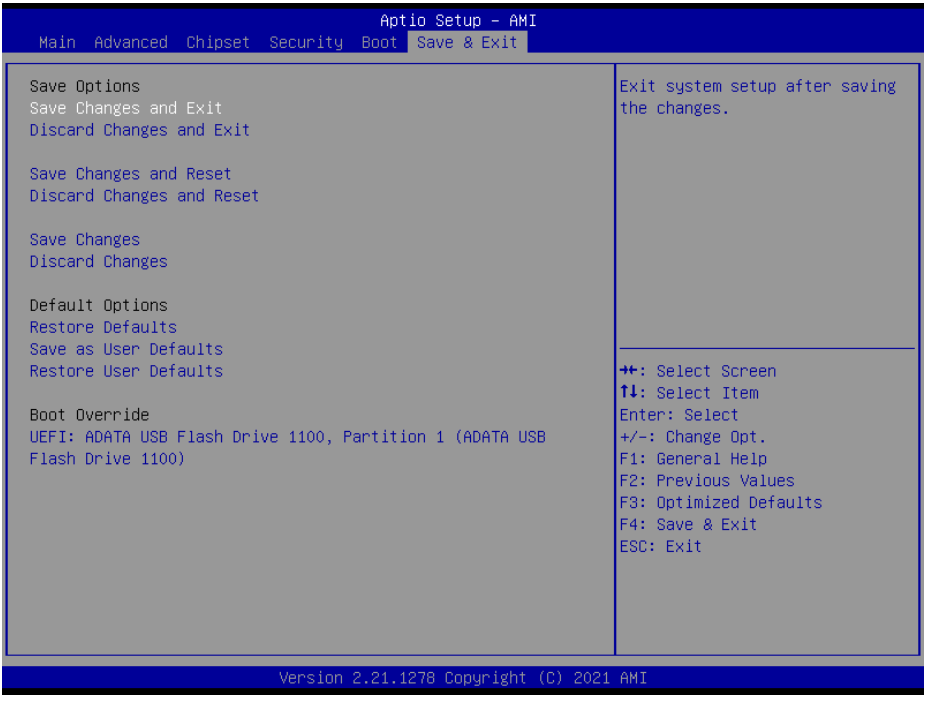
Menu Path *Save & Exit*

The **Save & Exit** allows users to save or discard changed BIOS settings as well as load factory default settings.

Save Changed BIOS Settings
To save and validate the changed BIOS settings, select **Save Changes** from the **Save & Exit** menu, or you can select **Save Changes and Exit** (or press **F4**) to validate the changes and then exit the system. Select **Save Changes and Reset** to validate the changed BIOS settings and then restart the system

Discard Changed BIOS Settings
To cancel the BIOS settings you have previously configured, select **Discard Changes and Exit** from this menu, or simply press **Esc** to exit the BIOS setup. You can also select **Discard Changes and Reset** to discard any changes you have made and restore the factory BIOS defaults.

Load User Defaults
You may simply press **F3** at any time to load the **Optimized Values** which resets all BIOS settings to the factory defaults.



Save & Exit Menu Screen

BIOS Setting	Options	Description/Purpose
Save Changes and Exit	No changeable options	Exits and saves the changes in NVRAM.
Discard Changes and Exit	No changeable options	Exits without saving any changes made in BIOS settings.
Save Changes and Reset	No changeable options	Saves the changes in NVRAM and resets.
Discard Changes and Reset	No changeable options	Resets without saving any changes made in BIOS settings.
Save Changes	No changeable options	Saves Changes done so far to any of the setup options.
Discard Changes	No changeable options	Discards Changes done so far to any of the setup options.
Restore Defaults	No changeable options	Loads the optimized defaults for BIOS settings.
Save as User Defaults	No changeable options	Saves the changes done so far as User Defaults.
Restore User Defaults	No changeable options	Restores the User Defaults to all the setup options.
Boot Override	- [Drive(s)]	Forces to boot from selected [drive(s)].

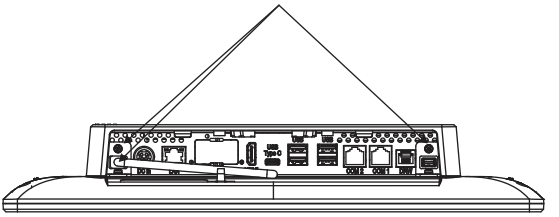
Appendix A System Diagrams

This appendix includes the easy maintenance diagrams, exploded diagrams of the system and the parts list as well as the part numbers of the PA-J500 system.

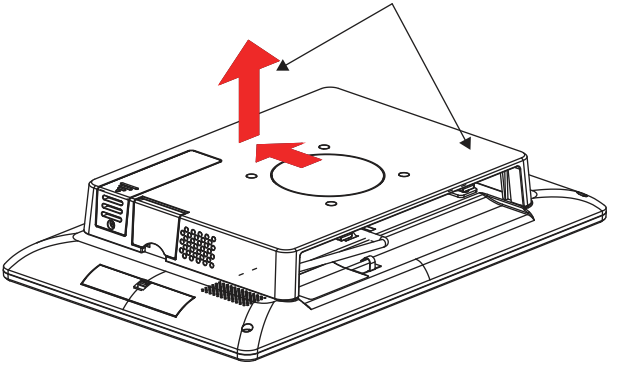
- PPC Memory Maintenance
- PPC M.2 2280 Maintenance
- PA-J500 Memory Maintenance
- PA-J500 M.2 2280 Maintenance
- How To Turn System Touchscreen
- 2nd Display Assembly
- VFD Module Assembly
- iButton Module Assembly
- Fingerprint Module Assembly
- Barcode Scanner Module Assembly
- MSR Module Assembly
- POS Type Assembly Exploded Diagram
- PPC Type Assembly Exploded Diagram

PPC Memory Maintenance

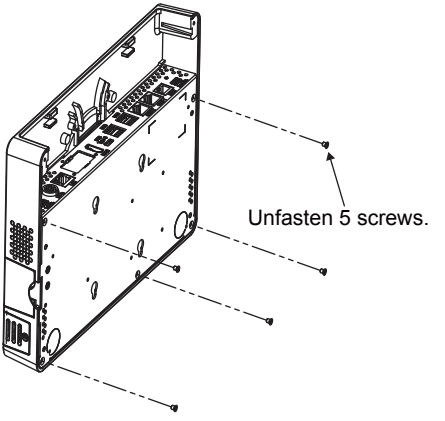
Step 1: Release the 2 screws and unplug the DP cable from the I/O Ports.



Step 2: Follow the directions (red arrows) below to separate the PCB Box from the touchscreen of Panel PC.

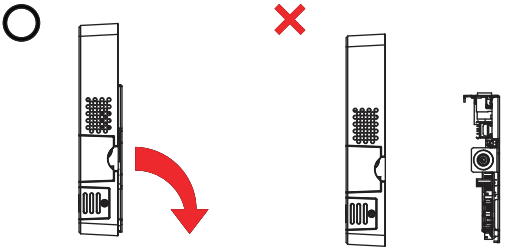


Step 3: Unfasten 5 screws as shown:



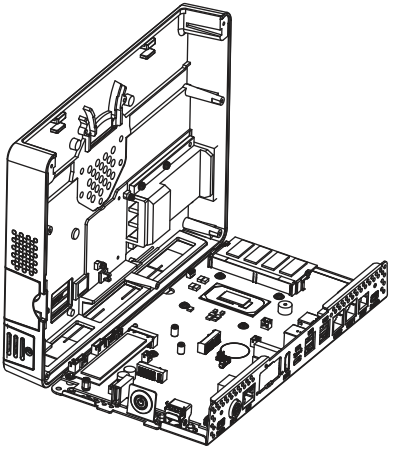
(continued on the next page)

Step 4: Move the PCB box outwards slightly as shown (red arrow) and lay the PCB box down on a flat surface.



Warning: If you force to move the PCB Box too far away from PPC, the connected cables inside could be damaged.

Step 5: Open the cover and unplug all the connected cables.

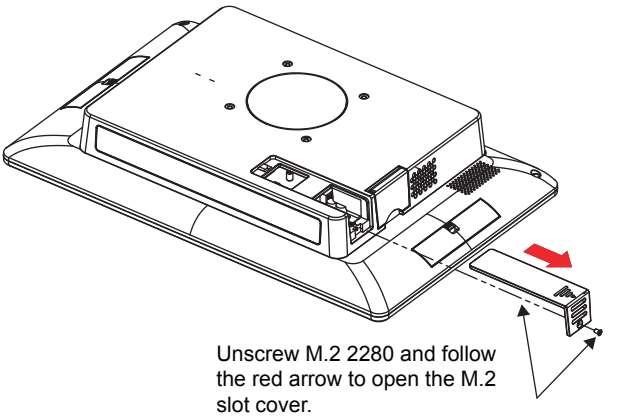


Step 6: Change the memory and heating pad.

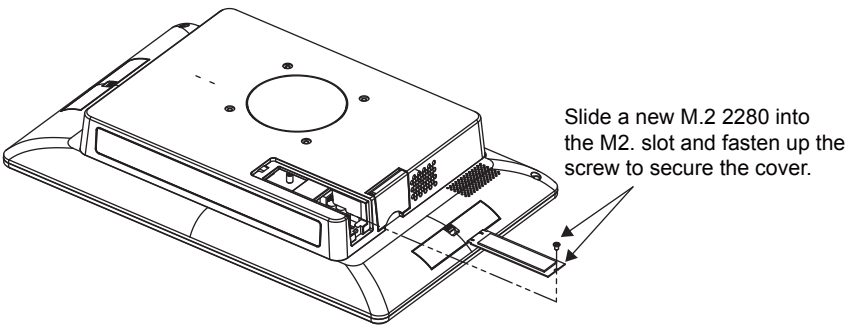
Step 7: Re-connect all the unplugged cables and replace all removed screws in the order you dismantled and complete.

PPC M.2 2280 Maintenance

Step 1: Unscrew M.2 2280 and follow the direction (red arrow) to release the cover.



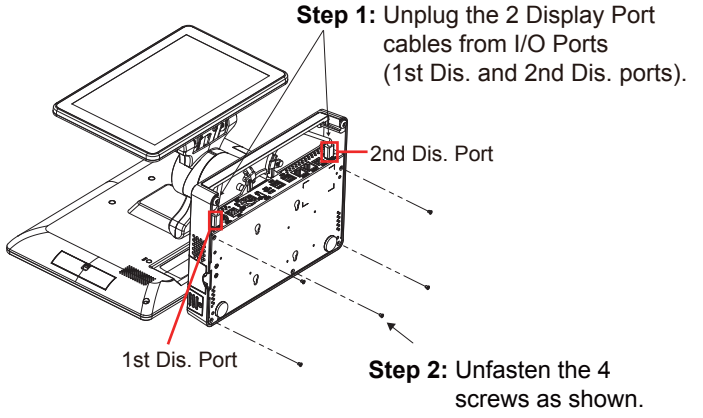
Step 2: Slide a new M.2 2280 into the M2. slot and fasten up the screw to secure the cover and complete.



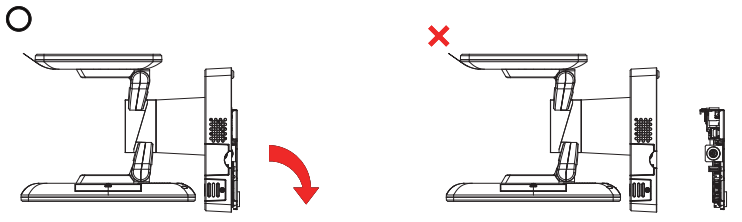
PA-J500 Memory Maintenance

Step 1: Unplug the 2 Display Port cables from I/O Ports (1st Dis. and 2nd Dis. ports).

Step 2: Unfasten the 4 screws as shown:

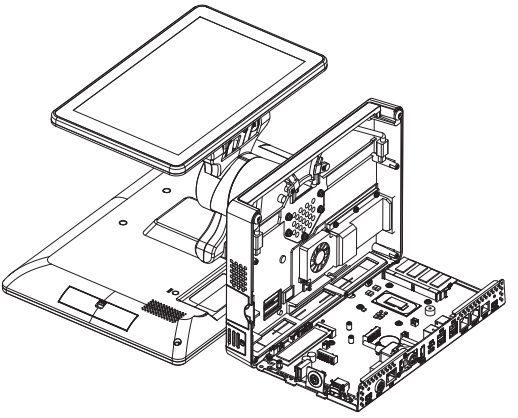


Step 3: Move the PCB box outwards slightly as shown (red arrow) and lay the PCB box down on a flat surface.



Warning: If you force to move the PCB Box too far away from the POS system, the connected cables inside the system could be damaged.

Step 4: Open the cover and unplug all the connected cables. (Remove the LED cable and Wi-Fi antenna if Wi-Fi function is available.)



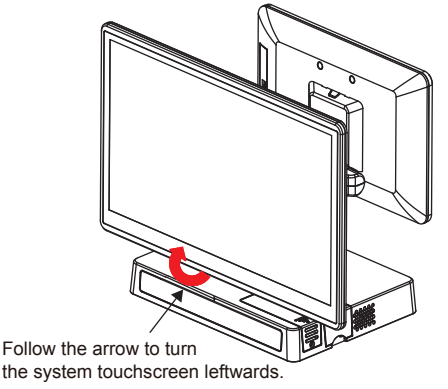
Step 5: Change the memory and heating pad.

Step 6: Re-connect all the unplugged cables and replace all removed screws in the order you dismantled.

The memory replacement has been finished.

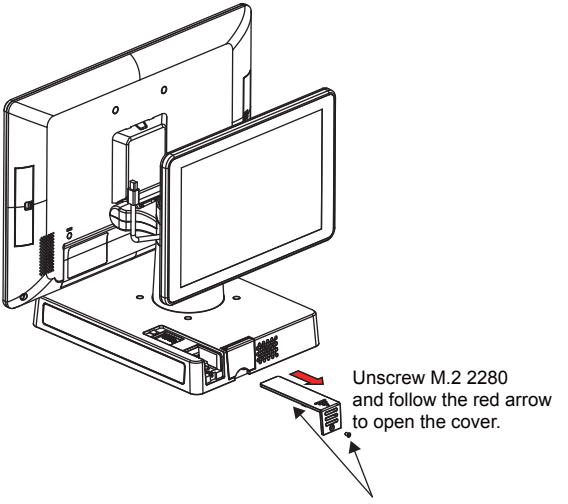
PA-J500 M.2 2280 Maintenance

Step 1: Follow the orange arrow to turn the system touchscreen leftwards.



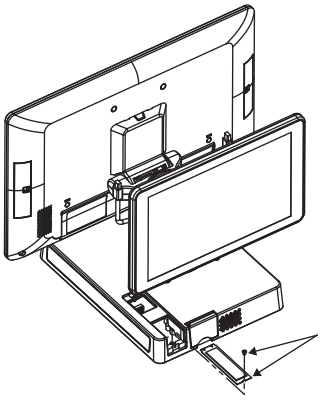
Note: Please refer to the **"How To Turn System Touchscreen"** section on the next page on how to turn the primary touchscreen properly.

Step 2: Unscrew M.2 2280 and follow the direction of red arrow (as shown) to release the cover.



(continued on the next page)

Step 3: Slide a new M.2 2280 into the M2. slot and fasten up the screw to secure the cover and complete.

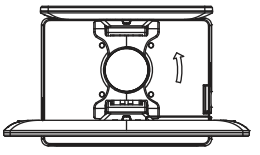


Slide a new M.2 2280 into the M2. slot and fasten up the screw to secure the cover.

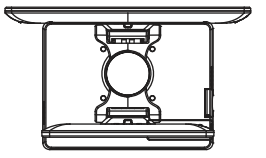
How To Turn System Touchscreen

You can turn the POS touchscreen either way. Heed that after you turn the primary touchscreen to the rear side, you must turn the primary touchscreen only in the direction you previously turned.

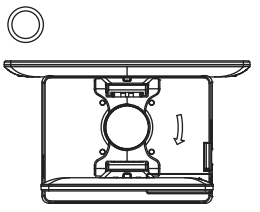
PA-J500 System Top View



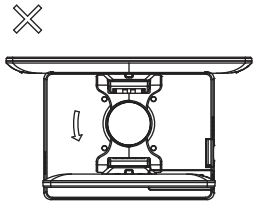
In this example, the primary touchscreen is to be turned leftwards.



The primary touchscreen has been turned as illustrated.



Important: Please turn the primary touchscreen only in the direction you previously turned.

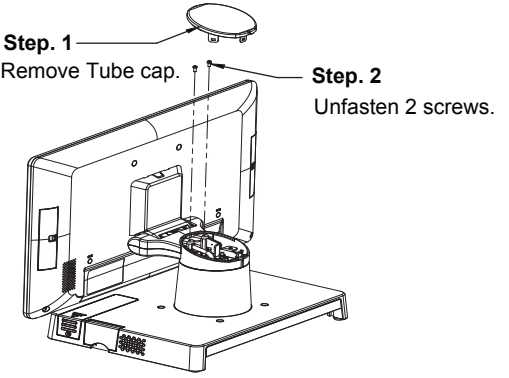


Warning: If you force to turn not in the direction you previously turned, the internal structure of the POS system could be damaged.

2nd Display Assembly

Step 1: Remove Tube Cap.

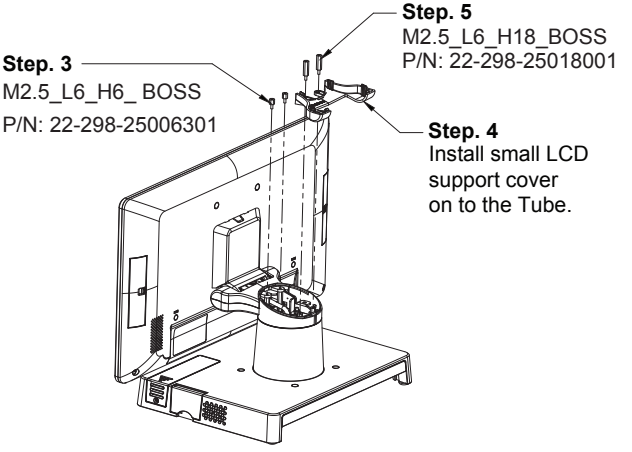
Step 2: Unfasten the 2 screws as shown:



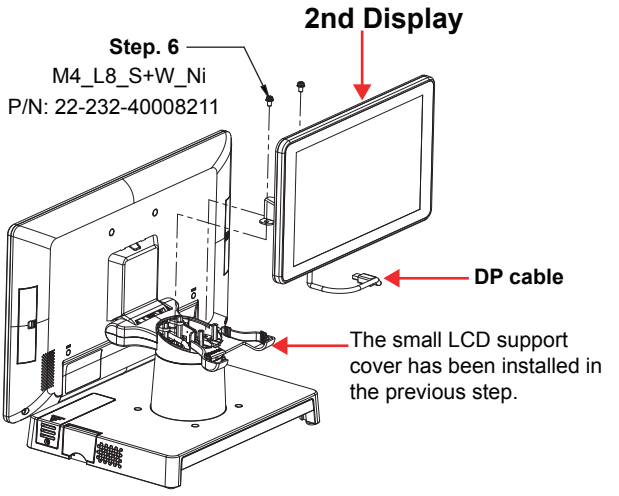
Step 3: Fasten 2 HEX CU BOSS (P/N: 22-298-25006301) as shown:

Step 4: Install the small LCD support cover onto Tube.

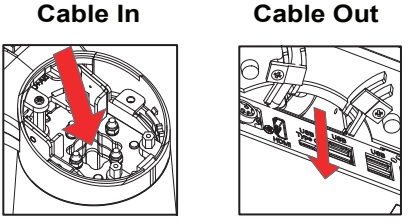
Step 5: Fasten the 2 HEX CU BOSS (P/N: 22-298-25018001) to secure the small LCD support cover onto the Tube.



Step 6: Fasten the 2 screws (P/N: 22-232-40008211) and install 2nd Display onto the back of PA-J500 Panel PC.



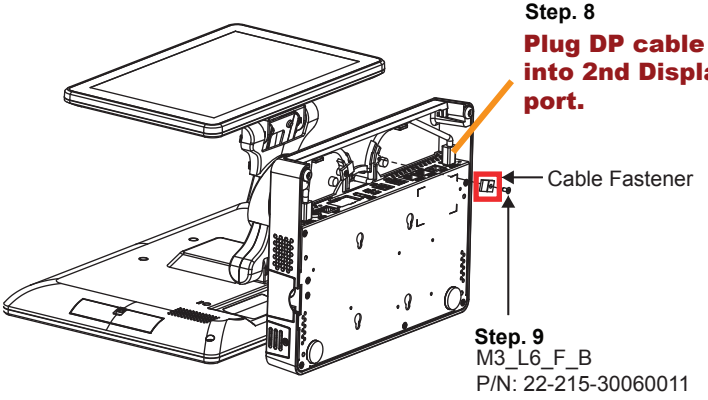
Step 7: Wire DP cable into the Tube as shown and out from the top side of rear I/O panel as illustrated below:



(continued on the next page)

Step 8: Plug DP cable into the 2nd Display port on the rear I/O panel as shown:

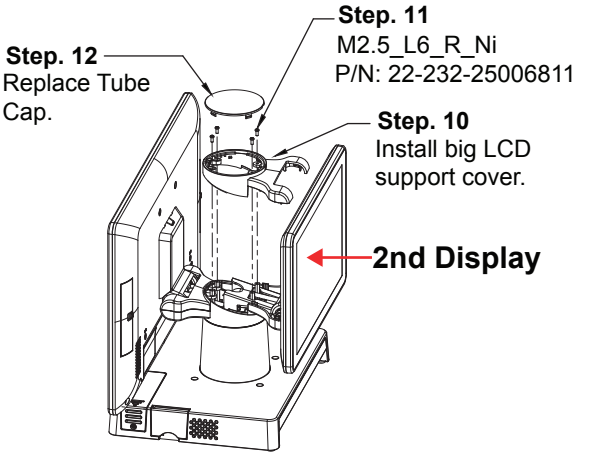
Step 9: Install the screw (P/N: 22-215-30060011) to attach the cable fastener.



Step 10: Install the big LCD small support cover onto the Tube.

Step 11: Fasten 4 screws (P/N: 22-232-25006811) to secure big LCD small support cover. Note 2 screws in Step 2 are used in this step.

Step 12: Replace Tube Cap to finish the 2nd Display assembly.

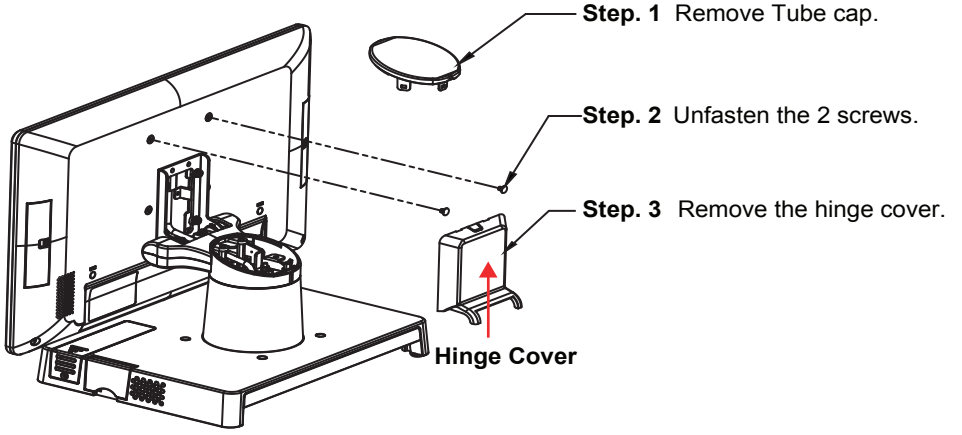


VFD Module Assembly

Step 1: Remove Tube Cap.

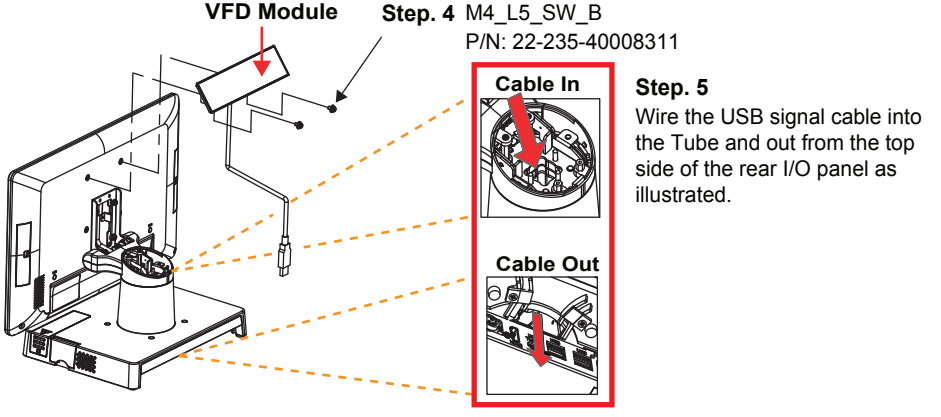
Step 2: Unfasten the 2 screws as shown:

Step 3: Remove the Hinge Cover.



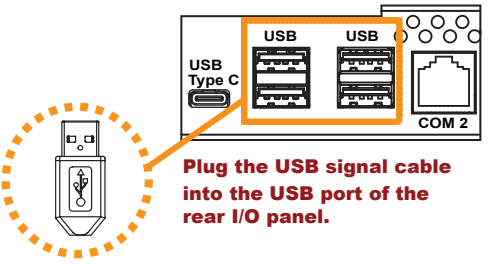
Step 4: Tighten 2 screws (P/N: 22-235-40008311) to fix VFD module onto the rear of Panel PC.

Step 5: Wire the USB signal cable into the Tube as shown and out from the top side of the rear I/O panel as illustrated below:

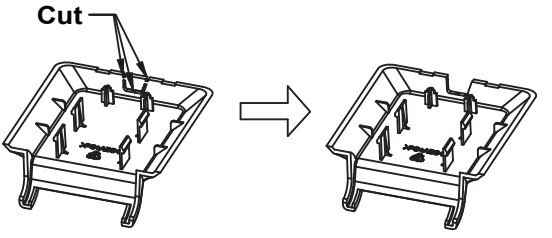


(continued on the next page)

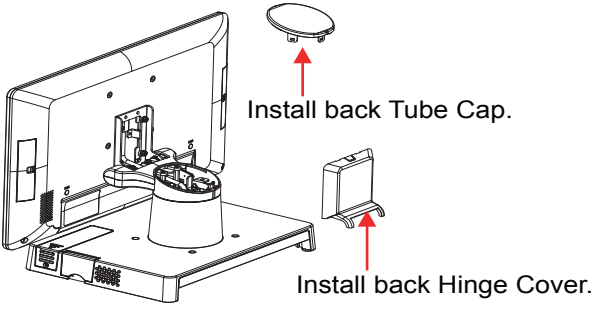
Step 6: Plug the USB signal cable into the USB port on the rear I/O panel as shown below:



Step 7: Cut the pieces of Hinge Cover as shown to allow the cable to wire through.

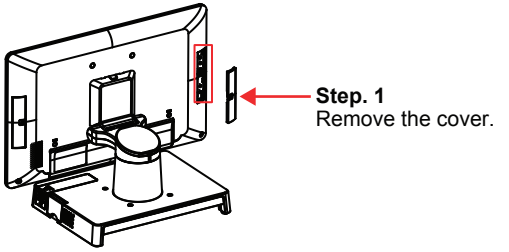


Step 8: Replace Tube Cap and Hinge Cover to finish the assembly.

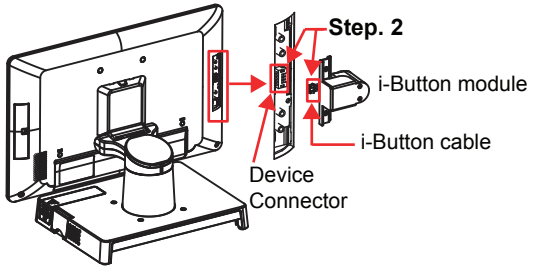


iButton Module Assembly

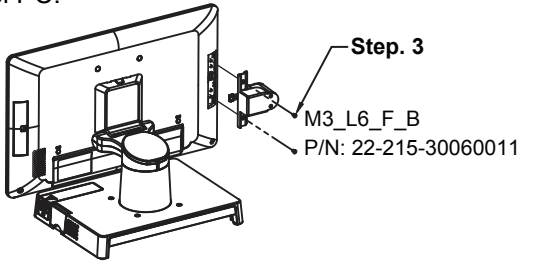
Step 1: Remove the Cover as shown:



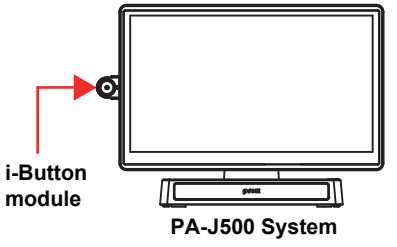
Step 2: Connect i-Button cable with the device connector as shown:



Step 3: Fasten 2 screws (P/N: 22-215-30060011) to secure i-Button device onto Panel PC.

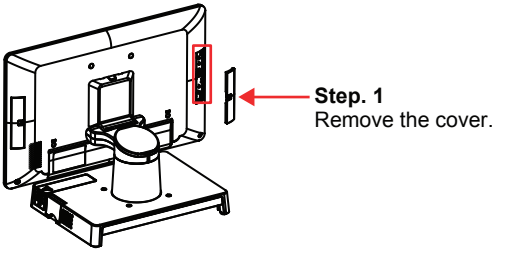


The i-Button module assembly has been finished as below:

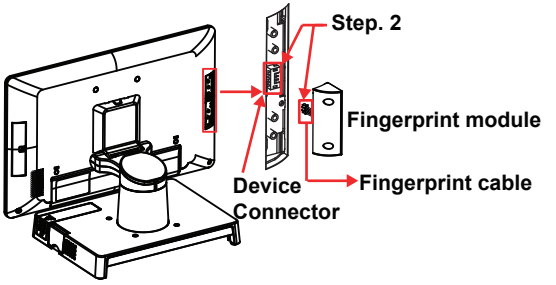


Fingerprint Module Assembly

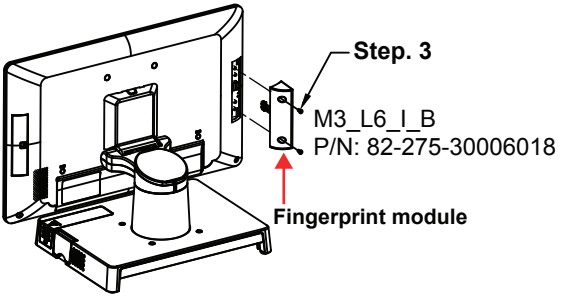
Step 1: Remove the Cover as shown:



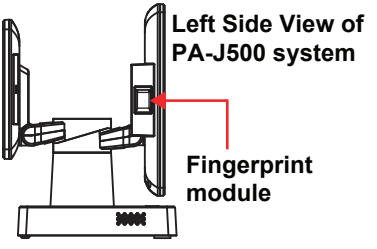
Step 2: Connect Fingerprint cable with the device connector as shown:



Step 3: Tighten 2 screws (P/N: 82-275-30006018) to secure Fingerprint module onto Panel PC.

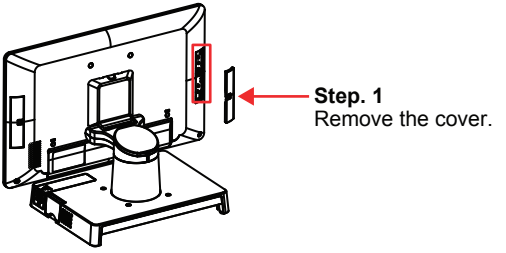


The Fingerprint module assembly has been finished as below:

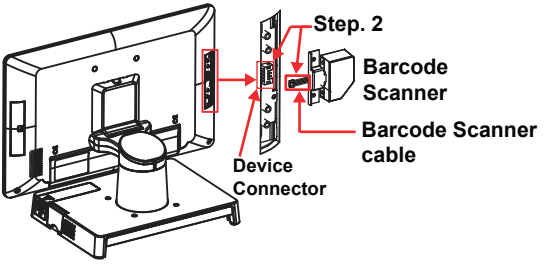


Barcode Scanner Assembly

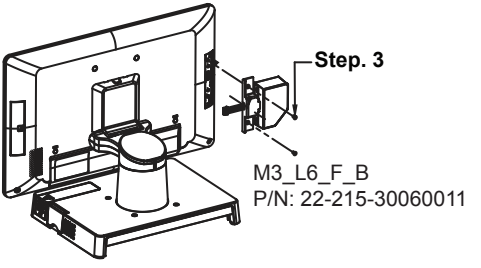
Step 1: Remove the Cover as shown:



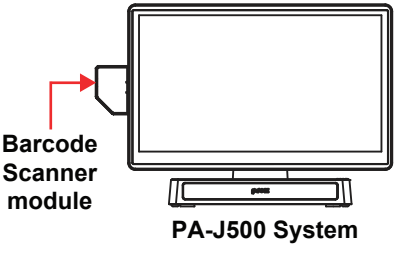
Step 2: Connect Barcode Scanner cable with the device connector as shown:



Step 3: Fasten 2 screws (P/N: 22-215-30060011) to secure Barcode Scanner onto Panel PC.

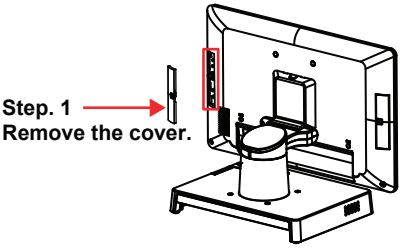


The Barcode Scanner assembly has been finished as below:

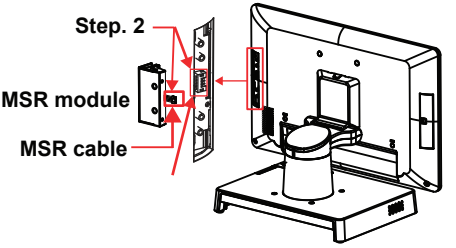


MSR Module Assembly

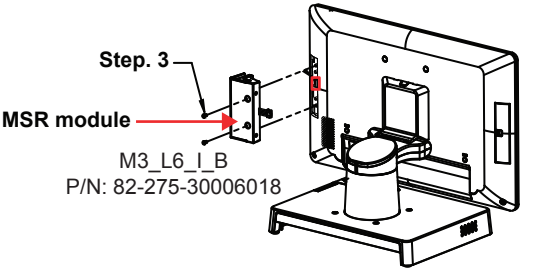
Step 1: Remove the Cover as shown:



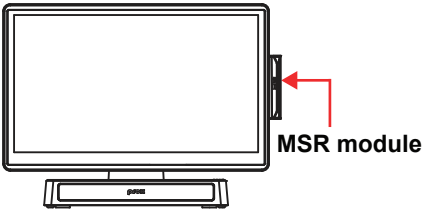
Step 2: Connect MSR cable with the device connector as shown:



Step 3: Tighten 2 screws (P/N: 82-275-30006018) to secure MSR module onto Panel PC.

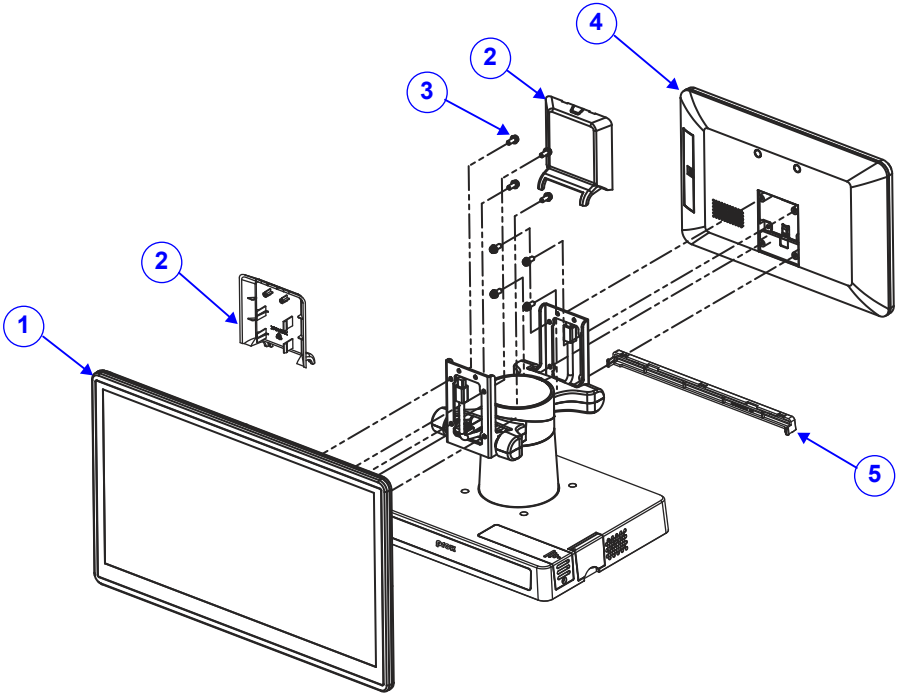


The MSR module assembly has been finished as below:



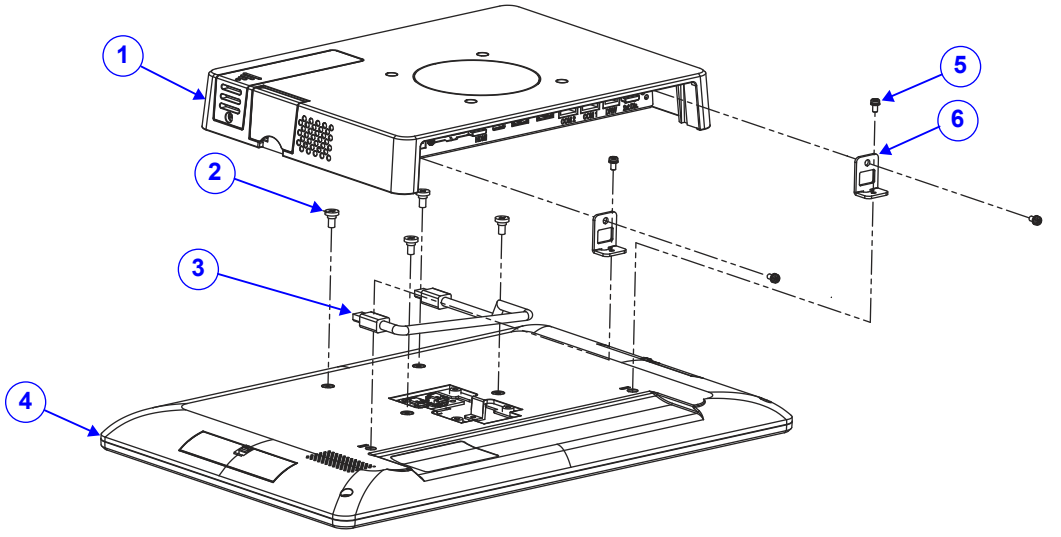
PA-J500 System

POS Type Assembly Exploded Diagram



No.	Component Name	P/N No.	Q'ty
1	15.6" LCD	N/A	1
2	PA-J500 Hinge Cover (Black)	30-002-12210514	2
3	Round Head With Spring Washer Screw #2 / M4x0.7Px10mm	22-232-40010011	13
4	PA-J200 2nd Display	N/A	1
5	PA-J500 Cable Cover (Black)	30-002-12110514	1

PPC Type Assembly Exploded Diagram



No.	Component Name	P/N No.	Q'ty
1	PA-J500 PPC Box ASM	N/A	1
2	Fillister Head Screw #2 / M4x0.7Px6mm	22-272-40006911	4
3	Mini DP Cable (L=270mm)	27-072-51405111	1
4	15.6" LCD	N/A	1
5	Round Head With Spring Washer Screw M3x0.5Px6mm	22-232-30060211	4
6	PA-J500 Box Fix	20-040-03002514	2

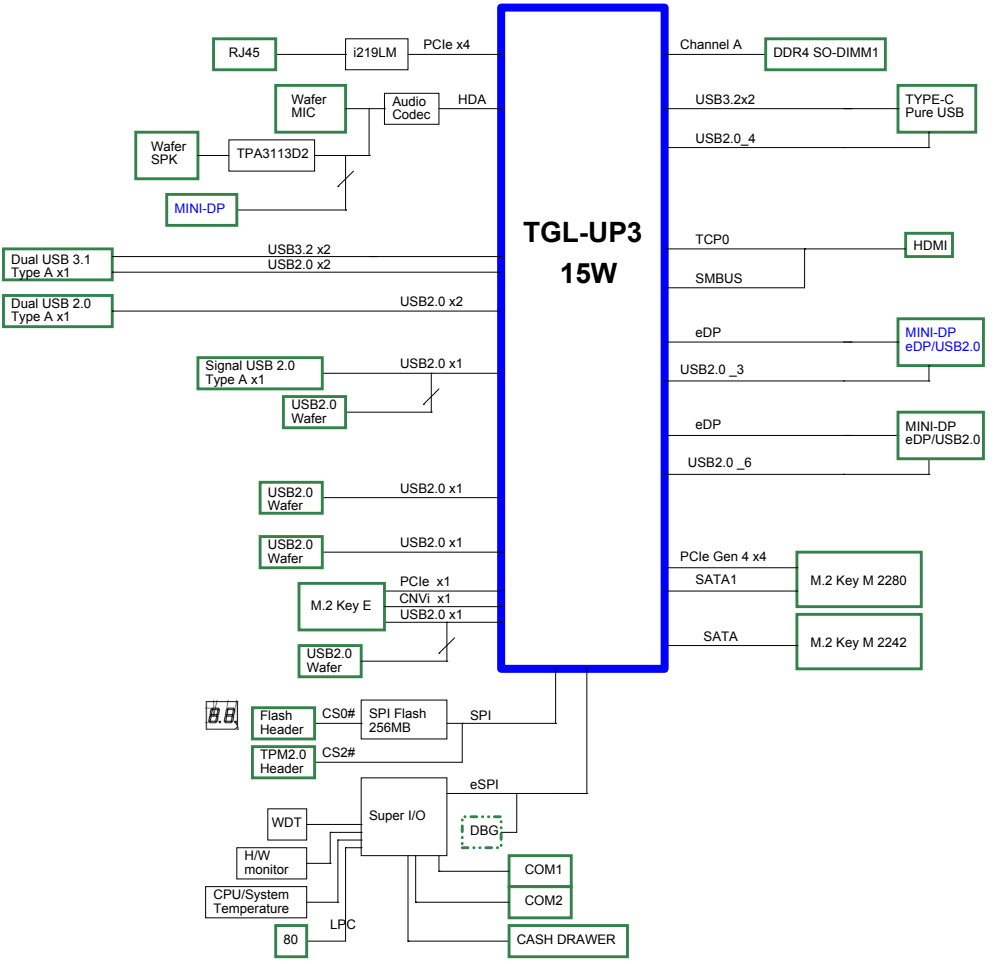
Appendix B Technical Summary

This appendix will give you a brief introduction of the allocation maps for the system resources.

The following topics are included:

- Block Diagram
- Interrupt Map
- I/O Map
- DMA Channels Map
- Memory Map
- Configuring WatchDog Timer
- Flash BIOS Update

Block Diagram



Interrupt Map

IRQ	Assignment
IRQ 0	System timer
IRQ 3	Communications Port (COM2)
IRQ 4	Communications Port (COM1)
IRQ 14	Intel(R) Serial IO GPIO Host Controller - INT34C5
IRQ 16	Intel(R) Serial IO UART Host Controller - A0A8
IRQ 16	High Definition Audio Controller
IRQ 17	USB Synopsys Controller
IRQ 18	Intel(R) Serial IO I2C Host Controller - A0D8
IRQ 37	Intel(R) Serial IO SPI Host Controller - A0AB
IRQ 54	Microsoft ACPI-Compliant System
IRQ 55	Microsoft ACPI-Compliant System
IRQ 56	Microsoft ACPI-Compliant System
IRQ 57	Microsoft ACPI-Compliant System

B-Configuring WatchDog Timer

The I/O port address of the watchdog timer is 2E (hex) and 2F (hex). 2E (hex) is the address port. 2F (hex) is the data port. User must first assign the address of register by writing address value into address port 2E (hex), then write/read data to/from the assigned register through data port 2F (hex).

Configuration Sequence

To program F81967 configuration registers, the following configuration sequence must be followed:

(1) Enter the extended function mode

To place the chip into the Extended Function Mode, two successive writes of 0x87 must be applied to Extended Function Enable Registers (EFERs, i.e. 2Eh or 4Eh).

(2) Configure the configuration registers

The chip selects the Logical Device and activates the desired Logical Devices through Extended Function Index Register (EFIR) and Extended Function Data Register (EFDR). The EFIR is located at the same address as the EFER, and the EFDR is located at address (EFIR+1). First, write the Logical Device Number (i.e. 0x07) to the EFIR and then write the number of the desired Logical Device to the EFDR. If accessing the Chip (Global) Control Registers, this step is not required. Secondly, write the address of the desired configuration register within the Logical Device to the EFIR and then write (or read) the desired configuration register through the EFDR.

(3) Exit the extended function mode

To exit the Extended Function Mode, writing 0xAA to the EFER is required. Once the chip exits the Extended Function Mode, it is in the normal running mode and is ready to enter the configuration mode.

Code example for watch dog timer

Enable watchdog timer and set timeout interval to 30 seconds.

```
; ------------------------ Enter to extended function mode ------------------------------
mov    dx,    2Eh
mov    al,    87h
out    dx,    al
out    dx,    al
; ----------------------- Select Logical Device 7 of watchdog timer --------------------
mov    al,    07h
out    dx,    al
inc    dx
mov    al,    07h
out    dx,    al
;--------------------------------Enable Watch dog feature ----------------------------
dec    dx
mov    al,    30h
out    dx,    al
inc    dx
mov    al,    01h
out    dx,    al
; ---------------- Set timeout interval as 30seconds and start counting --------------
dec    dx
mov    al,    F6h
out    dx,    al
inc    dx
mov    al,    1Eh
out    dx,    al
;------------------------------ Enable Watch PME-----------------------------------------
dec    dx
mov    al,    FAh
out    dx,    al
inc    dx
in     al,    dx
or     al,    51h
out    dx,    al
;------------------------- Set second as counting unit -----------------------------------
dec    dx
mov    al,    F5h
out    dx,    al
inc    dx
in     al,    dx
and    al,    DEh
out    dx,    al
;-------------------------- Start the watchdog timer ---------------------------------

Flash BIOS Update

I. Prerequisites

1 Prepare a bootable media (e.g. USB storage device) which can boot system to EFI Shell. Note: Copy UEFI Shell into the storage device under specific directory path. (/efi/boot/bootx64.efi)

2 Download and save the BIOS file (e.g. J5000PU1) to the storage device.

3 Copy AMI flash utility – AfuEfix64.efi (v5.14.01.0015) into the storage device. The utility and BIOS file should be saved to the same path.

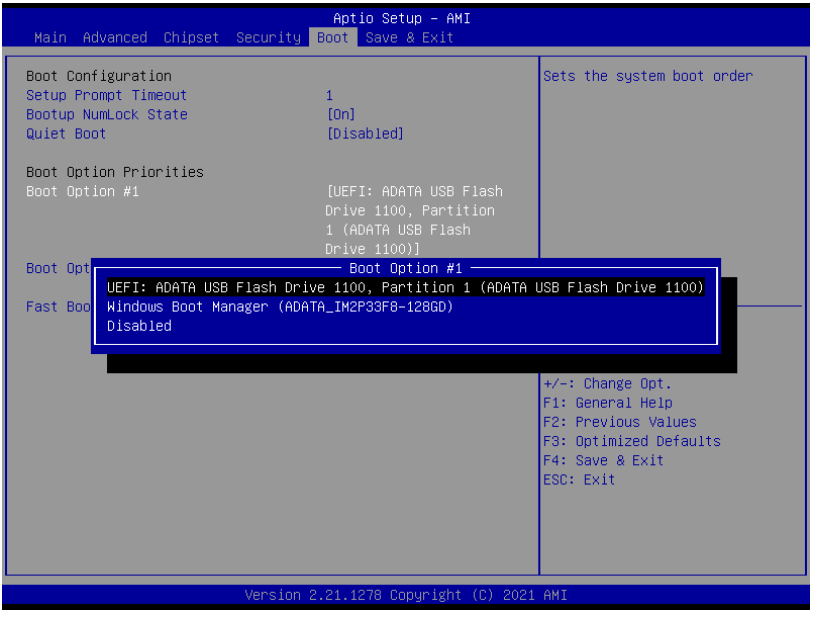
4 Make sure the target system can first boot to the bootable device.

(1) Connect the bootable USB device.

(2) Turn on the computer and press <**ESC**> or <**DEL**> key during boot to enter BIOS Setup.

(3) Select [**Boot**] menu and set the USB bootable device to be the 1st boot device.

(4) Press <**F4**> to save the configuration and exit the BIOS setup menu.



II. AFUEFIx64 Command for System BIOS Update

AFUEFIx64.efi is the AMI firmware update utility; the command line is shown as below:

AFUEFIx64 <ROM File Name> [option1] [option2]….
Users can type "AFUEFIx64 /?" to view the definition of each control option. The recommended options for BIOS ROM update include the following parameters:

/P: Program main BIOS image.
/B: Program Boot Block.
/N: Program NVRAM.
/X: Don't check ROM ID.

III. BIOS Update Procedure

1 Use the bootable USB storage to boot up system into the EFI Shell.

2 Type "**AfuEfix64 J500xxxx.bin /p /b /n /x"** and press enter to start the flash procedure. (xxxx means the BIOS revision part, e.g. 0PM1…)

3 During the update procedure, you will see the BIOS update process status and its execution percentage. Beware! Do not turn off the system power or reset your computer if the whole procedure are not complete yet, or it may crash the BIOS ROM and the system will be unable to boot up next time.

4 After the BIOS update procedure is completed, the following messages will be shown:

5 Restart the system and boot up with the new BIOS configurations.

6 The BIOS Update is completed after the system is restarted.

7 Reboot the system and verify if the BIOS version shown on the initialization screen has been updated.
